Civic employees showed practically no variation in the level of activity during March from the previous month, the 77 associations from which reports were tabulated, with 7,671 members, showing 7.4 per cent of idleness, compared with 7.5 per cent in February. There was some falling off in employment from March last year, however, when 5.5 per cent of the members reported were without work.

Conditions were slightly better for workers in the miscellaneous group of trades during March than in either the previous month or March, 1932, as shown by the reports received from 114 unions, combining a membership of 4,305 persons. Of these 899, or 20.9 per cent, were idle on the last day of the month, contrasted with percentages of 22.5 in February and 21.5 in March of last year. Stationary engineers and firemen were afforded a considerably better volume of work than in February and the situation for hotel and restaurant employees was somewhat better. A lower level of activity, however, was maintained by unclassified workers, theatre and stage employees and barbers. Stationary engineers and firemen, as in the previous comparison, reported noteworthy improvement from March of last year, the situation for barbers remaining much the

same, with a slight tendency in a favourable direction. Hotel and restaurant employees reported a substantial falling off in activity from March of last year and among theatre and stage employees also fair-sized recessions occurred. Declines, on a more moderate scale, were shown by unclassified workers.

The 2 unions of fishermen from which reports were tabulated in March, with 730 members, showed that 50, or 6.8 per cent, were without work on the last day of the month, contrasted with 13.2 per cent in February and a fully engaged situation in March last year.

From unions of lumber workers and loggers 4 reports were received in March, covering a membership of 665 persons and showing that 238, or a percentage of 35.8, were unemployed on the last day of the month, as compared with 31.4 per cent in February and 20.5 per cent in March a year ago.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1932, inclusive, and also the percentage of unemployment by provinces for March of each year from 1919 to 1930, inclusive, and for each month from January, 1931, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for March, 1933

During the month of March, 1933, the volume of business, as indicated by the average daily placements effected by the offices of the Employment Service of Canada, showed declines of nearly 16 per cent and 42 per cent, respectively, from that of the preceding month and also from the corresponding month of last year. Losses under the former comparison were registered in construction and maintenance, logging and mining, but these were partly offset by gains in services, farming, manufacturing, trade and transportation, increases in the last two groups being nominal only. In comparison with March a year ago, construction and maintenance was almost entirely responsible for the marked decline shown. This was the result of fewer men having been sent to highway camps during the month under review. Gains reported in farming and trade were nearly all counteracted by losses in manufacturing, services and logging.

The accompanying chart shows the trend of employment since January, 1931, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen

from the graph that there was little variation in the trend of the curves both of vacancies and placements in relation to applications throughout March, a small decline being shown in each during the first half of the month, followed by a slightly upward tendency during the latter half of the period, the greatest change in each instance throughout the entire month being only about 1 per cent. At the close of March, however, the level of each curve was about 14 points lower than that recorded at the end of the corresponding month last year. The ratio of vacancies to each 100 applications was 48.4 and 48.8 during the first and second half of March in contrast with ratios of 65.1 and 62.6 during the same periods in 1932. The ratios of placements to each 100 applications during the periods under review were 46.2 and 46.6, as compared with 63.3 and 60.8 during the corresponding month of 1932.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during March, 1933, was 838, as compared with 989 during the preceding month and with 1,411 in March, 1932.

The average number of applications for employment received daily by the offices during

the month under review was 1,724, in comparison with 1,914 in February and with 2,211 during March last year.

The average number of placements made daily by the offices of the Service during March, 1933, was 801, of which 379 were in regular employment and 422 in work of one week's duration or less, as compared with a total daily average of 948 during the preceding month. Placements in March a year ago averaged 1,371 daily, consisting of 429 placements in regular and 942 in casual employment.

| Year                 | Placements |         |         |
|----------------------|------------|---------|---------|
|                      | Regular    | Casual  | Total   |
| 1923.....            | 347,165    | 115,387 | 462,552 |
| 1924.....            | 247,425    | 118,707 | 366,132 |

#### POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o—o—o—o—o—o

During the month of March, 1933, the offices of the Service referred 23,096 persons to vacancies and effected a total of 21,604 placements. Of these, the placements in regular employment were 10,233, of which 6,882 were of men and 3,351 of women, while placements in casual work totalled 11,371. The number of vacancies reported by employers was 16,060 for men and 6,553 for women, a total of 22,613, while applications for work numbered 46,534, of which 34,752 were from men and 11,782 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1923, to date:

#### NOVA SCOTIA

During March orders received at employment offices in Nova Scotia called for nearly 84 per cent fewer workers than in the preceding month but nearly 4 per cent more than during the corresponding month of last year. There was a loss of over 84 per cent in placements when compared with February, but a gain of nearly 5 per cent in comparison with March, 1932. The gain in placements over March of last year was due to work provided in relief of unemployment on road and sewer construction, as construction and maintenance was the only group in which an increase was reported. Of the losses in other

## REPORT OF THE EMPLOYMENT OFFICES FOR THE MONTH OF MARCH, 1933

| Offices                       | Vacancies              |                           | Applicants               |                       |         |        |                           | Regular placements same period 1932 |

\* 311 placements effected by offices since closed.

divisions, none of which were important, those in services and trade were the largest. Nearly all placements were in construction and maintenance and services, there being 347 in the former and 311 in the latter. Of the persons placed in the services group, 222 were of household workers. During the month 50 men and 48 women were placed in regular employment.

#### NEW BRUNSWICK

Orders listed at employment offices in New Brunswick called for nearly 21 per cent fewer workers than in the preceding month, and almost 2 per cent less than during the corresponding month of last year. Declines also were reported in placements, there being nearly 22 per cent less than in February and over 3 per cent fewer than in March, 1932. There were small changes only in the number of placements effected in each industrial group, when compared with March of last year, farming and transportation showing gains and manufacturing, services and trade, losses. Placements in construction and maintenance numbered 86 and in services 410. Of the latter, 307 were of household workers. During the month regular employment was found for 40 men and 54 women.

#### QUEBEC

Opportunities for employment, as indicated by orders received at employment offices in the Province of Quebec during March, were over 12 per cent better than in the preceding month and 30 per cent above the corresponding month of last year. There was a gain, also, in placements of nearly 17 per cent when compared with February and of nearly 15 per cent in comparison with March, 1932. Increased placements in services, trade, manufacturing, and logging accounted for the gain over March of last year, offset in part by losses in construction and maintenance. Placements by industrial divisions included: manufacturing, 142; logging, 47; construction and maintenance, 167; trade, 101; and services, 1,315, of which 1,147 were of household workers. There were 418 men and 977 women placed in regular employment during the month.

#### ONTARIO

There was an increase of 10 per cent in the number of positions offered through employment offices in Ontario during March, when compared with the preceding month, but a loss of nearly 51 per cent in comparison with the corresponding month of last year. Similar percentages of change were recorded in placements under both comparisons. The large

decline in placements from March of last year was almost entirely due to fewer workers being sent to relief camps on highway construction. There were, in addition, losses in manufacturing, services, and logging, but these decreases were largely offset by gains in farming and trade. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 284; logging, 285; farming, 501; construction and maintenance, 4,343; trade, 375; and services, 2,962, of which 1,580 were of household workers. Placements in regular employment numbered 2,385 of men and 1,094 of women.

#### MANITOBA

Employment opportunities, as indicated by orders received at offices in Manitoba during March, were over 15 per cent greater than in the preceding month, but nearly 41 per cent less than during the corresponding month of last year. There was a gain of nearly 19 per cent in placements when compared with February, but a loss of over 39 per cent in comparison with March, 1932. A large decrease in the number of workers placed on highway construction, with smaller losses in services and farming, accounted for the adverse change from March of last year. Placements in other groups remained on about the same level as in March, 1932. Placements by industrial divisions included: manufacturing, 24; logging, 20; farming, 963; construction and maintenance, 692; trade, 53; and services, 699, of which 537 were of household workers. During the month 1,529 men and 353 women were placed in regular employment.

#### SASKATCHEWAN

During the month of March, positions offered through employment offices in Saskatchewan were nearly 5 per cent less than in the preceding month, but almost 3 per cent more than during the corresponding month last year. There was a loss of over 8 per cent in placements when compared with February, but a gain of over 4 per cent in comparison with March, 1932. The increase in placements over March of last year was due to positions secured for many workers under the Farm Relief plan. This gain was partly offset by declines in construction and maintenance, trade, services, and transportation. Placements by industrial groups included: manufacturing, 36; farming, 687; construction and maintenance, 479; trade, 42; and services, 624, of which 464 were of household workers. There were 791 men and 385 women placed in regular employment during the month.

## ALBERTA

There was an increase of over 14 per cent in the number of positions offered through employment offices in Alberta during March, when compared with the preceding month, but a loss of nearly 58 per cent in comparison with the corresponding month of last year. Placements also were nearly 17 per cent higher than in February, but nearly 58 per cent below March, 1932. There was a considerable reduction in the number of workers placed on highway construction during the month under review, when compared with the corresponding month of last year, which accounted for the decline under this comparison. Losses were, however, also shown in the services group, but farm and bush placements increased. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 23; logging, 96; farming, 690; construction and maintenance, 546; and services, 415, of which 332 were of household workers. Placements in regular employment numbered 899 of men and 271 of women.

## BRITISH COLUMBIA

The demand for workers, as indicated by orders received at employment offices in British Columbia during March, was nearly 47 per cent greater than in the preceding month and nearly 13 per cent above the corresponding month of last year. Fractionally smaller percentages of gain were recorded in placements under both comparisons. Increased placements in services and construction and maintenance were responsible for the gain over March of last year, and mining also showed improvement. Minor declines were reported in farming and logging. Placements by industrial divisions included: manufacturing, 21; farming, 68; mining, 26; construction and maintenance, 2,620; trade, 23; and services, 829, of which 354 were of household workers. There were 770 men and 169 women placed in regular employment during the month.

## Movement of Labour

During the month of March, 1933, the offices of the Employment Service of Canada made 10,233 placements in regular employment, 4,868 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 120 were granted the Employment Service reduced transportation rate, 108 going to centres within the same province as the despatching office, and 12 to other provinces. The reduced transportation rate which is 2·7 cents per mile with a mini-

mum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Ontario offices granted 32 certificates at reduced transportation rate during March, all provincial. Of these, 30 were issued to bushmen, Port Arthur despatching 23, Fort William 5, and Sudbury 2 to situations within their respective zones. In addition, the Port Arthur zone was the destination of 2 miners travelling from Timmins. Manitoba transfers at the reduced rate in March numbered 33, of which 22 were to provincial points and 11 outside the province. The former were effected by the Winnipeg office, 16 farm hands and 4 farm household workers proceeding from this centre to employment at various points throughout the province, 1 hotel cook going to Brandon and 1 hotel kitchen girl to a point within the Winnipeg zone. Of the workers shipped outside the province, 10 secured their certificates at the Winnipeg office for transportation to Port Arthur, including 5 bush workers, 3 tractor operators and 2 institutional cooks. The one remaining transfer was of a farm hand journeying from St. Boniface to Estevan. In Saskatchewan 3 persons benefited by the Employment Service reduced transportation rate during March, these going to provincial situations. From Saskatoon 1 teacher was sent to Swift Current and 1 farm hand to North Battleford, while the Regina office effected the transfer of 1 teacher to a point within its own zone. Certificates issued by Alberta offices during March were 28 in number, 27 provincial and 1 interprovincial. The latter was granted to a farm hand travelling from Edmonton to the Saskatoon zone. Included in the provincial labour movement were 2 farm hands going to Drumheller, and 12 farm hands, 2 farm domestics, 8 loggers, and 1 hotel cook to employment at centres within the Edmonton zone. From Calgary 1 farm hand was conveyed to Drumheller and 1 town housekeeper to Edmonton. Business transacted by British Columbia offices in March involved an issue of 24 reduced rate certificates, all provincial. The Vancouver office was instrumental in the transfer of 19 mine workers and 2 farm hands within its own zone, and of 2 sawmill workers to Kamloops. In addition, 1 mine cook proceeded from Nelson to Penticton.

Of the 120 persons who were carried at the Employment Service reduced transportation rate during March 57 journeyed over the Canadian National Railways, 38 over the Canadian Pacific Railway, 21 over the Pacific Great Eastern Railway, 2 over the Northern Alberta Railway, and 2 over the Temiskaming and Northern Ontario Railway.

#### (4) Building Permits issued in Canada during March, 1933

According to returns tabulated by the Dominion Bureau of Statistics, the value of the building permits issued by 61 cities during March was \$934,555; this was an increase of \$26,649 or 2·9 per cent over the February total of \$907,906, but a decrease of \$2,462,174 or 72·5 per cent, as compared with the aggregate of \$3,396,729 reported for the same month in 1932. Building costs, as shown by the Bureau's index number of wholesale prices of building materials, were, however, lower than in 1932 and in any other year since 1920.

Some 50 cities furnished detailed statistics, showing that they had granted nearly 115 permits for dwellings valued at almost \$245,000 and some 950 permits for other buildings estimated to cost approximately \$580,000. In addition, two centres reported that they had authorized engineering projects valued at approximately \$7,500. In February, authority was given for the erection of some 80 dwell-

ings and nearly 590 other buildings, estimated to involve expenditures of approximately \$291,000 and \$575,000, respectively, while an engineering project, valued at \$10,000, was also reported.

Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan and Alberta reported increases in the value of the building authorized during March as compared with the preceding month. The greatest gains were those of \$45,195 or 152·7 per cent in Nova Scotia and \$22,810 or 268·4 per cent in Manitoba. British Columbia alone showed a decline of \$109,233 or 44·2 per cent.

As compared with March, 1932, Nova Scotia and New Brunswick recorded increases; of the reductions, the largest was that of \$1,344,339 or 77·7 per cent in Ontario.

Of the larger cities, Toronto and Winnipeg registered a gain as compared with the preceding month, but a falling-off as compared

\*Revised figures.

The aggregate value of the building permits issued in the first quarter of 1933 was less than in the same period in any of the years since 1920, but, as already stated, the wholesale prices of building materials have this year been considerably lower than in the same period in any of the last twelve years.

with March of last year. Montreal and Vancouver showed declines in both comparisons.

Of the smaller centres, Chatham, Fort William, Fredericton, Halifax, Kamloops, Kitchener, Moncton, Niagara Falls, Owen Sound, Saint John, St. Thomas and Westmount, reported higher totals than in either February, 1933, or March, 1932.

#### *Cumulative Record for First Quarter, 1933.*

—The following table gives the value of the building authorized by 61 cities during March and in the first quarter of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index number of wholesale prices of building materials in the first quarter of the same years are also given (1926=100).

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, April, 1933, summarized the employment situation as follows:—

Employment at March 20 showed a further improvement, which extended to most industries. The seasonal improvement continued in building, public works contracting, brick, tile, artificial stone, concrete and cement manufacture, in stone and slate quarrying, and in the clothing industries. There was also an improvement in engineering, shipbuilding and ship-repairing, iron and steel and tinplate manufacture, in the vehicle, metal goods, woollen and worsted, carpet, silk and artificial silk, boot and shoe, furniture, woodworking, pottery and rubber industries, and in the distributive trades.

On the other hand there was a decline in coal mining, in the cotton and hosiery industries, and in dock and harbour service.

There was a substantial reduction in the numbers of insured persons unemployed in all parts of the country except Wales and North-west England. The improvement was most marked in London and the southeastern counties, where employment was moderate. In Southwest England and the Midlands it was slack, while in all other areas it was still bad.

Among the workpeople, numbering approximately 12,808,000, insured against unemploy-

ment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at March 20, 1933 (including those temporarily stopped as well as those wholly unemployed), was 22.0, as compared with 22.8 at February 20, 1933, and with 20.8 at March 21, 1932. The percentage wholly unemployed at March 20, 1933, was 18.0, as compared with 18.7 at February 20, 1933, while the percentage temporarily stopped was 4.0, as compared with 4.1. For males alone, the percentage at March 20, 1933, was 25.1, and for females, 13.8; at February 20, 1933, the corresponding percentages were 26.0 and 14.1.

At March 20, 1933, the number of persons on the registers of Employment Exchanges in Great Britain was 2,170,252 wholly unemployed, 503,377 temporarily stopped, and 102,555 normally in casual employment, making a total of 2,776,184. This was 80,454 less than a month before, but 208,852 more than a year before. The total included 2,230,211 men, 68,252 boys, 423,083 women and 54,638 girls.

The persons on the registers included 1,203,382 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years; (b) had received less than 156 days' benefit in their current benefit years; and (c) if 156 days' benefit had become payable in a

previous benefit year ending on or after November 12, 1931, had paid at least ten contributions since the 156th day of benefit); 1,167,226 insured persons with applications for transitional payments; 260,736 insured persons not in receipt of insurance benefit or transitional payments, and 144,840 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the registers of Employment Exchanges at March 20, 1933, was 2,850,903.

### United States

The Bureau of Labour Statistics of the United States Department of Labour tabulate monthly statistics of employment and pay-rolls based on reports from establishments in 17 major industrial groups. According to the Bureau's statistics, a comparison of the index of employment in manufacturing industries in March, 1933 (55.1), with the February employment index (57.5), shows a decrease in employment of 4.2 per cent over the month interval. The March, 1933, index of pay-rolls (33.4) shows a decline of 8.2 per cent compared with the February pay-roll index of 36.4. A comparison of the employment indexes in March, 1933, and March, 1932, shows a decrease of 14.6 per cent in employment over the year interval, while the index of pay-rolls in March, 1933, is 30.7 per cent below the level of the corresponding month of the previous year.

The decreases in employment and pay-rolls between February and March, 1933, can be attributed very largely to the bank holiday which caused a general curtailment of manufacturing activities during the early part of March. A slightly offsetting influence in these general decreases was reflected in the increase in employment and pay-rolls in the beverage industry, in anticipation of beer legislation.

The changes in employment and pay-rolls in March, 1933, are based on reports supplied by 18,107 establishments in 89 of the principal manufacturing industries of the United States. These establishments reported 2,471,792 employees on their pay-rolls whose combined weekly earnings were \$38,921,474. The employment reports received from these co-operating establishments cover approximately 50 per cent of the total number of wage earners in all manufacturing industries of the country.

The decreases in employment and pay-rolls between February and March, 1933, are contrary to the usual February-March trends. While decreases in employment and pay-rolls

between these two months have been reported in a few instances since 1923, the average change in employment between February and March over the preceding ten-year interval has been an increase of 0.4 per cent and the average increase in pay-rolls has been 1.2 per cent.

The indexes of both employment and pay-rolls dropped to new low levels in March, 1933, the employment index falling 0.2 per cent below the low point of July, 1932, and the pay-roll index dropping 6.7 per cent below the low point of January, 1933.

Two of the 16 groups of non-manufacturing industries showed gains in both employment and pay-rolls over the month interval, the building construction industry reporting an increase of 0.2 per cent in employment and 3.3 per cent in pay-rolls, and the quarrying and non-metallic mining industry reporting an increase of 0.9 per cent in employment and 2.1 per cent in pay-rolls. These two industries normally show improvement in March, as does the dyeing and cleaning industry, which reported an increase of 0.4 per cent in employment coupled, however, with a decrease of 3.3 per cent in weekly earnings. The crude petroleum producing and the power and light industries reported increases in pay-rolls of 2.0 per cent and 0.3 per cent, respectively, coupled with small losses in employment. In the remaining 11 industries, decreases in both employment and pay-rolls were reported. The greatest decrease in employment over the month interval (7.1 per cent in the anthracite mining industry) was a seasonal decline as was the drop of 2.5 per cent in the bituminous mining industry. Both of these coal mining industries reported pronounced decreases in pay-roll from February to March due to reduced operating time. The canning and preserving industry reported a loss of 5.3 per cent during this between-season period and the metalliferous mining industry reported a decrease of 4.8 per cent. Retail trade establishments reported 2.7 per cent fewer employees in March than in the preceding month, the hotel and laundry industries reported decreases in employment of 1.8 per cent each, and the wholesale trade industry reported a decrease of 1.4 per cent. In the remaining four industries in which decreased employment and pay-rolls were reported, the decreases in employment were 1 per cent or less.

According to a recent statement by Mr. William Green, president of the American Federation of Labor, the Federation's estimate of unemployment (based on Government figures) in the United States during the month of March "was well over 13,000,000."

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the

district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed thereby by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his

satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the

contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" condition clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, those included under the "A" groups containing either fair wages schedules as shown below, or the General Fair Wages Clause above men-

tioned, and those coming under the "B" group containing the Fair Wages Clause specified in the "B" Conditions as given above:—

### Royal Canadian Mounted Police

#### *Contract in Group "A" (Construction, etc.)*

Construction of a 60-foot Police Patrol Boat, Sorel, P.Q. Name of contractor, The Manseau Shipyard, Sorel, P.Q. Date of contract, April 20, 1933. Amount of contract, approximately \$45,000. The General Fair Wage Clause was inserted in the contract.

### Post Office Department

Following is a statement of payments made in April, 1933, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

| Nature of Orders   | Amount    |
|--|-----------|
| Making metal dating stamps and type, brass crown seals, cancellors, etc.<br>Pritchard-Andrews Co. of Ottawa,<br>Ltd. . . . . | \$ 533 93 |
| Making and repairing rubber stamps, daters, etc<br>Pritchard-Andrews Co. of Ottawa,<br>Ltd. . . . .                          | 99 28     |

### Fair Wages Conditions in Harbour Commission Contracts

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" Conditions, shall, as far as practicable, be observed by the department or departments of the Government of Canada in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance, loan or guarantee for any of the purposes mentioned. Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commissioners throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and include either the General Fair Wages Clause or a fair wages schedule.

The Department of Labour was recently notified that the following contract was executed by the New Westminster Harbour Commissioners under the above-mentioned conditions:

#### New Westminster Harbour Commissioners

Rock and gravel fill to protect North end, Revetment Wall of Fraser River Elevator, New Westminster, B.C. Name of contractors, Fraser River Pile Driving Company Limited, New Westminster, B.C. Date of contract,

April 25, 1933. Amount of contract, \$3,866. A fair wage schedule was inserted in the contract as follows:—

| Trade or class of labour           | Rates of wages not less than | Hours of labour not more than |
|------------------------------------|------------------------------|-------------------------------|
|                                    | per hour                     | per day                       |
| Pile driver foreman.....           | \$1 12½                      | 8                             |
| Pile driver engineer.....          | 1 00                         | 8                             |
| Pile drivers.....                  | 0 90                         | 8                             |
| Derrick engineer.....              | 1 00                         | 8                             |
| Derrick men.....                   | 0 90                         | 8                             |
| Fireman.....                       | 0 65                         | 8                             |
| Bridge, wharf and dock builders... | 0 90                         | 8                             |
| Common labourers.....              | 0 45                         | 8                             |

The general executive board of the International Ladies' Garment Workers' Union, at a meeting held at New York during April, resolved that the union should undertake the raising of a million dollar "war chest" for the purpose of a campaign to effect complete unionization of the dressmaking industry. The fund is to be raised by an assessment on the membership and will be all paid in by June, when new agreements are due to be negotiated between the union and employers. Although the union hopes that the industry can be organized and wages and conditions stabilized without stoppage of work, plans of the campaign include a general strike, if necessary.

## AGREEMENT AS TO WAGES AND WORKING CONDITIONS FOR COAL MINERS IN THE DRUMHELLER DISTRICT OF THE RED DEER VALLEY, ALBERTA

**A**N agreement between the United Mine Workers of America, District 18, and certain coal mining operating companies was signed on April 8, 1933, as a result of negotiations between the parties with the assistance of Mr. F. E. Harrison, western representative of the Department of Labour.

The operators had proposed certain wage reductions owing to the decrease in the prices of coal and the settlement provides for reductions of twelve and one-half per cent in contract rates of wages, that is per ton, yard, etc., and approximately ten per cent for men on day rates. In 1932 a Board of Conciliation and Investigation under the Industrial Disputes Act had recommended certain wage adjustments, but the parties agreed to continue until March 31, 1933, without change under the wage scales in effect since 1928 and 1929 in the various mines.

The agreement is between the District 18 of the United Mine Workers of America and the Midland Coal Mining Company, Limited, Midlandvale; the Newcastle Coal Company Limited, Drumheller; Alberta Block Coal Company, Limited, Drumheller; Jewel Collieries, Limited, Wayne; Thomas Coal Company, Limited, Nacmine; and the Western Gem Coal Company, Limited, Drumheller, to be in effect from April 1, 1933, to March 31, 1935, subject to termination on March 31, 1934, on thirty days' notice by either party, the contract to be deemed an individual contract of the various mines for this purpose.

The clauses of the agreement as to working conditions are substantially the same as those in previous agreements which have been generally in effect throughout the large mines in Alberta since 1920 when adopted by agreement between the Western Coal Operators' Association and the union. In 1925 mine operators on the one hand gave up membership in the association and miners, on the other hand, in the union, outside of the Red Deer Valley and signed local agreements between individual operators and committees of employees or local unions, on somewhat lower wage scales than that of the union. A number of these local organizations later became affiliated with the Mine Worker's Union of Canada. Most of such agreements, however, contain the same clauses as to working conditions as the district agreement. The text of that between the Canadian Pacific Railway Company, Galt Mines, Lethbridge, and the Mine Workers Union of Lethbridge was

printed in the LABOUR GAZETTE for July, 1928, page 693, as an appendix to the report of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act.

The clauses of the present agreement, as formerly, provide for the right of the management to hire and discharge employees but also that all employees eligible shall be members of the union. The check-off is provided for, that is the deduction of union dues from wages by the employer for transfer to the union, on the written authorization of the individual miners. The clauses regarding the settlement of disputes provide that in the event of failure of agreement between the Pit Committee and the foremen, superintendent or management, and again between the district union officers and the management, they shall appoint an independent chairman whose decision shall be final, and if the two parties cannot agree on an independent chairman, the Minister of Labour shall be called upon to appoint him. It is also provided that pending settlement of a dispute there shall be no cessation of work.

Provision is made for pit committees and the performance of their duties, the exclusion of foremen, etc., from the terms of the agreement, the duties of checkweighmen, preference of employment for employees according to seniority, holidays, and funerals. In case of suspension of mining the maintenance men are to continue work and care for the property, and mine any coal required for keeping up steam but not for sale. Overtime is to be paid for at the scale rate per hour but to be eliminated on Sundays and holidays as far as possible.

The day rates for certain classes are as follows: machine miners, electric, \$6.30; hand miner, \$5; hoisting engineer, \$5.24; drivers and brattice-men, \$5; pumpmen and underground labourers, \$4.20; surface labourers, \$4; machinists, \$4.63-\$5.20; carpenters and blacksmiths, \$5.20; all for an eight hour day.

During April a total of 2,310 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 7 of which were fatal cases; in Schedule 2 industries, 118 were reported, including 4 fatal cases; and 230 Crown, 4 of which were fatal were reported during the month, making in all 2,658, of which 15 were fatal.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Construction: Buildings and Structures

TORONTO, ONTARIO.—SHEET METAL CONTRACTORS AND THE INTERNATIONAL ASSOCIATION OF SHEET METAL WORKERS, LOCAL No. 30.

Agreement to be in effect from May 1, 1933, to April 30, 1934. Previous agreements were summarized in the LABOUR GAZETTE December, 1931, page 1356, and August, 1929, page 926. The agreement in effect from January 1, 1932, to April 30, 1933, provided for the same terms as in 1931 except for the introduction of the 40-hour week (unless permission to work on Saturday mornings is given by the union) and for a wage rate of 95 cents per hour from January 1, 1932, to April 30, 1932, and of 90 cents from May 1, 1932, to April 30, 1933. The new agreement for the period May 1, 1933, to April 30, 1934, is the same as for 1932 with the following exception:

Wages for sheet metal workers: 75 cents per hour.

### Transportation and Public Utilities: Electricity and Gas

WINNIPEG, MANITOBA.—WINNIPEG ELECTRIC COMPANY AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCALS Nos. 1037 AND 435.

Agreement to be in effect from February 1, 1933, to January 31, 1936.

The previous agreement was summarized in the LABOUR GAZETTE, March, 1932, page 348, and provided for reductions in wages of 10 per cent for some employees and of 7 per cent for others from the wage scale contained in it.

The new agreement which came into effect February 1, 1933, provides for a reduction of 15 per cent from the same standard rates, one-half of which reduction is to be restored in one year and the other half in two years if conditions warrant such restoration. If they do not, the wage scale is to be determined by joint conference or mutual agreement. In other

respects the 1933 agreement is similar to the previous one with an additional clause granting free transportation on the street railway to all employees.

### Transportation and Public Utilities: Water Transportation

VANCOUVER, B.C.—THE SHIPPING FEDERATION OF BRITISH COLUMBIA AND THE VANCOUVER AND DISTRICT WATERFRONT WORKERS' ASSOCIATION.

The agreement which is in effect from November 1, 1930, to November 1, 1933, was summarized in the LABOUR GAZETTE, March, 1931, page 349. Under its terms the "Rules, Working Conditions and Wage Schedule" may be amended by mutual agreement and an amendment was noted in the LABOUR GAZETTE, December, 1932, page 1339. The wage schedule has again been changed from March 6, 1933, to provide for a further reduction of 7 cents per hour for straight time work and proportionate decreases for overtime, making the regular rates 75 cents per hour on ships and 71 cents per hour on docks for straight time, with \$1.12 per hour for overtime on ships and \$1.07 for overtime on docks.

### Dust Explosions in Factories

The Factory Department of the Home Office (England and Wales) recently issued a memorandum on Dust Explosions in Factories. "While there is general recognition of the serious consequences which arise from the ignition of mixtures of air and inflammable gases or vapours," it is pointed out, "the possibility of explosions resulting from the ignition of mixtures of air and certain dusts is far less generally appreciated. Such explosions are, however, by no means rare and have caused serious loss of life and personal injury and enormous damage to buildings and plant. More than 80 dust explosions have come to the notice of the Factory Department, and these have been spread over a fairly wide range of industries. They have usually arisen from the ignition of clouds of carbonaceous dust, but certain metallic dusts are also liable to cause explosions. Nearly half have arisen from the dust of grain and seeds, flour and malt, but explosions have also been caused by dust from coal, briquettes and pitch, wood and cork, sulphur, dextrine and sugar, dyestuffs and chemical compounds, magnesium and aluminium, rubber and ebonite, shoddy and rags. Many were due to easily preventable causes."

The pamphlet makes a number of recommendations, including precautions to be taken against the formation of dust clouds and against ignition, methods of limiting the damage done by explosions, etc.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, APRIL, 1933

### Cost of Living, Prices of Staple Articles and Index Numbers

**T**HE cost of the weekly family budget in terms of retail prices was somewhat higher during the month due to an advance in the cost of foods, while the Dominion Bureau of Statistics index number of wholesale prices was again considerably higher due mainly to advanced prices for grains, livestock, sugar, and non-ferrous metals.

In retail prices the cost per week of a list of twenty-nine staple foods in terms of the average retail prices in sixty-nine cities was \$6.83 for April as compared with \$6.67 for March; \$7.22 for April, 1932; \$8.86 for April, 1931; \$11.24 for April, 1930; \$11.36 for April, 1926; \$10.26 for April, 1922; \$16.92 for June, 1920 (the peak); and \$7.51 for April, 1914. Of the twenty-nine items in the food budget nineteen showed advances, the most important of which occurred in the prices of sugar, mutton, fresh and salt pork, bacon, lard and butter. The prices of eggs, milk, rice and potatoes were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$15.74 at the beginning of April as compared with \$15.59 for March; \$17.09 for April, 1932; \$19.18 for April, 1931; \$21.53 for April, 1930; \$21.64 for April, 1926; \$20.66 for April, 1922; \$26.92 for July, 1920 (the peak); and \$14.32 for April, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was considerably higher at 65.4 for April as compared with 64.4 for March; 68.2 for April, 1932; 73.9 for April, 1931; 91.2 for April, 1930; 94.5 for April, 1929; 101.2 for April, 1926; 98.4 for April, 1922; 164.3 for May, 1920 (the peak); and 64.0 for April, 1914. One hundred and two prices quotations were higher, sixty-eight were lower and three hundred and thirty-two were unchanged.

In the classification according to chief component materials three of the eight main groups were higher, four were lower and one was unchanged. The groups which advanced were: the Vegetables and Vegetable Products group, due mainly to higher prices for grains, milled products and sugar; the Animals and their Products group because of higher prices for live stock, hides, lard and fresh and cured meats, which more than offset declines in the prices of furs and eggs; and the Non-Ferrous Metals and their Products group, due to increased quotations for antimony, copper, silver, tin and solder, which more than offset somewhat lower prices for lead, zinc and im-

ported copper wire bars. The groups which declined were: the Fibres, Textiles and Textile Products group owing to decreased prices for rope, hemp, flannelette and rayon, which more than offset advances in the prices of raw silk, raw wool and raw cotton; the Wood, Wood Products and Paper group, mainly because of price reductions for newsprint, sulphite pulp, lath, and cedar lumber; the Non-Metallic Minerals and their Products group because of lower prices for anthracite coal; and the Chemicals and Allied Products group due to lower quotations for copper sulphate, tartaric acid, and quinine. The Iron and its Products group was unchanged, slight declines in the prices of steel tank plates being offset by increases in the prices of automobile body plates.

In the grouping according to purpose both consumers' goods and producers' goods were higher, the former mainly because of increased prices for milled products, fish, fruits, fresh and cured meats and sugar, which more than offset declines in the prices of cotton fabrics, coal and drugs, and the latter because of higher prices for live stock, grains, hides, non-ferrous metals and raw rubber, which exerted a greater influence than lower prices for building materials, rolling mill products, cotton fabrics, and newsprint.

In the grouping according to origin raw and partly manufactured goods advanced, increases in the prices of certain vegetable products, animal and marine products more than offsetting decreases in the prices of certain forest and mineral products. In fully and chiefly manufactured goods higher prices for vegetable, animal and mineral products more than offset declines in marine and forest products, causing this group to advance. Canadian farm products were substantially higher, mainly because of higher prices for grains and live stock.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of April of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of

Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912, in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of

five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to permit the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1921, quarterly from 1922 to 1931, and monthly since January, 1932. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.6; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

(Continued on page 560)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN  
TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\* Prior to 1926 number of commodities was 236.

(Continued from page 552)

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318) and bringing the figures down to 1932. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3; 1931, 89.6.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1931 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 126.6; 1931, 125.1; natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918,

114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 159.3; 1929, 159.5; 1930, 158.8; 1931, 157.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

## Retail Prices

Beef prices were slightly higher in most localities, sirloin steak being up from an average price of 20.5 cents per pound in March to 20.7 in April, rib roast from an average of 15.3 cents per pound to 15.9 cents and shoulder roast from 10.9 cents per pound to 11.3 cents. A slight decline occurred in the average price of veal, which was down from 12.5 cents per pound in March to 12.3 cents in April. The price of mutton advanced from an average of 17.7 cents per pound in March to 19.2 cents in April. Both fresh and salt

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

pork also were generally higher, the former averaging 14.5 cents per pound in April as compared with 12.1 cents in March, and the latter 14.3 cents per pound in April and 13.5 cents in March. The price of sliced breakfast bacon rose from an average of 20.2 cents per pound in March to 21.9 cents in April. The price of lard was higher in nearly all localities, averaging 12.4 cents per pound in April as compared with 11.5 cents in March.

The price of eggs showed a general seasonal fall, fresh averaging 22.9 cents per dozen as compared with 27.8 cents in March and 24.7 cents in April, 1932, and cooking averaging 18.1 cents per dozen as compared with 22.6 cents in March and 19.9 cents in April, 1932. Milk was slightly lower at an average price of 9.3 cents per quart. Decreases were reported from Orillia, Brantford, Galt, Port Arthur, Fort William and Nelson, while higher prices were reported from Vancouver and New Westminster. The prices of both dairy and creamery butter advanced, the former being up from 23.1 cents per pound to 24.9 cents and the latter from 26.9 cents per pound to 28.8 cents.

The price of bread was unchanged at an average price of 5.5 cents per pound. Rolled oats averaged slightly higher at 4.6 cents per pound as compared with 4.5 cents the previous month. Potatoes were little changed at 92 cents per ninety pounds. The price of both granulated and yellow sugar was substantially higher in all localities, following the imposition of the tax of 2 cents per pound, granulated being up from 5.6 cents per pound in March to 7.4 cents in April and yellow from 5.5 cents per pound to 7.1 cents. The price of anthracite coal showed little change at an average price of \$15.34 per ton. Rent was unchanged.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices were generally higher. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, was up from an average price of 49.1 cents per bushel in March to 53.6 cents in April. The high price for the month was 59.6 cents per bushel, reached on the 24th, and the low 49.6 cents at the beginning. A marked decrease in world shipments and the prospect of an unusually small United States winter wheat crop, together with a serious decline in United States exchange and a rise in sterling at New York were said to be factors in the advance in prices. In coarse grains flax was up from an average price of 79.3 cents per bushel in March to

84.1 cents in April, rye from 33.9 cents per bushel to 37.7 cents, western oats from 24.5 cents per bushel to 24.7 cents and western barley from 28.9 cents per bushel to 31.3 cents. In milled products flour at Montreal advanced from \$4.60 per barrel to \$4.70, oatmeal at Toronto from \$2.59 per ninety-eight pound sack to \$2.70 and gluten meal from \$16 per ton to \$20. Raw sugar at New York rose from \$1.19 per cwt. to \$1.26 (Canadian funds) while granulated at Montreal sold at \$6.18 per cwt. including the tax. The price in March was \$4.09 per cwt. Ceylon rubber at New York advanced from a price of 2.9-3 cents per pound at the beginning of April to 4.3 cents on the 29th. In livestock choice steers at Toronto advanced from \$4.36 per hundred pounds to \$4.80 and at Winnipeg from \$3.71 per hundred pounds to \$3.78. Veal calves at Toronto declined from \$6.74 per hundred pounds to \$6.09. Bacon hogs at Toronto advanced from \$5.11 per hundred pounds to \$5.55 and at Montreal from \$5.55 per hundred pounds to \$5.87. The same grade at Winnipeg averaged 45 cents per hundred pounds higher at \$4.98. Good lambs at Toronto rose from \$6.42 per hundred pounds to \$7.82. Fresh

eggs at Montreal declined from 23.5 cents per dozen to 20.5 cents, while at Toronto this same grade averaged 18.8 cents per dozen as compared with 21.8 cents in March. Creamery butter at Montreal was slightly higher at 27.3 cents per pound as compared with 27.1 cents in March, while the same grade at Toronto was unchanged at 26.7 cents per pound. Raw cotton at New York rose from 8.2 cents per pound to 8.3 cents (Canadian funds). Raw silk was 9 cents per pound higher at \$1.69. A further reduction in newsprint, effective April 1st, was announced during the month, the price of paper rolls being down from \$1.89 per hundred pounds to \$1.64. Common cedar lumber was down from \$14 per thousand board feet to \$12.50 and hemlock was \$1 per thousand board feet lower at \$16. In iron and steel tank plates at Pittsburg declined from \$1.91 per hundred pounds to \$1.85 in Canadian funds. In non-ferrous metals electrolytic copper at Montreal rose from \$7.18 per hundred pounds to \$7.62. Tin at Toronto was up from 33.5 cents per pound to 34.3 cents. Silver at New York rose from an average price of 33.4 cents per ounce to 36 cents (Canadian funds).

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the April LABOUR GAZETTE.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number on the base 1924=100, was 58.7 for March, a decline of 1.3 per cent for the month, due principally to lower food prices, as non-foods were only slightly lower than the February level.

The *Statist* index number on the base 1867-1877=100, was 77.0 at the end of March, showing no change from the February level. Food-stuffs as a whole were 0.8 per cent higher due to substantial advances in animal food and sugar, coffee and tea, which was nearly counteracted by a fall of 4 per cent in vegetable food. Industrial materials were 0.5 per cent lower, as advances in minerals and textiles were more than offset by a decline in sundries.

COST OF LIVING.—The *Ministry of Labour Gazette* index number on the base July 1914

=100, was 137 at April 1, a decline of 1.4 per cent for the month, due entirely to lower food prices, chiefly eggs, butter, cheese, fish, potatoes and milk.

### Germany

COST OF LIVING.—The index number of the cost of living on the base 1913-1914=100, was 116.6 for March, a decline of 0.3 per cent for the month, which decline included all groups.

### New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1315 for February, an advance of 3.9 per cent from the January level. Except for a decline in the wood and wood products group, all of the main groups showed advances.

COST OF LIVING.—The official index number of retail prices on the base 1926-1930=1000, was 797 for February, a fall of 1.8 per cent from the November index number. Except for a slight advance in fuel and light, all groups were lower than for November.

### United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number on the 1926=100, was 60.2 for March, showing an advance of 0.7

per cent from the February level, which is the first advance in the monthly index number since last September. Of the ten groups, farm products, foods, hides and leather products, textile products, and building materials advanced, while fuel and lighting materials, metals and metal products, chemicals and drugs, housefurnishing goods and miscellaneous products were lower.

The *Annalist* index number on the base 1913=100, was 83.7 for April, an advance of 2.2 per cent over the March level, due to advances in farm products, food products and textile products, which were partly offset by declines in fuels, metals, chemicals and miscellaneous products. There was no change in building materials.

*Bradstreet's* index number, which is the sum-total of the prices per pound of 96 articles of common consumption, was \$6.5359 at April 1, an increase of 2.9 per cent for the month.

### Health Units in Saskatchewan

Reference was made in the March issue of the *LABOUR GAZETTE*, page 254, to a motion before the Saskatchewan Legislature proposing the extension of medical services in the province. This resolution, which was unanimously adopted, read as follows: "That, in the opinion of this assembly, the government should consider whether the reorganization and improvement of medical services of the province can be effected by providing for a system of medical services supported by local rates and supplemented by government grants."

The Hon. F. D. Munro, Minister of Public Health, speaking in support of the resolution, stated that in Saskatchewan there was one doctor for 848 persons in the cities, and one for 2,224 in the rest of the province. He outlined the various health services already provided by the government, the mental hospitals, sanatoriums, union hospitals, government aid to hospitals, psychopathic wards, six venereal disease dispensaries, treatment under the Workmen's Compensation Act, sera and vaccines, biological laboratory service, radium for the cancer clinic, relief health services, municipal doctors and health unit work. The primary principles of state aid were, he said, the right to choose a doctor; recognition of the individualism of the doctor; the general practitioner as a basis for any scheme.

Dealing with vital statistics, the Minister said that within ten years deaths from communicable diseases would be rare, though deaths from generative diseases, such as heart

Advances were noted in breadstuffs, livestock, provisions, hides and leather, textiles, metals, coal and coke and oils, while there were decreases in naval stores, building materials, chemicals and drugs and miscellaneous commodities; there was no change in fruits.

*Dun's* index number based on the estimated cost per capita of a year's supply of commodities in wholesale markets was \$136.864 at April 1, an increase of 0.4 per cent for the month, which is the first increase noted since October. Of the seven groups, breadstuffs, "other food," clothing and metals were higher, while meat, dairy and garden produce and miscellaneous commodities were lower.

**COST OF LIVING.**—The index number of the Department of Labour and Industries, Massachusetts, on the base 1913=100, was 118.5 for March, a decrease of 1 per cent from the February level, due to lower prices for food and clothing.

trouble, cancer and diabetes were on the increase. He was opposed to travelling surgical clinics, and thought full-time public health units would clash with municipal doctor organizations. The results of reorganization would be more adequate service to the people, lessening of the cost, increase in net return to medical profession, and extension of the services.

Further information concerning self-help activities of the unemployed in the United States appears in the April issue of the *Monthly Labour Review* (Washington). (The first article in this series was noted in the last issue of the *LABOUR GAZETTE*, page 366, other references to this subject being made in the issues for January, 1933, page 4, and October, 1932, page 1039.) The present article gives the result of a field survey carried out by the United States Bureau of Labour Statistics in a number of communities where self-help activities have been undertaken with varying degrees of success, with descriptions of the following movements: Self-help activities of unemployed in Los Angeles; Organized Unemployed (Inc.), Minneapolis; the barter movement in Cleveland, Memphis and St. Louis; the People's Exchange of Kansas City, Mo.; the Dayton Mutual Exchange; the barter movement, Oklahoma City; "Barter day" in Logan, W.Va.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1933

THE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the first quarter of 1933, was 170, there being 55 in January, 63 in February and 52 in March.

The report for the fourth quarter of 1932 was given in the LABOUR GAZETTE, February, 1933, page 241. In the first quarter of 1932, 192 fatal accidents were recorded (LABOUR GAZETTE, May, 1932, page 625). The supplementary list of fatal industrial accidents contains 4 fatalities for 1932. In this series of reports it is the custom to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, from the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the Labour Gazette. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the first quarter of 1933 were as follows: agriculture, 28; logging, 18; fishing and trapping, 9; mining, non-ferrous smelting and quarrying, 22; manufacturing, 28; construction 9; electric light and power, 2; transportation and public utilities, 29; trade, 12; finance, 3; service, 10.

Of the mining accidents, 13 were in "metal-liferous mining," 8 in "coal mining," and 1 in "non-metallic mineral mining and quarrying, n.e.s."

Of the accidents in manufacturing, 1 was in "vegetable foods, drink and tobacco," 11 in "saw and planing-mill products," 6 in "wood products," 1 in "pulp, paper and paper products," 4 in "iron, steel and products," 3 in "non-metallic mineral products," and 2 in "chemical and allied products."

In construction there were 2 fatalities in "buildings and structures," 1 in "shipbuilding," 5 in "highway and bridge," and 1 in "miscellaneous construction."

In transportation and public utilities, there were 16 fatalities in "steam railways," 1 in "street and electric railways," 1 in "water transportation," 3 in "air transportation," 5 in "local transportation," 2 in "storage" and 1 in "telegraphs and telephones."

In trade there were 5 fatalities in "whole-sale," and 7 in "retail."

Of the fatalities in service, 2 were in "public administration," 5 in "personal, domestic and business," and 3 in "professional establishments."

The most serious accident occurring during the period under review was caused by a fire in a match factory at Hull, Quebec, on March 15 in which six employees lost their lives. Five female employees were burned to death and one man died from burns on April 14. Twenty-one other employees received injuries but not fatal. The verdict of the coroner's jury read: "Despite the fact that exits and fire drills were insufficient we hold no one responsible and the employee's deaths were accidental. We recommend that the proper authorities enforce stricter regulations respecting match factory buildings."

An investigation with a view to enforcing safety measures in connection with the manufacture of matches has been instituted by Dominion Fire Commissioner in the Insurance Department, with the assistance of officials of the National Research Council and representatives of manufacturers of matches.

Other accidents involving the loss of two or more lives were as follows:

On January 20, two fishermen were drowned when the tide broke up the ice near New Waterford, Nova Scotia, and two other fishermen were drowned near Liverpool, Nova Scotia, on March 13.

Three miners were crushed under a rock slide at Flin Flon, Manitoba, on February 27, and two coal miners were killed during blasting operations at MacKay's Corner, Nova Scotia, on March 31.

Two cordwood cutters were killed at Tall Pines, Saskatchewan, on March 8 when struck by pieces of a circular saw.

Two workers in an explosives plant at Beloeil, Quebec, lost their lives during explosions in the powder press house and corning mill.

Three trainmen were killed at Acadieville, New Brunswick, on January 29, when an engine collided with a snow plow.

On February 8, when a fire destroyed a hotel at Tisdale, Saskatchewan, the proprietress, a maid and the hotel manager lost their lives.

### Supplementary List of Accidents

The supplementary list of accidents occurring during 1932, to be found after the main table of accidents, contains 4 fatalities, of which 1 was in construction, 2 in transportation and public utilities and 1 in trade. One of these accidents occurred in September and 3 in December.

# FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1933

| Trade or Industry                    | Locality                              | Date      | Age | Cause of Fatality  |

### Interstate Conference on Labour Laws in United States

Labour officials of nine States of the American Union met at Boston, Mass., in January for a conference on labour laws. These states were Connecticut, Maryland, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, and the United States Department of Labour. The conference had its origin in a suggestion made by President-elect Roosevelt at Albany in 1931. A similar conference had been held in Harrisburg, Pennsylvania, in 1931 (LABOUR GAZETTE, July, 1931, page 768). The conference this year was called specifically "to consider the possibility of united State action to bring about greater uniformity in the laws governing the hours of employment of women and minors," and to

endeavour to work out some means whereby the specific recommendations of the Harrisburg meeting could be effectuated. The conference agreed in recommending a nation-wide minimum wage law for women and minors, the establishment of public employment offices throughout the country, and the limiting of hours of labour for women and minors. It was decided to send to the governors of the participating States a copy of the recommendations and to bring them to the attention of the State legislatures, State federations of labour, associations of manufacturers, and other appropriate organizations. It was also voted that consideration be given by the governors to the holding of an annual interstate meeting prior to the convening of the legislatures in the various States.

## Recent Decline in Occupational Fatalities

The *Statistical Bulletin*, published by the Metropolitan Life Insurance Company, referred in a recent issue to the decline in the occupational fatalities among its industrial policy holders in the United States and Canada in 1932, as follows:—

"The low level of industrial employment reached in 1932, and, in particular, the decreased activities in the more hazardous industries, such as railroad transportation, mining and quarrying, the building industry, and the manufacture of heavy metals, was largely responsible for the very low occupational fatality rate recorded among adult white male industrial policyholders of the Metropolitan Life Insurance Company. The occupational fatality rate for the year was 22.9 per 100,000 the lowest in the company's experience, covering a period of twenty-one years. It was 16.1 per cent less than that for the year before, when the previous low was recorded. Similarly, the occupational fatality rate for adult coloured males declined to a new low figure, 21.7 per 100,000 in 1932, a decline of 19.3 per cent.

"Since 1929, when the present decline in industrial activities set in, the occupational fatality rate for white male industrial policy-

holders has dropped 36 per cent; while the rate for coloured male policyholders has dropped 44 per cent.

"Among adult white male industrial policyholders, the rate for traumatism by falls, the leading means of accidental deaths of this character, declined 18.8 per cent for the year. Since 1929, the rate for this means of injury has declined 23.5 per cent. Occupational automobile accidents in 1932 was again second in importance to falls. The rate for this means of injury declined 21.7 per cent.

"Traumatism in mines and quarries displaced traumatism by machines, in 1932, as the third most important means of fatal occupational injury. The rate for traumatism in mines and quarries was 2.7 per 100,000; a decline of 10 per cent for the year, while the rate for traumatism by machines was 2.4 per 100,000; a decline of 22.6 per cent. The rates for these means of injury declined 42.6 per cent and 46.7 per cent, respectively, since 1929. Steam railroad accidents, which, a few years ago, were the leading means of occupational injury, ranked fifth in importance in 1932. Substantial declines were also recorded in 1932 for accidental drowning, and for occupational accidents from the use of electricity, and on street railways."

## Accidents in Manufacturing Industries in the United States, 1926-1931

The *Monthly Labour Review* (Washington) gives in its issue for April the results of the annual survey made by the United States Bureau of Labour Statistics of accidents in manufacturing industries for 1931, with comparative figures for the five previous years. The tables show a substantial decrease in accident frequency and severity rates for 1931 as compared with 1930. The "frequency rate" in these tables is the number of accidents for every million man-hours worked. In 1931 an average of 18.85 accidents per million man-hours occurred in the combined industries, being a decrease in the frequency rate from the previous year of 18.3 per cent. An average of 2.59 days for every 1,000 man-hours worked were lost, including scheduled allowances for deaths and permanent disabilities, a decrease in the severity rate of 8.2 per cent.

The frequency rates for the past six years were as follows: 1926, 24.16; 1927, 22.60; 1928, 22.52; 1929, 23.98; 1930, 23.08; 1931, 18.85. The severity rates for the same years were as follows: 1926, 2.62; 1927, 2.58; 1928, 2.64; 1929, 2.43; 1930, 2.82; 1931, 2.59. These figures show alternate falls and rises in both comparisons, the lowest levels being reached in 1931.

The report contains a table of rates for individual industries, by extent of disability and

by years, based on the records of a representative cross section of the country for each selected industry. It is pointed out that while the rates are comparable for the industries severally, the number of accidents and the number of workers shown for any one industry are not comparable with the corresponding figures for another industry. While both frequency and severity rates for the combined groups declined in 1931, as compared with 1930, some of the individual groups show increases in rates. Frequency rates increased 1.30 for boots and shoes, 2.47 for carpets and rugs, 2.16 for fertilizer, 18.55 for sawmills, 7.23 for shipbuilding, and 4.42 for stamped and enamelled ware. Decreases for the other 24 groups ranged from 0.15 for automobiles to 19.44 for planing mills. Severity rates increased 0.4 for automobiles; 0.79 for automobile tires; 0.13 for boots and shoes; 2.33 for brick, tile, and terra cotta; 0.71 for carpets and rugs; 0.75 for foundry and machine shop products; 0.4 for glass, and for iron and steel; 5.65 for logging; 3.39 for sawmills; 0.18 for pottery; 0.13 for steam fittings, apparatus, and supplies; 0.79 for stoves; and 0.12 for woollen goods. Decreases for the other 16 groups ranged from 0.34 for furniture, to 1.59 for petroleum refining.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Allowance to Mother to continue while she is in Hospital

The Provincial Superintendent of Welfare in British Columbia ordered the discontinuance of the payment of an allowance under the Mothers' Allowances Act to a mother during the time she was in hospital and was separated from her child. The woman sought a *mandamus* directing the superintendent to restore the allowance. It appeared that the stopping of payments had resulted in placing upon the municipality the responsibility for caring for the destitute child. The case hinged upon the interpretation to be placed on section 4 of the Act, which reads:—

"No mother shall be entitled to apply for or to receive an allowance under this Act unless she (3) has a child or children under the age of 16 years *living with her*."

The superintendent claimed that when the plaintiff left her home and went into a hospital for treatment, the child was no longer technically "living with her," and on that ground the allowance of \$42.50 had been cut off. On the other hand counsel for the plaintiff contended that, in the intention of the Act, the allowance was for the benefit of the child, and was paid to the mother so that she might bring up the child at home; and that in this case, while the mother might have her personal wants attended to in the hospital, the child was in fact left without the means of support. He claimed that the child continued "living with her," within the sense of the Act, although the mother was temporarily in hospital.

Chief Justice Morrison, of the British Columbia Supreme Court, who heard the case, granted a *mandamus* ordering that the payment of the allowance should be restored.

### Contract to refrain from Business in prescribed Area held Reasonable

The proprietor of a grocery and butchery business at Toronto sought an interlocutory injunction restraining a former partner from conducting a similar business in the same neighbourhood after severing his connection with the firm. When the partnership was dissolved an agreement was signed providing that the defendant would not, for a period of five years, carry on a butchery and grocery business, either directly or indirectly, "nor shall he work as an employee in such business within a radius of one and a half miles" of the firm's premises. The defendant admitted that he was carrying on a similar busi-

ness within the prescribed limit, but he claimed that the agreement was so worded that the limit of distance applied only to his working as an employee; and that as he did not work as an employee the effect of the agreement would be to restrain him from carrying on business anywhere for a term of five years.

Mr. Justice Jeffrey agreed that an agreement which would restrict the defendant from engaging in business anywhere would be unreasonable, and would therefore be void. However, he held that the present agreement, when properly read, was not to be so understood, and that it set a limit to its action, in regard both to time and to place. He considered the agreement not unreasonable, the relationship between the parties not having been that of master and servant. An interlocutory injunction was granted with costs.

*Sotiroff, et al. versus Dimitroff* (Ontario), 1933, *Ontario Weekly Notes*, page 249.

### Individual Right of Action under Professional Syndicates Act of Quebec

A workman who held a 4th class certificate as mechanical engineer was employed by the City of Montreal on the construction of a sewer, this work coming under the Fair Wages regulations, under which a wage rate of 75 cents an hour was stipulated in the contract between the City and the contractor for that class of labour. He claimed that the wages he had actually received were at the rate of 40 cents an hour, leaving a balance in all of \$797.30 still due to him by the contractor. He brought an action in the Superior Court at Montreal under section 14a of the Professional Syndicates Act for that amount. The contractor contended that he had not engaged the plaintiff as a mechanical engineer, but as a labourer at a wage of 40 cents an hour.

Mr. Justice Denis, in his judgment, pointed out that the Professional Syndicates Act (the Trade Union Act) of the Province, applied only to associations of 20 persons or more, but did not apply to the individual members of such associations, much less to persons not members.

The plaintiff, however, cited section 14a of the Act, which was added in 1931, providing as follows:—

"If it be stipulated in any contract that workmen, or the members of the syndicate, union or federation of syndicates shall receive a stated wage, such workmen or members, although not a party to the contract, are entitled to the rate of wages therein stated, notwithstanding any renunciation thereto afterwards agreed upon by them, whether express or implied."

His Honour said that the question at issue was as to the interpretation of the word "or" in the second line of the above section, whether it was disjunctive, as claimed by the plaintiff, or conjunctive, as claimed by the defendant. The first interpretation in his opinion would involve a fundamental change in the intention of the whole Act. Undoubtedly the Act had in view associations seeking the common good of their members, and not individuals seeking private benefits, and it must be presumed that the amendment was not intended to change that main purpose of the Act.

The judgment concluded that the plaintiff had not proved his claim, having failed to establish that he had been engaged by the defendant as a mechanical engineer, as he alleged. The plaintiff's claim was therefore denied with costs.

*Bilodeau versus Loranger and City of Montreal* (Quebec), 1933. *Rapports Judiciaires de Quebec (Cour Supérieure)* vol. 71, page 180.

Another case, like the one preceding, concerned the claim of a workman, under section 14a of the Professional Syndicates Act, for alleged arrears of wages, being the sum of the difference between the fair wages rate and the rate actually paid by the contractor. The contractor in this case had agreed with the City of Montreal to pay his employees 90 cents per hour, but the workman received only 60 cents an hour. Sometimes the workmen were paid in presence of the city representative, when they received 90 cents an hour, but afterwards returned 30 cents; and sometimes in his absence, when they received 60

cents an hour. The workman claimed the amount of the difference between the two rates, basing his action on Section 14a, quoted above. The contractor contended that no legal obligation existed between himself and the plaintiff—the former had agreed to work for 60 cents an hour, and had signed a receipt for his wages on that basis in presence of the city inspector.

Mr. Justice Demers, in the Superior Court at Montreal, stated that the case hinged on the interpretation of section 14a, as to which there had been conflicting judgments. The defendant denied that the article applied to workmen not belonging to a trade union under the Act, and that the right of action belonged to the corporate union, not to an individual workman. "It is true," he said, "that the word 'or' is sometimes employed in a statute as the equivalent of 'and,' and it is equally true that the lawmaker may be presumed to have used the word in its proper sense..... This Section 14a is therefore a new law, having no reference to syndicates or unions; and it is not a union, but an individual member or workman who is entitled to benefit from its provisions. If any doubt in the matter exists, this law, being a law to remedy abuses, should in any event be interpreted in the workman's favour..... Without Section 14a the City alone could prosecute the contractor, but to-day the right belongs to the workman—it belongs to him, not as condition in an agreement, but as a legal right."

The claim of the workman was therefore allowed.

*Corbeil versus Cadieux* (Quebec), 1933. *Rapports Judiciaires de Quebec (Cour Supérieure)*, vol. 71, page 188.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada showed a substantial increase at the beginning of May, according to returns received by the Dominion Bureau of Statistics from 7,998 firms, each employing a minimum of 15 workers and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 714,891 persons, as compared with 699,414 in the preceding month. The employment index (with the average in the calendar year 1926, as the base equal to 100) stood at 77·6, as compared with 76·0 on April 1, and 87·5 at the beginning of May of last year. In the preceding eleven years, the indexes for May 1 were as follows: 1931, 102·2; 1930, 111·4; 1929, 116·2; 1928, 106·8; 1927, 101·8; 1926, 95·4; 1925, 91·9; 1924, 92·9; 1923, 92·5; 1922, 84·3 and 1921, 85·1.

At the beginning of May, 1933, the percentage of unemployment reported to the Department of Labour by local trade unions stood at 24·5 in contrast with percentages of 25·1 at the beginning of April, 1933, and 23·0 at the beginning of May, 1932. The percentage for May was based on the reports compiled by the Department of Labour from a total of 1,716 labour organizations covering a membership of 153,623 persons.

Reports received by the Department of Labour from the Offices of the Employment Service of Canada showed a gain in business transacted by those offices during April, 1933, when compared with that of the preceding month, but a marked decline from the transactions of April, 1932, farming being the group in which the highest gain was shown under the first comparison and construction and maintenance the largest loss under the second. Vacancies in April, 1933, numbered 24,652, applications 47,566 and placements in regular and casual employment 23,415.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was little changed at \$6.86 for May as compared with \$6.83 for April. Comparative figures for earlier dates are \$6.90

for May, 1932; \$8.54 for May, 1931; \$11.17 for May, 1930; \$11.29 for May, 1926; \$10.22 for May, 1922; \$16.92 for June, 1920 (the peak); and \$7.43 for May, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics advanced to 66·9 for May as compared with 65·4 for April. Comparative figures for certain previous dates are, 67·4 for May, 1932; 72·5 for May, 1931; 89·7 for May, 1930; 100·2 for May, 1926; 164·3 for May, 1920 (the peak); and 64·2 for May, 1914.

### Industrial Disputes Investigation Act

During May a Board of Conciliation and Investigation was established by the Minister of Labour, on the application of the employing company, in connection with a dispute between the Hull Electric Company and its operating and maintenance employees. Two other Boards were completed during the month. Full particulars of the recent proceedings under the Act are given on page 586.

### Seventeenth International Labour Conference

The Seventeenth Session of the International Labour Conference opened at Geneva on June 8. The program of the Conference was outlined in the issue of the LABOUR GAZETTE for April, page 399, and it is expected that a full account of the proceedings, with the text of the Draft Conventions and Recommendations adopted, will appear in the next issue. The Canadian delegation was as follows:—

*Delegates representing the Government of Canada:* Dr. W. A. Riddell, Canadian advisory officer, League of Nations, Geneva; Mr. P. E. Renaud, secretary, office of the Canadian Advisory Officer, League of Nations, Geneva;

*Adviser to the Government Delegates:* Mr. Pierre Beaulé, president, Federation of Catholic Workers of Canada, Quebec, P.Q.;

*Delegate representing the Employers of Canada:* Mr. A. R. Goldie, Galt, Ontario, chairman of the Industrial Relations Committee, Canadian Manufacturers Association.

*Delegate representing the Workers of Canada:* Mr. James Simpson, Toronto, Ontario, vice-president, Trades and Labour Congress of Canada.

For the first time in the history of the Conference the United States is directly associated with the work of the 17th session, being represented by "observers," having the power to take part in discussions. These representatives include Miss Mary Anderson, of the U.S. Department of Labour, delegates from the American Federation of Labor, and others.

#### **Claims leased to unemployed miners at Trail, B.C.**

The Consolidated Mining and Smelting Company decided during April to lease certain mineral claims to their unemployed miners. Payments are made for gold and silver according to schedule rates, and the treatment rate is \$5 per ton of 2,000 pounds in minimum 25-ton lots. The 2 per cent government tax is payable by the lessees, and royalties based on the net smelter returns are deducted. A reasonable amount of assaying is done by the company free of charge. The *Roseland Miner*, in announcing this plan said: "The decision of the Consolidated Company, in line with its endeavours to give every relief possible to the unemployed, may go far towards relieving the unemployment situation here. The leasing of the properties it is believed by many will absorb all the unemployed or a greater portion through these operations as they materialize." The Trail correspondent of the LABOUR GAZETTE wrote on June 1 that the company's scheme of leasing part of their mineral claims at Roseland to miners was bearing fruit, and that a considerable number were off the list of unemployed and were doing well. Labour conditions at Trail were reported to be more hopeful than in April.

#### **Conciliation and Arbitration in Queensland, Australia**

An Act to provide for the regulation of the conditions of industries by means of conciliation and arbitration, to establish an industrial court and define its jurisdiction, and for other purposes, received the Royal Assent in Queensland in January. The Act repeals the Conciliation and Arbitration Acts, 1929 to 1931 (LABOUR GAZETTE, April, 1930, page 381), and considerably modifies the system of conciliation and arbitration.

The new Act maintains the Industrial Court established by the former Act. The Court will consist in future of three persons appointed by the Governor in Council, one of whom must be a judge of the Supreme Court, who will act as president. The conciliation

boards and conciliation commissioners are abolished. A provision of the former Act, to the effect that before a dispute could be referred to the Court it had to be certified by a conciliation commissioner that no agreement could be reached before a conciliation board, has been repealed. A member of the Court may now convene a conference, which the interested parties are obliged to attend, in order to prevent or to settle an industrial dispute. The right to call a conference may be conferred by the Court on an industrial magistrate. Any agreement concluded in such a conference is enforceable as an award of the Court.

No appeal lies against the decisions of the Industrial Court, which has jurisdiction in all industrial matters. The Act prescribes, however, that certain general working conditions must be contained in an award, as for instance the 44-hour week, to be worked in six out of seven consecutive days. From time to time declarations as to the cost of living, the standard of living, the basic wage and standard hours may be made by the Court.

Strikes and lockouts not authorized by the trade associations of workers or employers, as the case may be, after decision taken by a secret ballot, are prohibited. In cases where there is no union the ballot is organized by the Registrar among the persons interested in the dispute.

The new Act does not affect existing agreements and awards, which remain in force until rescinded or superseded under the new procedure (a note on the Australian system of arbitration appeared in the LABOUR GAZETTE, February, 1932, page 110).

#### **New Minister of Labour in British Columbia**

Mr. William Middleton Dennies, president of the National Labour Council (Vancouver) of the All-Canadian Congress of Labour, was sworn in on May 16 as Minister of Labour of the Province of British Columbia. The new minister has been a member of the Amalgamated Carpenters of Canada continuously since 1906. He enlisted with the Canadian Engineers in 1915, and served in France, winning the Military Medal, and returned to Canada as Quartermaster-Sergeant. In announcing this appointment the Hon. S. F. Tolmie, premier of the Province, said:—

"Believing that it is the wish of the people that we bring into the government service representatives of all branches of our industrial life, and believing that it is in the public

interest so to do, I have brought into the government as minister of labour Mr. William Middleton Dennies, a member of the higher executive of Canadian labour organizations within the province. I know that in so doing we have secured a man who will do honour to the highest principles of labour, who will work in the interests of labour and through organized labour in the interest and welfare of the province as a whole. In order that the inclusion of Mr. Dennies in the government might be effected, the ministries of mines and labour have been separated, the Hon. W. A. McKenzie continuing as minister of mines and Mr. Dennies to assume the portfolio of labour. Tribute is due to Hon. W. A. McKenzie for his administration of the portfolio of labour during his tenancy of that office, a responsibility he shared in company with the portfolio of Mines. It is felt that in the appointment of Mr. Dennies we will have a man who is particularly allied to labour and in the closest possible contact with labour problems."

The Hon. Mr. Dennies, in a statement issued after his appointment, announced that he would endeavour to make a "real critical survey" of industries in the province in regard to the unemployment situation, in order that a system of reducing hours of work or rotating employment might be devised, and present unproductive expenditures on relief be substantially reduced. He also stated that a general "back to the land" scheme would be devised, men with farming experience being given preference as to the locality of relinquished pre-emptions and other available farm lands. "Others of less or probably no experience in agricultural work will be dealt with on a colonization scheme yet to be formulated. Probably it may be called 'supervised colonization scheme' or 'community farming'."

**"Statistical procedure of public Employment Offices"**

Recently there has been received in the Department of Labour a volume entitled "Statistical Procedure of Public Employment Offices" by Mrs. Annabel M. Stewart and Dr. Bryce M. Stewart, published by the Russell Sage Foundation, New York. In its sub-title the book is described as "An Analysis of Practice in Various Countries and a Plan for Standard Procedure in the United States Made for the Committee on Governmental Labour Statistics of the American Statistical Association." The volume has been compiled and published as the result of a request made by the International Association of Public Employment

Services to the Committee on Governmental Labour Statistics of the American Statistical Association. Detailed studies have been carried out by research at the International Labour Office, Geneva, and in the capitals of France, Germany, Great Britain, Sweden, and Switzerland. On the American continent information relative to the statistical procedure of employment offices was secured in consultation with the Director of the Employment Service of Canada and the Employment Service Branch of the Department of Labour, and from the several States having public employment offices in the American Union.

The study sets forth in detailed form the statistical procedure of the Employment Services in the various countries visited, but in addition the development of public employment offices, their organization, and all procedures whether statistical or related to placement, are outlined in considerable detail. The book provides a useful handbook for any one who would wish to study the inception and growth of free public employment offices, and since the information has been collected through original research it has a definiteness and clarity which could not be secured otherwise.

Perhaps the most interesting point in so far as Canada is concerned is that public Employment Service development in this country has reasonably well kept pace with that in the major countries of the world, while in the matter of co-ordination of services in different parts of the country the example set by Canada has been and is being thoroughly studied in the United States in connection with plans for the improvement of the employment services of the Republic. Such differences as occur between the Canadian system and European offices arise from the fact that use is made of the public employment offices in connection with unemployment insurance systems in some countries, while the offices in Canada relate solely to placement work. From the statistical viewpoint—one of the chief factors in causing the present study to be made—the Canadian Service would seem to provide as satisfactory an example as would the Services in any of the older countries.

**"Waiting period" in unemployment insurance**

The principles of unemployment insurance were discussed by Mr. Sam A. Lewisohn, chairman of the Board of the American Management Association, in the *Review of Reviews and World's Work*, March, 1933. In his view there are two dis-

inct types of unemployment, namely, "fair weather unemployment," and "hard times unemployment." As a general rule men thrown out of work in prosperous times can find jobs elsewhere, and in any case the distress resulting from unemployment at such times is of a mild type. Mr. Lewisohn therefore considers it unwise to overstress the relief of "fair weather" unemployment; no scheme of insurance which provided relief at such times could have reserves sufficient to cope with "hard times" unemployment.

In order to maintain reserve funds for use in times of greatest stress he suggests that a long "waiting period" should become an important part of any future scheme. "The waiting period is the probationary period after a worker loses his job during which no benefits are paid to him. It is the pivotal and crucial provision in any insurance scheme, and its length—that is, the number of weeks before which benefits are paid—has an important effect upon the manner in which the insurance scheme works. It is a controlling feature in determining the period during which the funds shall be distributed, whether during prosperous times or during hard times. There is, after all, a maximum amount of premium that industry can afford to pay; and this premium will go much further in relieving real distress if it is not dissipated during periods of minor distress. One can usually buy a surprisingly large amount of major risk protection by rigorously eliminating any attempt to protect the minor risks at the same time. This is a well-recognized principle that is found in accident and health insurance."

The writer admits that "to abandon, as one of our main objectives, protection against unemployment during prosperous times is a revolutionary suggestion." On the other hand, he points out, "the alleviation of hard-times unemployment is essential. The alleviation of the constant fair-weather seasonal, and technological unemployment may be useful, but is non-essential. The danger is that the non-essential may drain the essential, and fritter away our reserves."

#### **United States Old Age Security Act**

A bill entitled the United States Old Age Security Act, now before Congress, would establish an Old Age Security Bureau in the Department of Labour. The sum of ten million dollars would be appropriated annually to be apportioned among the States and Territories which accept the provisions of the Act. The proposed Bureau would decide whether State plans conform to the purposes of the Act, and

would pay or withhold a State allotment according to its decision. All state plans, to receive an allotment, must contain the following provisions: Plans must be State-wide and mandatory: an old person receiving relief must be a citizen of the United States, and resident within the State for a period to be determined by the State; he must be 65 years or more; and must not possess real or personal property valued at more than \$5,000, or have children or other persons responsible under State law for his support and able to support him.

The Federal allotment must not exceed one-third of the total amount paid to old persons under the plan, except that payments made in excess of \$1 a day to any such person, and payments made to persons who are not citizens of the United States shall not be taken into account. The proportion of the amount of the Federal allotment paid to any person shall be a lien on the estate of the assisted person and upon his death shall be collected by the State and reported to the Bureau.

#### **Registration of female employees in Quebec to be enforced**

The Women's Minimum Wage Board of the Province of Quebec directs the attention of employers of female labour in the province to the recent order requiring such employers to keep registers containing the names, ages and addresses of all their female employees, the number of hours worked each day and the wages earned by such employees, be they employed by the day, hour, piece or any other method. (The text of this order appeared in the last issue of the LABOUR GAZETTE, page 521.) In a recent letter addressed to employers, Mr. Gustave Franco, chairman of the Board, says:

"Negligence or refusal to comply with this Order in Council or any other disposition of the law, or of an order of the Minimum Wage Board renders one liable to a fine not exceeding fifty dollars and the costs, for each violation, and failure to pay fine and the costs, to an imprisonment of not less than one month and not more than two months. As it is essential that these dispositions be complied with, the Board will strictly exact that these registers be kept, for, without this, it is impossible to say whether or not piece workers have been paid according to the Minimum Wage Schedule. It was brought to the notice of the Board that, in many cases, piece workers could not make the minimum wages stipulated in the different orders, and that advantage was taken of the 80 per cent clause to that end. The Board wishes to advise you that if this practice does not cease, it shall be

forced to abolish the 80 per cent clause and will exact that female workers by the week, by the piece or otherwise be paid not less than the minimum wage to which they are entitled as per their experience."

The "80 per cent clause" of the various orders of the Board, mentioned above, provides that in the case of piece workers of more than six months' experience, it is sufficient if at least 80 per cent receive wages conformable to the order.

### **Mother's allowances during the depression**

The 13th annual report of the Executive Director to the Council of the Canadian Council on Child and Family Welfare contains the following paragraphs:—

"The Mothers' Allowances services in all six provinces with this legislation in force have stood up very effectively under a strain of unanticipated severity. In 1932 there were approximately 42,000 mothers and their children under this form of aid. In all the provinces except Ontario and Nova Scotia reductions in rates have been effected, with least hardship in Manitoba, where the budget and schedule system always in force has allowed automatic adjustments with the downward movement in the cost of living. In Saskatchewan the allowance has always differed from that of the other provinces in that it has been a grant in aid only, and further reductions in the past year have created a situation in which the great number of the beneficiaries quite obviously require supplementary relief from other sources. British Columbia's expenditures and provisions were long regarded as difficult to justify from the point of view of the actual need of many of the beneficiaries as well as from that of the province's resources. Marked adjustments, inevitably unpopular, have followed on the adoption of reorganization, suggested by the Council, by British Columbia in the past year.

"The year has brought marked difficulties in this field of social aid, occasioned by the facts that (1) mothers' allowances, except in Saskatchewan, have always been regarded in Canada (and in the United States) as a specialized form of family welfare service, and therefore as providing a more constructive plan of maintenance and individual development for the family than was contemplated under civic or provincial 'relief to the indigent.' The widespread development of direct relief, by force of circumstances on a minimum scale, has thrown into comparison the higher standards of aid generally available under mothers' allowances, and is causing steady pressure towards the lowering of the latter to correspond with the for-

mer; (2) children have reached the maximum age of benefit under mothers' allowances, but like the adolescent in the average family, have found little placement opportunity. In such cases there is continuous pressure for the continuance of the mothers' allowance to the family, especially since it is usually at a better scale than the relief grant to a family of corresponding size. The Council offices have taken the stand consistently that such indirect use of mothers' allowances for unemployment relief is unjustified, can only tend to inflict hardship on the younger members of the allowance family, and eventually to lower the whole standard and purpose of allowances themselves; older employable children in allowance families should be regarded as unemployment cases."

### **Child Protection in the United Kingdom**

The Parliament of the United Kingdom recently adopted the Children and Young Persons Act, 1933, consolidating eight earlier Acts. Among many other provisions the Act lays down general restrictions on the employment of children; it empowers local authorities to make by-laws with respect to the employment of persons under 18 years of age, other than children (i.e., those under twelve); prohibits street trading by persons under sixteen, and provides for the regulation by by-laws of street trading by persons between the ages of 16 and 18; lays down restrictions on children taking part in entertainments; prohibits persons under 16 from taking part in dangerous performances, and provides for the licensing of children between the ages of 12 and 16 to be trained to take part in dangerous performances; prohibits children under fourteen going abroad for the purpose of performing for profit; and provides that no persons between the ages of 14 and 18 shall be sent abroad for this purpose except in pursuance of a licence. One section of the Act deals with the prevention of cruelty to children and young persons, the treatment of juvenile offenders, etc.

### **Hours of work in Quebec and throughout Canada**

Hon. C. J. Arcand, Minister of Labour for the Province of Quebec, in an address at Montreal, on May 19, announced that, in accordance with legislation adopted at the recent session of the legislature, the 40-hour working week would shortly be made effective in the construction industry in the Province as a palliative for the present emergency. This action would be taken, he said, as a result of a recent conference between the Department of Labour, the Builders' Exchange, the

Montreal Trades and Labour Council, the National Catholic Syndicate, and construction trade unions. Eventually it was hoped that the new law would be extended to trade and industry.

In a statement on June 8, Mr. Arcand announced that the provincial government would endeavour to organize an interprovincial conference, to be held at Ottawa next autumn, for the purpose of securing uniform legislation limiting hours of labour in industry and trade throughout Canada.

**Shorter hours  
and work-  
sharing  
favoured by  
U.S. Chamber  
of Commerce**

Shorter working hours in industry were approved by a special committee recently appointed by the United States Chamber of Commerce to study and report on changes in wage rates and working periods, and

their effects upon the restoration of economic equilibrium. The report of the committee was considered at the annual meeting of the Chamber of Commerce in May. Its recommendations were briefly as follows:—

All employers should determine the extent to which working time can be reduced without impeding efficiency or adversely affecting the welfare of the workers, and should adjust their schedules so as to provide employment for the largest number of workers. While unemployment continues serious, employers should apply the principle of sharing work, with 40 hours a week as a maximum working period. Each trade organization should encourage the adoption of spread-work methods, and the Government also should divide work as far as possible among its employees. When work sharing is introduced, working time should be adjusted to the varying requirements of the workers, so that the wages of those already on the payroll may be protected. The minimum number of hours of work should be sufficient to provide adequate wages. Working schedules should be made flexible, and in the event of technological changes, hours of work should be adjusted, and trained workers re-allocated so as to permit the retention of the largest possible number. The gains accruing to business enterprise from increases in productivity and technical efficiency should be shared with consumers in the form of lower prices, and with wage-earners in the form of increased wages. With due allowance for changes in the cost of living, wage rates should be such as to permit the consuming power of the workers to keep pace with productive capacity. The absolute minimum wage of full-time workers should be sufficient for their essential living require-

ments; such workers should also be able to accumulate reserves to meet the risks of unemployment, illness, and old age, with the help of thrift and benefit plans provided by employers. In view of the variations of hours and wages in various industries, no State or national legislation should establish fixed standards. On the other hand, the Federal Government should sanction agreements entered into voluntarily by those concerned, establishing minimum wage scales and maximum working hours, provided the Government considers such agreements would tend to promote the public interest and prevent unfair competition; such agreements should be legally binding.

**Proposed  
plan for  
apprenticing  
young men on  
farms**

A plan to establish a system of farm apprenticeship for unemployed men between the ages of 18 and 22 years was recently considered by the Winnipeg Board of Trade. Under this plan each young man would be apprenticed to a farmer for a term of two years. In the first year the provincial government would pay \$5 for each of the six winter months, the farmer paying \$10 a month during the summer season. In the second year the farmer's payments during the summer months would be increased to \$15 a month, the government's contribution in winter continuing as in the first year. In devising this plan the Board had in mind the problem resulting from the release of large groups of youths from school, having no prospect of employment in industry.

**Two years  
of sickness  
insurance in  
France**

An inquiry into the working of the Social Insurance law, which took effect in France in 1930 (LABOUR GAZETTE, June, 1930, page 623, etc.), was recently made by the French Confederation of Medical Practitioners, for the purpose of determining the extent of abuses of the system that had been alleged. "On the whole," it is stated, "the inquiry into this aspect of social insurance leaves a satisfactory impression. Pessimists had prophesied that the scheme would soon collapse, undermined by the combined abuses of insured persons and doctors. Nothing of the sort has occurred, as the financial prosperity of the funds bear witness. The enquiry, while noting the insufficiency of inspections, destroys the legend of wholesale abuse. The population of the French towns and country districts remains on the whole reliable and honest, and even in a time of

economic stress there has been no exploitation of the funds. This augurs well for the future."

No conflict between the medical unions and the funds in respect of the appointment of inspecting doctors was found. At least four methods of remuneration are in use: a fixed annual salary, a fixed annual payment for each insured person, payment by the day or hour, and payment for each file checked (in the case of inspection of documents). Unjustified drawing of cash benefit is stated to be rare in most departments, but considerable in a few. The proportion of cases in each department or fund in which the visit of the inspecting doctor led to an immediate return to work is remarkable; it varied from 5 per cent to 20 and 30 per cent, and in exceptional cases 50 per cent. Though the Act has been in force for two years, whole departments still have no inspection, and in others inspection is rare and inefficient. This the report describes as a grave defect; to the suggestion that abuses do not occur it answers that much more probably they are simply not discovered. The absence, among 15,000,000 members, of the idea of exploiting the funds is described as very improbable.

The Social Insurance law provides for the compulsory insurance of all wage earners whose wages do not exceed 15,000 francs per annum (18,000 francs in the larger cities), against sickness, incapacity, old age and death; and also extends maternity and unemployment benefits. The cost of the insurance is borne by the employer, the worker and the state, the amount of contribution from the worker varying in accordance with the remuneration. The assessment amounts to about 8 per cent for industrial workers and about 2 per cent for agricultural workers, half to be paid by the worker and half by the employer.

The school for the unemployed at Sydney, N.S., completed its first year this month. The annual report showed that good progress was made by the students in the classes, which were conducted by college graduates.

During the month of May a total of 2,516 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 14 of which were fatal cases; in Schedule 2 industries 142 were reported including 1 fatal case; and 193 accidents to employees of the Crown, 1 of which was fatal, were reported during the month making in all 2,851, of which 16 were fatal.

In connection with the Seventh Census of Canada, 1931, the Census and Vital Statistics Branch of the Dominion Bureau of Statistics

has issued a report showing the number of the gainfully employed ten years of age and over, classified according to occupation and sex, for cities of 30,000 population and over. This report will be followed shortly by a report giving similar information for all Canada, an outline of which will be given in a future issue of the LABOUR GAZETTE.

A series of free lectures for the unemployed commenced at Montreal Technical School on June 12. Twenty lectures were to be given on each of the following subjects: industrial physics; matter (measures); pressures in liquids; pressures in gases; atmospheric pressure; force and motion; levers and balance; centre of gravity; internal resistance; falling bodies; energy; work; friction; simple machines; heat; transmission of heat; humidity; expansion and contraction; fusion-vaporization; gas and steam engines; light. Scholarships and prizes will be offered to the students after optional examinations.

The Ontario Medical Association, at a convention held at Toronto during May, adopted a resolution recommending that the medical care of indigent persons should be removed from the jurisdiction of municipal authorities, and that a provincial Board, similar to the Workmen's Compensation Board, should be established for the purpose of dealing with the payment of doctors for such medical services. It was stated that confusion and inequality of payments result from the present method of municipal control, and that medical men are now called upon to bear an undue burden in connection with existing economic conditions.

Canadian labour sustained a serious loss recently in the death of Mr. S. E. White, President of the Canadian Association of Railway Enginemen, Conductors, Trainmen, Yardmen, Telegraphers and Dispatchers, as a result of an accident on the Canadian National Railways, 32 miles east of Montreal. The late Mr. White came to this country at the age of 16 from Bisley, England, and shortly afterwards entered the service of the Grand Trunk Railway. For nineteen years he was a member of the Brotherhood of Locomotive Engineers, and at the inception of the Canadian Association of Railway Enginemen in 1921 he became its organizer. In 1923 he was elected president of the organization, a position he held until the time of his death.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

**I**NDUSTRIAL conditions, as affecting the employment situation throughout Canada at the end of May, were reported by Superintendents of the Employment Service of Canada to be as follows:

In Nova Scotia farmers were busy planting potatoes. Trawlers and deep sea fishermen reported good catches. The lobster catch had improved and salmon and fresh herring were plentiful. There were no new developments in the logging industry. Mines operated from one to four days in the New Glasgow district during the last week of the month. Sydney mines were idle and in Glace Bay and vicinity an average of nearly four days per mine was worked. Iron and steel industries were on short time, but mineral water and cereal manufacturers and confectioners reported improvement. Business was good in oil refineries, but sugar refining fair. No new construction was in progress, although considerable repair work was under way, also city street and sewer construction was being continued. There was a considerable increase in railway and automobile traffic due to the holiday. The first tourist steamship from New York docked in Halifax during the week. Freight traffic was reported good. Trade, both wholesale and retail, was fair, with collections slow. There was a good demand for domestics, housekeepers and charworkers, with plenty of applicants to fill all orders.

New Brunswick farmers were busy ploughing and seeding. Assorted seed, supplied by the Provincial Government, was being distributed under the jurisdiction of the Chatham Town Council. Lobster fishing was fairly good, with quantities going to the United States by truck. Shad were being taken in fair quantities in Saint John harbour. Sardine fishermen were busy, there being considerable demand from canning plants in Maine, which had not operated for some years. Pulpwood cutting had started and a large number of men were going in at the lower end of Saint John County and Charlotte County. There were plenty of applicants available. Very little new construction work was being commenced, but many small repair jobs were in progress. Street paving was being continued. Manufacturing generally showed little change, although confectioners and food stuff manufacturers reported business fair. Railway passenger and freight traffic was fair, but waterfront work quiet. Retail and wholesale trade was fair, as also were col-

lections. There were few calls for permanent domestic workers, but casual workers were in fair demand.

A slight improvement in farming was reported by the majority of offices in the Province of Quebec. Activity in logging was indicated by the placement of a number of river drivers through the Employment Office at Quebec City. Mining in the Amos zone showed a distinct improvement. Manufacturing industries in Quebec, Hull and Sherbrooke were somewhat better. In Montreal, clothing and textile trades were active. Tobacco, metallurgy and rubber were quiet and very little activity was in evidence in the boot and shoe trades. In Three Rivers, on the other hand, increased production was reported in the boot and shoe industry and improvement in paper manufacturing. Building tradesmen were in demand in Hull and Montreal. In the latter city a large number of workers were employed on street repairs and sewer construction. Inactivity in building construction was reported by Quebec and Sherbrooke, but in Three Rivers a few repair jobs were in progress. Transportation was quiet, except at Three Rivers, where a quantity of paper had been shipped. Trade had increased in Montreal and Quebec City, and a satisfactory situation was reported from Sherbrooke. The demand for domestics had increased considerably and, as is customary at this time of the year, several casual placements had been made by all offices.

While the majority of offices in Ontario reported very little demand for farm workers, several offices continued to receive orders and experienced no difficulty in providing suitable help. Tobacco planting in Norfolk County had commenced, with sufficient workers available locally to meet the requirements. Cutting and peeling will soon be in full swing in the Port Arthur district and camps are being opened which will give employment to a large number of men. Pulpwood cutters were in demand at Timmins and Sault Ste Marie, also river drivers at the latter point and at Sudbury. Mining in the Cobalt area was active and although each operation was small, there was considerable improvement in the aggregate for several hitherto unemployed workers. Building construction, with few exceptions was limited to repair work, but considerable employment continued on highway, street and sewer construction. The manufacturing industries generally showed improvement, and although conditions in many centres had not returned to normal, old hands were

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

|   | 1933       |               |               | 1932          |               |               |

(8) MacLean's Building Review.

being called back, noticeably for the manufacture of iron and steel products, furniture, rubber products, electrical refrigerators and motor bodies. Textiles continued to show activity, particularly in shirt making. Water transportation had revived at Fort William, due to the shipment of wheat to eastern points. The demand for women domestic workers, although not extensive, increased somewhat, due to calls for workers for summer homes and tourist lodges.

There was a slight increase in the demand for farm help in the Province of Manitoba, although seeding was practically completed. Recent heavy rains had proven beneficial to crops and had reduced insect hazards in some degree. Logging and mining were quiet, but manufacturing concerns in the Winnipeg area reported better business. Owing to the exceedingly dull conditions which continued to prevail in building construction, there was little or no work for the large majority of those usually engaged in the building industry. Retail trade showed little change, but the volume of wholesale trade was fairly satisfactory. A distinctly better demand for help prevailed in the women's domestic section, however new registrations for employment were also heavier.

Seeding was near completion in Saskatchewan, so that the call for farm help in some parts of the province showed a slight decline. No activity was reported in mining. Building construction also was quiet and about the only work available was that provided in the National Park Relief Camps, to which men were being sent. A moderate demand existed in the women's section for domestics and housekeepers, with some difficulty experienced in securing help who would accept positions in outlying districts.

There were few calls for farm help in the Province of Alberta as the seeding season was over. Sawmill work was fair, but with little demand for men. No further developments took place in mining and it seems that quietness will prevail in this industry until the mines re-open in the fall. Only slight improvement was noted in manufacturing, one outstanding item being a return to a five-day week at oil refineries, which was a definite increase. Building construction was slightly better, but still far from good. Trade was slack and the women's domestic section was also quiet, with sufficient applicants available to meet all demands.

Little demand for farm help existed in the Province of British Columbia, although severe frosts in the Kamloops area had damaged tomatoes and potatoes, which would have to

be re-planted. Logging showed more improvement than for some time past, with camps re-opening and an increased call for pulpwood cutters. Prospects also were better for more permanent work in this line than of late. A number of mines were preparing to start operations, but as yet few requests had come in for men. Manufacturing was slack, although cold storage, cannery and reduction plants were active. Apart from a few small houses being built, there was little building construction going on, thus relief camps continued to be the only opening for common labour. Longshore workers were busy, especially at Victoria, where the month of May has been the best for some years. A few more workers were required in the women's domestic section, with sufficient applicants at hand to meet all requirements.

The Dominion Bureau of Statistics tabulated returns from 7,998 firms, who reported a substantial increase in employment on May 1; the payrolls of these employers aggregated 714,891 persons, as compared with 699,414 in the preceding month. This gain exceeded that recorded in any month since September, 1931, but was rather smaller than the average increase reported on May 1 as compared with April 1 in the years since 1921. The index stood at 77.6, as compared with 76.0 in the preceding month and 87.5 on May 1, 1932, while on the same date in the eleven preceding years it was as follows: 1931, 102.2; 1930, 111.4; 1929, 116.2; 1928, 106.8; 1927, 101.8; 1926, 95.4; 1925, 91.9; 1924, 92.9; 1923, 92.5; 1922, 84.3, and 1921, 85.1.

Heightened activity was recorded in all five economic areas, firms in Quebec showing the largest number of extra workers. In the Maritime Provinces, manufacturing and construction reported improvement, while transportation released some employees. In Quebec, large increases were reported in transportation and building and highway construction and in manufacturing, notably of textile, lumber and iron and steel products. On the other hand, services and logging were slacker, and there were reductions in tobacco factories. In Ontario, construction, trade and transportation reported increases, but the movement was downward in manufacturing, communications and services. In the Prairie Provinces, manufacturing, retail trade and construction showed heightened activity, while reductions were reported in coal mining, transportation, services and wholesale trade. In British Columbia, logging, building, highway and railway construction and manufacturing showed substantial improvement. Transportation and mining, however, were not so active.

Quebec City, Montreal, Toronto, Ottawa, Windsor and the adjacent Border Cities and Vancouver showed improvement, but the tendency was downward in Hamilton and Winnipeg. In Montreal, transportation recorded a considerable seasonal advance, and manufacturing and building construction were also busier, but services and trade afforded less employment. In Quebec, most of the improvement took place in shipping and manufacturing. In Toronto, building construction, retail trade and transportation reported increases in personnel, while manufacturing showed little change on the whole, and services were slacker. In Ottawa, construction, transportation, manufacturing and trade reported improvement. In Hamilton, manufactures were slacker, while trade and transportation showed increased activity. In Windsor and the adjacent Border Cities, further improvement was noted, chiefly in automobile factories. In Winnipeg, retail trade was rather brisker, but reduced activity was indicated in construction, while manufacturing showed no general change. In Vancouver, manufacturing was more active; transportation, on the other hand, registered a decrease.

An analysis of the returns by industries shows that there was a further advance in manufacturing, particularly in lumber and fish-preserving plants. Among the non-manufacturing divisions, transportation, construction and retail trade registered increases in employment, while coal mining, communications, services and wholesale trade released employees. Logging showed no general change.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of May, 1933.

**TRADE  
UNION  
REPORTS**

A slight increase in the volume of employment afforded local trade union members was indicated at the end of

April by the returns tabulated from 1,716 labour organizations, with a total of 153,623 members. Of these, 37,659 or a percentage of 24.5 were without work, in contrast with 25.1 per cent in March. The situation declined slightly from April last year when 23.0 per cent of the members reported were unemployed. Some falling off in activity from March was apparent in Alberta and Manitoba, the coal mines in the former province being responsible in large measure for the change, while in Manitoba the recessions were less than 1 per cent. In all other provinces more favourable conditions prevailed than in March, though the changes were not pronounced, Saskatchewan with a

3 per cent gain showing the greatest expansion. Contrasted with the situation in April last year, Nova Scotia unions reported extensive employment losses during the month reviewed, and in Ontario, Alberta, British Columbia and Saskatchewan, recessions of much lesser proportions occurred. On the contrary, Quebec members were afforded a somewhat greater volume of work, and slight increases in activity were apparent among Manitoba and New Brunswick unions.

On another page of this issue appears a more detailed article with tabular statements on unemployment among local trade unions at the end of April, 1933.

**EMPLOYMENT  
OFFICE  
REPORTS**

During the month of April, 1933, the offices of the Employment Service of Canada made 24,965 references of persons to positions and effected a total of 23,415 placements. Placements in regular employment were 12,946, of which 9,518 were of men and 3,428 of women, while those in casual work were 10,469 in number. Applications for work reported at the various offices numbered 47,566, of which 36,674 were from men and 10,892 from women workers. Employers advised the Service of 24,652 vacancies during April, 17,453 for men, and 7,199 for women. A gain was shown in the business transacted when the above figures were compared with those of the preceding month, but a loss was recorded from the transactions of last year, the records for March, 1933, showing 22,613 vacancies offered, 46,534 applications made and 21,604 placements effected, while the April, 1932, records showed 34,961 vacancies, 57,830 applications for work and 33,744 placements in regular and casual employment. A report in greater detail of the work of the Employment Offices for the month of April, 1933, appears elsewhere in this issue.

**BUILDING  
PERMITS AND  
CONTRACTS  
AWARDED**

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during April, 1933, was \$1,551,693 as compared with \$934,555 in the previous month and with \$4,370,863 in April, 1932.

The value of construction awards throughout the Dominion during May, 1933, is estimated by the *MacLean Building Review* at \$6,514,100. Of this total, \$2,066,600 was for residential buildings; \$2,142,500 was for business buildings; \$1,720,700 was for engineering purposes, and \$584,300 was for industrial purposes. The apportionment of the contracts awarded during May, 1933, by provinces, was as follows: Ontario, \$2,441,800; Quebec,

\$2,250,300; British Columbia, \$794,900; Alberta, \$466,500; Manitoba, \$222,400; Nova Scotia, \$163,300; New Brunswick, \$87,800; Saskatchewan, \$78,600; Prince Edward Island, \$8,500.

### Production and Trade

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 581.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that economic conditions in Canada recorded improvement during April over the level of the first quarter, the more optimistic tone being reflected in marked advances on stock and commodity exchanges while business operations showed a gain over the preceding month.

Business operations were at a higher level in April than in the preceding month, the gains in industrial production being well diversified. Conditions in mineral production were mixed, gains and declines being about evenly divided. Shipments of the precious metals were in lesser volume than in March. Receipts of gold at the Mint were 206,582 ounces compared with 264,159 in the preceding month, and silver shipments were 652,421 ounces compared with 1,692,469. Nickel exports were 2,746,000 pounds compared with 5,073,000, the decline being less than normal for the season. Zinc shipments to other countries also showed a gain after seasonal adjustment, the total in April being 14,057,800 pounds. Asbestos exports of the better grades were 4,995 tons compared with 3,641 and the imports of bauxite for the manufacture of aluminium showed a gain after seasonal adjustment.

The milling industry was more active in the last month for which statistics are available, a marked increase being shown in the output of wheat flour, oatmeal and rolled oats. The output of manufactured sugar was 46,455,000 pounds compared with 55,432,000 in March. Declines were shown in inspected slaughtering of live stock, the index being 109.0 compared with 119.2. The composite for the ten factors indicating the trend of the production of foodstuffs, was 82.7 compared with 74.1.

Crude rubber imports were 1,245,000 pounds compared with 2,496,000 in March, a considerable decline being shown after seasonal adjustment. Imports of raw cotton and wool were at a low level in April, a decline being shown from March even after the usual adjustment.

The output of newsprint was 147,759 tons compared with 137,078, the gain after seasonal

adjustment being more than 8 per cent. Wood pulp and shingles were exported in greater volume, while a decline was shown in the exports of planks and boards. The forestry index reflecting mainly the greater output of newsprint was 63.7 compared with 60.7 in March. Output of steel ingots at 11,384 tons showed a slight gain over March, the production of pig iron being suspended during the month. Output of automobiles was 8,255 units compared with 6,632 in March, the gain being greater than normal for the season. The decline in the imports of petroleum was less than normal for the season.

**Coal.**—The Canadian production of coal in April amounted to 641,398 tons, a decrease of 37 per cent from the average for the month during the past five years of 1,018,722 tons. Bituminous coal output in April totalled 498,800 tons, sub-bituminous, 30,374 tons, and lignite coal, 112,224 tons. Nova Scotia mines produced 247,127 tons as compared with 291,970 tons in April, 1932. Alberta's output during April was 236,825 tons or 6.4 per cent below the total for the corresponding month of 1932. A decline of 32.7 per cent was recorded in the production from British Columbia mines; the April output was 99,047 tons as against 147,194 tons a year ago. Production in New Brunswick rose to 24,587 tons from the April, 1932, total of 10,015 tons. Saskatchewan operators reported an output of 33,712 tons in April; a year ago 37,360 tons were produced. There was a small production of lignite coal in Manitoba during April.

Importations of coal into Canada totalled 431,799 tons, a decline of 30 per cent from the April, 1928-1932 average of 616,403 tons. Receipts of anthracite coal in April were recorded at 150,054 tons, made up of 86,437 tons from Great Britain and 63,617 tons from the United States. Bituminous coal imports consisted of 269,381 tons from the United States, 12,209 tons from Great Britain and 144 tons from Germany. Imports of lignite coal in April amounted to 11 tons.

Exports of Canadian coal declined 60 per cent to 8,363 tons as compared with the five year average for April of 20,843 tons. During the month under review, 4,369 tons were cleared through Nova Scotia and New Brunswick ports and 3,994 tons through Manitoba, Saskatchewan, Alberta and British Columbia ports.

Coal made available for consumption in Canada during April totalled 1,064,834 tons or 34 per cent below the 1928-32 average for the month of 1,614,282 tons. The month's coal supply was made up of 150,054 tons of anthracite coal, 772,186 tons of bituminous coal, 30,374 tons of sub-bituminous coal and 112,220 tons of lignite coal.

Production of coke in Canada suffered a seasonal falling-off during April and declined to 121,597 tons from 138,750 tons in the previous month. In April a year ago output was reported at 142,606 tons.

**EXTERNAL TRADE.** A summary of Canadian trade in April, 1933, prepared by the Department of National Revenue, shows that the merchandise entering Canada for consumption amounted to \$20,457,294, as compared with \$32,850,623 in the preceding month and with \$29,794,296 in April, 1932. The chief imports in April, 1933, were: Non-metallic minerals and products, \$4,022,445; iron and its products, \$3,647,483; fibres, textiles and textile products, \$3,310,905.

The merchandise exported from Canada during April, 1933, amounted to \$20,011,652, as compared with \$36,578,834 in the preceding month and with \$26,927,756 in April, 1932. The chief exports in April, 1933, were: Wood, wood products and paper, \$7,157,316; agricultural and vegetable products, mainly foods, \$3,879,009; animals and animal products, \$2,942,807.

### Strikes and Lockouts

The time loss due to industrial disputes during May was almost three times as great as that recorded for the previous month, the number of workers involved and the time loss incurred showing approximately the same increase. As compared with May, 1932, while an increase occurred in the number of disputes recorded, the number of workers involved and the time loss incurred was substantially less than that recorded for the same month last year when strikes involving some 1,200 coal miners in Alberta caused a time loss of approximately 25,000 working days. There were in existence during the month sixteen disputes, involving 1,542 workers, and resulting in a time loss of 11,927 working days, as compared with five disputes, involving 690 workers and resulting in a time loss of 4,435 working days in April. In May, 1932, there were on record thirteen disputes, involving 1,823 workers, and resulting in a time loss of 30,565 working days. At the end of the month there were six disputes in progress recorded as strikes and lockouts, involving approximately 513 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off by the union.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine

cities showed little change at \$6.86 for May as compared with \$6.83 for April; and \$6.90 for May, 1932. Comparative figures for previous dates are, \$8.54 for May, 1931; \$11.17 for May, 1930; \$11.29 for May, 1926; \$10.22 for May, 1922; \$16.92 for June, 1920 (the peak); and \$7.43 for May, 1914. The most important advances occurred in the prices of beef, mutton, pork, bacon, lard, flour, sugar and potatoes, while the prices of eggs, milk and butter were seasonally lower. Including the cost of fuel and rent with that of foods the total budget was lower at \$15.58 for May as compared with \$15.74 for April; \$16.45 for May, 1932; \$18.82 for May, 1931; \$21.49 for May, 1930; \$21.54 for May, 1926; \$26.92 for July, 1920 (the peak); and \$14.21 for May, 1914. Fuel was slightly lower due to seasonal decreases in the prices of anthracite coal and wood. Decreases in rent were reported from several localities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926, again advanced, being 66.9 for May as compared with 65.4 for April. This index was 67.4 for May, 1932; 72.5 for May, 1931; 89.7 for May, 1930; 100.2 for May, 1926; 164.3 for May, 1930 (the peak); and 64.2 for May, 1914. In the classification according to chief component materials four of the eight main groups advanced, three were lower and one was unchanged. The groups which advanced were: the Vegetables and Vegetable Products group, due to higher prices for grains, flour and rolled oats which more than offset lower prices for bran, shorts, gluten meal, onions and hay; the Fibres, Textiles and Textile Products group, mainly because of higher prices for raw cotton, raw wool, raw silk, worsted cloth yarn, raw jute and hessian; the Wood, Wood Products and Paper group owing to advanced quotations for lumber and shingles which more than offset lower prices for sulphite and ground wood pulp; and the Non-Ferrous Metals and their Products group, because of higher prices for antimony, copper, tin, lead, silver and zinc. The groups which declined were: the Animals and their Products group, because of lower prices for cured meats, butter, lard, eggs and calves which more than offset advanced quotations for steers, hogs, lambs, hides, leather and fresh meats; the Iron and its Products group, mainly because of lower prices for steel rails, steel tank plates and automobile body plates; and the Chemicals and Allied Products group, because of lower prices for zinc oxide and carbon black. The Non-Metallic Minerals and their Products group was unchanged, higher prices for asbestos being offset by lower prices for coal and coke.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**D**URING the month of May a Board of Conciliation and Investigation was established by the Minister of Labour under the provisions of the Industrial Disputes Investigation Act to deal with a dispute between the Hull Electric Company and its operating and maintenance employees. The application was received in the Department of Labour on May 6 from the employing company, who stated that the dispute had arisen in connection with its proposal to reduce wages about 10 per cent and to make certain adjustments in working hours and conditions. Eighty employees were stated to be directly affected by the dispute and eighteen indirectly. The personnel of the Board is as follows: Mr. Lynn B. Spencer, K.C., of Welland, Ontario, chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members, Messrs. Hamnett P. Hill, K.C., of Ottawa, and W. F. O'Connor, K.C., of Toronto, nominated by the company and employees, respectively.

The constitution of a Board of Conciliation and Investigation to deal with a dispute be-

tween the Hydro Electric Commission of the City of Hamilton and certain of its employees was completed during May by the appointment of His Honour Judge J. H. Denton, of Toronto, as third member and chairman. The appointment was made on the joint recommendation of the other Board members, Messrs. C. W. Sherman, of Hamilton, and Fred Bancroft, of Oakville, nominees of the employer and workmen, respectively.

The chairmanship of the Board established to deal with differences between the Winnipeg Electric Company and certain of its employees being motormen, conductors and busmen, and employees of the Mechanical, Track and Gas Production Departments, was also filled during May, the Honourable Mr. Justice A. K. Dysart, of Winnipeg, being appointed to this position by the Minister of Labour in the absence of a joint recommendation from Messrs. Ernest T. Leach, K.C., and Allan Meikle, both of Winnipeg, the Board members appointed on the recommendation of the employing company and employees, respectively.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of Recent Proceedings

**F**OUR new decisions were given recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the *LABOUR GAZETTE*, February, 1933, page 125, and in previous issues; and the fourth report of the proceedings of the Board covering the period from October, 1927, to September 30, 1930, was issued as a supplement to the issue of December, 1930.

The Board was established under a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. It has power to determine all differences arising between the railway companies and members of any of the six railway brotherhoods, "including the interpretation of wage schedules or agreements, having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of labour, one for each of the following railway brotherhoods; the Brotherhood of Lo-

comotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

### Case No. 409—Canadian National Railways (Central Region) and Brotherhood of Maintenance of Way Employees

The bridge shop at Danforth was closed on December 31, 1929, with the result that the men formerly employed there, who were in a separate seniority group, were thrown out of work. In order to provide for some of these men the company placed a few of those with long service on a cleaning and painting job in the St. Clair Tunnel, thus displacing painters belonging to the Bridge and Building Department, the work being considered to be of a special nature which in normal times would be handled by a special gang. The employees of the Bridge and Building Department contended that the men from the bridge shop had no right, under the Seni-

ority rules of Wage Agreement No. 8, to displace the painters on the tunnel, as they were steel men and not painters. They claimed that the displaced painters, four in number, should be paid for all time so lost.

The Board, in view of all the circumstances, decided that the painters' claim should be settled on the basis of 50 per cent of the amount claimed.

**Case No. 410—Canadian National Railways (Central Region) and Brotherhood of Railroad Trainmen.**

The abolition of the yard at Woodstock raised the question of the rights of the men formerly located in that yard, when transferred elsewhere, to exercise seniority, under Article 132 of the Schedule, over junior men located in another yard. In this case two yard foremen discharged from Woodstock yard were assigned by the company to London and Niagara Falls respectively. They hesitated to leave Woodstock, believing that there was a possibility that the yard there would re-open. Finally, after 45 days they were placed in the new positions. They then applied for pay for the time that elapsed between the closing of the Woodstock yard and their being placed in new positions. The Board found that a material difference of opinion existed as to the proper interpretation of Article 132, but that the two foremen, by their delay in leaving Woodstock, were themselves responsible for their loss of time, and that the company was not responsible therefor.

The claim of the employees was denied.

**Case No. 411—Canadian National Railways (Western Region) and Brotherhood of Locomotive Firemen and Enginemen.**

A hostler who had been on the permanent list as such since 1911 was temporarily displaced by an employee who had previously acted as assistant foreman, but had never been on the list of hostlers. The employees contended that he was entitled to eight days' pay, citing Article 1 of the Schedule, which requires the posting of seniority lists for hostlers, and Article 26, which requires that when suspension is held to be unjust, a dismissed employee is to be reinstated and paid for lost time. The company pointed out that the status of the man who had displaced the claimant had been discussed with the general chairman of the Brotherhood, and that it had been decided to assign this man to his proper position in the seniority list with respect to his service as hostler. The matter having been thus adjusted the company contended that they should not be penalized for con-

ditions prior to the settlement. The company further stated that the claimant had not taken work at another point when it was offered to him.

The claim of the employees was sustained by the Board.

**Case No. 412—Canadian National Railways (Atlantic Region) and Brotherhood of Railroad Trainmen.**

The run between Campbellton and Rivière du Loup was formerly divided between two train crews, but in November, 1932, the company required the same crew to run through the entire distance. The employees pointed out that two promotion districts were by this arrangement covered by one run, notwithstanding an agreement reached in 1929 that no change would be made in promotion territories in the Atlantic region, except by agreement. Article 30, they claimed, required that "trainmen will not be transferred to or run on other than their own freight section or assigned territory, except in case of shortage of men on such other territory." Moreover, they contended that no saving was effected in this case by running men off their own promotion territory.

On the other hand, the company cited Article 62 of the schedule, which reads:—"unless otherwise arranged, runs extending over more than one seniority district will be manned by trainmen from each of the seniority districts involved proportionately, as near as possible on a mileage basis."

This article they maintained, contemplated the running of crews over more than one seniority district. The Company further claimed the prerogative of setting up assignments according to requirements, providing assignments did not conflict with current rules.

The Board decided that the management was within its rights under the schedule in assigning freight crews to operate between Campbellton and Rivière du Loup, and that crews might be allotted as provided in Rule No. 62.

The percentage of the building dollar that is spent for repairs has increased sharply during the depression, according to the building-permit reports, compiled by the United States Bureau of Labour Statistics. For example, during 1925, the peak year in building operations, only 5.8 per cent of the building dollar was expended for additions, alterations, and repairs, whereas in 1932, a year in which building construction reached a low for a decade, additions, alterations, and repairs accounted for 21.2 per cent of all the expenditures for building operations.

## STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1933

THE following table shows the number of disputes, workers involved and time loss for May, 1933, as compared with the previous month and the same month a year ago.

| Date          | Number of disputes | Number of employees involved | Time loss in working days |
|---------------|--------------------|------------------------------|---------------------------|
| *May, 1933... | 16                 | 1,542                        | 11,927                    |
| *Apr. 1933... | 5                  | 690                          | 4,435                     |
| May, 1932...  | 13                 | 1,823                        | 30,565                    |

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded for May is over three times as large as that shown for April, 1933, the number of workers involved and the time loss incurred showing similar increases above the previous month when no disputes of any magnitude occurred. As compared with May, 1932, an increase occurred in the number of disputes recorded, but the number of workers involved and the time loss incurred were substantially less than that recorded for the same month last year, when strikes involving some 1,200 coal miners in Alberta caused a time loss of approximately 25,000 working days.

Two disputes, involving 165 workers, were carried over from April, and fourteen disputes commenced during May. Of these sixteen disputes, ten were terminated during the month, three being in favour of the employers concerned, three in favour of the workers involved, and compromise settlements being reached in four cases. At the end of May, therefore, there were six disputes in progress recorded as strikes or lockouts, namely: coal miners, Drumheller District, Alta.; compositors, Winnipeg, Man.; salmon fishermen, Vancouver Island, B.C.; building trades, Halifax,

N.S.; masons and plasterers, Hamilton, Ont.; and electrical workers, Hamilton, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to eight such disputes, namely: photo engravers, Toronto, Ont., commencing March 23, 1931, one employer; photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; compositors, Regina, Sask., November 21, 1931, one employer; motion picture projectionists, Winnipeg, Man., February 28, 1932, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; lithographers, Toronto, Ont., April 15, 1932, one employer; motion picture projectionists, Toronto, Ont., February 6, 1933, one employer; and motion picture projectionists, Saint John, N.B., March 6, 1933, one employer. The dispute involving women's clothing factory workers employed in one establishment in Toronto, Ont., commencing February 7, 1933, and added to the above list last month, is reported to have lapsed during May and has consequently been removed from the list.

A dispute involving upholsterers employed by one furniture manufacturing company at Montreal, P.Q., as from April 24, 1933, was reported to the Department too late for inclusion on the May issue of the LABOUR GAZETTE. It is reported, however, that some twenty-five upholsterers and helpers ceased work to enforce a demand for the recognition of the Furniture Workers Industrial Union and for an increase in certain piece rates. Negotiations between the parties resulted in the resumption of work on May 29, at a slight increase in piece rates for certain lines, no recognition of the union, however, being granted.

A minor dispute involving six cutters employed by one men's clothing manufacturing company in Toronto, Ont., is reported as occurring on May 17, 1933. The strikers, members of the Amalgamated Clothing Workers of America, ceased work in protest against a fine imposed on one of their number for faulty work. Work was resumed at noon, and the matter was dealt with the same day by the Board provided for under the agreement with the union, the chairman being Mr. H. G. Fester, a member of the Ontario

## STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1933\*

| Industry,<br>occupation and locality   | Number<br>of<br>workers<br>involved | Time<br>loss in<br>working<br>days | Remarks  |
|--|-------------------------------------|------------------------------------|--|

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

Minimum Wage Board. The Board reached the decision that the fine should be refunded, but that, as the men had ceased work contrary to the terms of the agreement, a fine of \$5 should be imposed on each striker.

In the coal mines in the Glace Bay District in Nova Scotia a number of miners demanded a holiday on May 1, and this not being granted by the operating company, some of them did not report for work and picketed the mines, trying to induce the other miners to abstain from work. In this they are reported to have had little success, and none of the collieries was prevented from operating or experienced serious absenteeism.

A cessation of work on May 12, 1933, by riggers in a logging camp at Hillcrest, B.C., on Vancouver Island, was reported in the newspapers, but definite information had not been secured as this issue went to press. The report was that sixty employees ceased work demanding the withdrawal of a wage reduction of twenty per cent.

Disputes involving men on unemployment relief work, not paid wages but receiving subsistence for which some work is performed or may be required, are not included in the record as no relation of employer and employee is involved.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**COAL MINERS, DRUMHELLER DISTRICT, ALTA.**—The dispute involving employees in a number of the mines in the district surrounding Drumheller, commencing April 24, 1933, is reported as unternminated at the end of May. The employers had reduced wages to the same extent as in the mines operated under agreement between the operators and the United Mine Workers of America, approximately twelve per cent, owing to the low prices for coal. Members of the Mine Workers' Union of Canada ceased work. As the mines were closed down or operating with reduced staffs with the approach of the summer season, the number of employees affected is somewhat uncertain, but is reported as 150 during May.

**FISHERMEN (SALMON TROLLERS) VANCOUVER ISLAND, B.C.**—Salmon trollers, 250 in number, employed by three firms on the west coast of Vancouver Island, on May 16, 1933, being called out by the Fishermen's Industrial Union, ceased work in sympathy with salmon fishermen in Oregon and Washington, U.S.A., in order to curtail the supply of fish which are marketed fresh. The latter had been on strike since May 1, 1933, for an increase in rates for spring salmon. Gill net fishermen and seiners did not cease work. Fishermen

in other parts of British Columbia did not join in the strike which was not authorized by the other unions. At the end of May the dispute was reported to be unternminated.

**COAL MINERS, PRINCETON, B.C.**—Coal miners, members of the Mine Workers' Union of Canada, became involved in a dispute resulting in a cessation of work on May 1, 1933, the management of one colliery having proposed a ten per cent reduction in the wages under a signed agreement expiring December 1, 1933, on the ground that trade conditions did not justify the higher rates during the summer months. After conferences between the parties a secret ballot was taken, the miners voting against the reduction. On May 8 the management suspended operations, the employees alleging a lockout. Further negotiations between representatives of the union and the management, however, resulted in a settlement. The miners agreed to a modification in the rule as to seniority in employment and undertook not to demand a wage increase on the expiring of the agreement. Work was resumed on May 19.

**COAL MINERS, NEW WATERFORD, N.S.**—A dispute as to a change in a local contract rate for shooters and loaders resulted in 470 coal miners employed in one colliery ceasing work on May 8, 1933. Under the terms of the agreement with the United Mine Workers of America thirty days' notice of the change, effective May 1, had been given but negotiations had not been completed by May 8. The employer contended that the special conditions on which the rate had been determined no longer existed. A number of the miners tied up the mine for one shift, the second shift refusing to cease work. The negotiations as to the change in the rate were then completed, a compromise on the reduction being reached.

**COAL MINERS, WESTVILLE, N.S.**—Employees in one mine ceased work on May 16, 1933, in protest against a change in the work of one employee. The management, which had not been informed previously of the trouble, agreed to discuss it when work was resumed. This was done the following day and the complaint was dropped.

**COAL MINERS, BLAIRMORE, ALTA.**—The employees in one colliery who were members of the Mine Workers Union of Canada ceased work for one day on May 25, protesting that the management was discriminating against their members in giving employment, favouring members of a local organization, the Blairmore Miners' Association. The members of

this union continued to work. As a result of a conference work was resumed the next day, a satisfactory arrangement having been reached.

**WOMEN'S CLOTHING FACTORY WORKERS, WINNIPEG, MAN.**—Some sixteen cloakmakers, members of the Industrial Union of Needle Trades Workers, employed in one establishment manufacturing women's clothing, on May 2, 1933, ceased work demanding the abolition of the contracting system under which the establishment was operated. They also requested a minimum increase of \$1 per week in wages rates, recognition of a shop committee, and the reinstatement of one worker who had been discharged. The employer involved is reported to have agreed to all these demands and work was resumed the following morning, the dispute having lasted only one-half day.

**WOMEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—Employees in one shop manufacturing women's clothing ceased work on May 12, 1933, demanding the reinstatement of a member of their organization, the Industrial Union of Needle Trades Workers and the dismissal of the person who had replaced him. The demands of the strikers were granted and work was resumed on May 19. Earlier in the month the employees had secured increases in wages as a result of negotiations during which work was suspended, apparently by arrangement.

**SPINNERS (ARTIFICIAL SILK), DRUMMOND-VILLE, P.Q.**—Sixty-six spinners employed by one company engaged in the manufacture of artificial silk ceased work at 10 a.m. on May 13, 1933, demanding an increase of twenty-five per cent above the rates received in their department, which ranged from 25 cents to 27 cents per hour on a fifty-six hour week basis, with an additional bonus of \$10 per month. During negotiations prior to the cessation of work the employer had agreed to investigate several minor complaints and had offered a bonus system estimated to be equivalent to a ten per cent increase. As a continuation of the strike would have involved closing the plant, affecting 1,700 employees, the local clergy and municipal authorities induced the strikers to return to work, ten of the leaders, however, being replaced.

**PLUMBERS, MONCTON, N.B.**—Eight plumbers ceased work on May 1, 1933, protesting against a reduction in wages from 80 cents per hour to 50 cents proposed by the master plumbers' organization on the expiration of the agree-

ment. Conferences between officials of the employers' association and the union resulted in the resumption of work on May 9, 1933, and later an agreement was signed providing for a rate of 70 cents per hour for one year.

**BUILDING TRADES, HALIFAX, N.S.**—The agreements between the various building trades unions and the contractors' association expiring on April 30, 1933, the employers had proposed substantial reductions in wages. These changes were not agreed to by the unions involved, and electricians, bricklayers and painters refused to work at the lower rates on May 1. The carpenters, plumbers and other trades continued to work under protest pending a settlement. As very little building construction was under way only a small percentage of the 1,700 workmen in the various classes were involved in a cessation of work. Conferences between the union representatives and contractors did not result in a settlement by the end of the month. Early in June the electrical workers reached an agreement providing for a reduction in wages from 85 cents per hour to 80 cents instead of 70 cents as proposed by the contractors, and this class is reported to be that chiefly affected, there being thirty journeymen and twenty helpers involved.

**MASONS AND PLASTERERS, HAMILTON, ONT.**—The agreements between the unions and the contractors' association expiring at the end of April, the latter had proposed reductions for bricklayers and stonemasons from \$1.10 per hour to 90 cents, for tilesetters from \$1 per hour to 80 cents, and for plasterers from \$1 per hour to 90 cents. These not being agreed to by the unions, cessations of work occurred May 1, 1933. At the end of the month settlements had not been reached, but early in June it was reported that the plasterers were accepting the rate proposed by the contractors.

**ELECTRICAL WORKERS (BUILDING TRADES), HAMILTON, ONT.**—Electricians, eighteen in number, employed by eight firms in Hamilton, ceased work on May 15, 1933, as a result of a reduction from 95 cents per hour to 75 cents proposed by the contractors on the expiration of the union agreement on April 30, 1933. Conferences were held between the parties involved; but only two employers agreed to pay the rate of 85 cents per hour, with a forty hour week, demanded by the union. At the end of the month no termination had been reported.

**SHIPYARD WORKERS, NEW WESTMINSTER, B.C.**—On May 8, 1933, a number of the workers employed by three shipbuilding com-

panies ceased work demanding a ten per cent increase in wage rates to \$5.25 per day for caulkers and shipwrights and 40 cents per hour for labourers. The number of workers involved is reported as twenty-three, some of whom apparently did not cease work. The strikers were under the leadership of the Workers' Unity League which elected a strike committee and picketed the plants. From time to time, however, the strikers returned to work and by May 12 all had resumed work at rates as prior to the stoppage.

**COLD STORAGE WORKERS, WINNIPEG, MAN.—** Employees in a cold storage plant in Winnipeg were involved in a cessation of work for one-half day on May 27, 1933, owing to a dispute as to payment for overtime work. The matter in dispute was adjusted in a short time, and work was resumed in the afternoon, a satisfactory arrangement having been reached. During the strike, however, the plant had been picketed by some 300 sympathizers, three of whom were arrested for attempting to prevent trucks from entering or leaving the premises.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1933, in the review of Strikes and Lockouts in Canada and Other Countries, 1932. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the Government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

Revised figures for the year 1932 give the number of disputes beginning in the year as 389, the number of workers involved in all disputes in progress during the year as 382,000 and the total time loss for the year as 6,488,000 working days.

The number of disputes beginning in April, 1933, was 22, and 12 were still in effect from the previous month, making a total of 34 disputes in progress during the month, involving 14,000 workers with a time loss of 104,000 working days for the month. Of the 22 disputes beginning in April, 3 were over proposed reductions in wages, 5 on other wage questions, 8 on questions respecting the employment of particular classes or persons, 5 on other questions and one was due to sympathetic action. Settlements were reached in

26 disputes, of which 4 were in favour of workers, 8 in favour of employers and 14 were settled by compromise; in one other dispute, work was resumed pending negotiations.

### France

The lockout in certain motor-car factories in Paris which began March 30 and was noted in the last issue of the LABOUR GAZETTE was terminated April 24. Although certain minimum wage rates were guaranteed, the wage reductions agreed upon averaged about 12 per cent.

A dispute involving 6,000 weavers at Armentières which began January 4, against reductions in wages and the introduction of the four looms per weaver system, was settled April 24 by the adoption of this system under certain conditions and with a reduction in wage rates of 5 per cent.

### British India

The number of disputes beginning in the year 1932 was 116 and 2 were still in progress from the previous year, making a total of 118 disputes in progress during the year, involving 128,099 workers with a time loss of 1,922,437 working days for the year. Of these 118 disputes, 68 were over wages questions, 3 over bonus questions, 31 over personnel, 2 over leave and hours, and 14 over other questions. Settlements were reached in 115 disputes, in 14 of which the workers were successful, 27 partially successful and 74 unsuccessful.

### United States

The number of disputes beginning in March was 88 and 50 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 8,761 and the time loss 333,827 working days for the month.

A strike of about 1,500 shoe workers at Lowell, Massachusetts, lasted seven weeks and terminated May 29, when employers agreed to recognize the union and grant a 10 per cent increase in wages.

A two-day strike of 5,000 ladies' garment workers at Philadelphia, Pennsylvania, was terminated May 11 when employers granted union recognition, a 44-hour week and a 10 per cent wage increase.

About 7,800 cotton textile workers at Manchester, New Hampshire, were on strike from May 19 to May 29, when they succeeded in

securing an increase in wages of 15 per cent, thus partly restoring the decreases made earlier in the year.

A strike of 4,000 gill net salmon fishermen of the Columbia river, Oregon and Washington, who were joined by 1,000 cannery workers, was in effect from May 1 to May 16, when a compromise was reached as to the price to be paid for fish. Fishermen of the trolling vessels were also on strike during May and no settlement has been reported for them. A sympathetic strike of British Columbia trollers is noted in the previous article in this issue.

## CONCILIATION AND ARBITRATION IN INDUSTRIAL DISPUTES

A RECENT publication of the International Labour Office (Geneva) gives the results of a comparative study of systems for conciliation and arbitration in about fifty countries.\* The primary purpose of the Office has been to compile a general study from the international standpoint of machinery for the prevention and settlement of labour disputes, a subject which has been suggested for the agenda of an early session of the International Labour Conference. The volume presents: (1) a comparative analysis of the legislation in the different countries providing means for the adjustment of disputes between employers and employed and (2) a series of monographs showing the law in force in each of these countries.

While the purpose of conciliation and arbitration in all countries is to reconcile the conflicting interests of an employer or group of employers and groups of employees, there is a fundamental difference of principle underlying the methods for settling labour disputes separating the countries into two groups.

"On the one hand we find systems which are intended merely to strengthen the desire for an understanding between the parties and help them to an agreement, either with or without State aid. This may be called voluntary conciliation. On the other hand, there are systems which under certain conditions, generally after voluntary conciliation has failed, provide for compulsory State intervention in fixing working conditions and supervising the maintenance of industrial peace. These may be called compulsory arbitration systems. It will be seen later that each type exists in many varieties with a number of intermediate forms.

"In most States, when efforts were first made to prevent and settle trade disputes, the initial step was based on the principle of conciliation. . . . Great Britain was the first country in which conciliation on a voluntary basis was extensively developed, being supplemented

and encouraged in many directions, although not entirely systematized by certain State institutions. It is probably due to the traditional distrust which the English-speaking countries, such as the United States of America and Canada (although with certain reservations in this latter case), have adhered strictly to the principle of conciliation. The legislation in the Union of South Africa, although obviously modelled on the Canadian system, departs from this principle in several essential points, while in Australia and New Zealand the emphasis has throughout been laid on compulsory arbitration. Among the other countries which have maintained the principle of conciliation mention may be made of Austria, Belgium (with a reservation to be referred to later), Czechoslovakia, Denmark, France, Japan, the Netherlands, Poland, Sweden (special regulations for collective disputes on rights) and Switzerland.

"The other countries which have regulated their conciliation and arbitration systems have to a greater or less extent applied the system of State intervention, either as an exceptional measure (e.g., only in public utility undertakings, or for disputes affecting the community as a whole) or as a general rule. The chief of these countries are Australia, with most of its separate States, Germany, Italy, New Zealand, Rumania and Russia."

The difference between the methods of conciliation, arbitration and special inquiry is emphasized, although the procedure often moves from one stage to another without much interruption. At all stages of conciliation and arbitration,

"a clear recognition of the facts, and particularly of the economic situation and the respective strength of the parties to the dispute, must be of great importance. In the English-speaking countries particularly it has been realized that in complicated cases it is difficult to obtain such a knowledge of the facts in the course of the conciliation or arbitration procedure, and consequently, if a thorough enquiry appears necessary, a special procedure is applied by which the actual situation can be clearly brought to light by unbiased observers. This enquiry procedure may be instituted when conciliation proves fruitless. It is also possible, however, even after arbitration has failed and the parties

\* Conciliation and Arbitration in Industrial Disputes, 1933, Studies and Reports, Series A, No. 34. 696p.

refuse to accept the award. The purpose of this procedure is usually to make the facts of the case known to public opinion, which can then decide for itself. This means that a certain pressure is brought to bear on the parties which may lead them to an agreement or which may pave the way for fresh attempts at conciliation or arbitration. Such further attempts will be based on the objective facts revealed by the enquiry; the atmosphere will be calmer and there will be greater chances of success."

The Canadian Industrial Disputes Investigation Act is stated to be the outstanding example of legislation providing for special inquiry by a board made up of representatives of the two parties and an independent chairman. In Canada, too, are found other types of conciliation and arbitration. Collective agreements usually provide for some means of settlement of individual or collective grievances and in some cases for arbitration of the matters in dispute. Although this independent machinery is not so highly developed in Canada as in Britain, it may be mentioned that it is general in industries with strong trade unions such as in printing, coal mining, clothing and boot and shoe trades. More highly developed systems organized by employers and unions are those of the Boards of Adjustment set up by the railway companies and railway labour unions for the settlement of difficulties arising in the application or interpretation of an agreement. Great Britain, the United States, Canada and perhaps South Africa are the principal countries which belong to the group of countries in which

"the weight of responsibility for the avoidance and settlement of labour disputes lies on the independent machinery of the parties concerned. . . . In these countries the working of independent conciliation and arbitration machinery takes precedence of that of the State as a matter of course."

After these independent systems comes the first step in state intervention in labour disputes which consists in putting a government officer with experience in industrial disputes at the disposal of the parties on the request of one or both of them. This method, widely used in English-speaking countries, is provided for by the Dominion Department of Labour under the Conciliation and Labour Act and special officers are employed for that purpose. Similar provision is made under legislation in Quebec, Ontario, Manitoba and Alberta and in the other provinces officials may proffer their services in bringing about a settlement.

When such informal methods of conciliation fail, provision has been made in the law of most countries for permanent machinery which may be set in motion on the application of one or both parties to a dispute or by the government. The Canadian provisions governing the applications for boards of conciliation and investigation are set out in full in the

International Labour Office publication as being to a certain extent typical of the requirements in countries laying down exact regulations on this point such as New Zealand, the Netherlands and Italy.

"Although the Canadian Act does not make the decisions of the conciliation and investigation boards binding, and provides no penal sanctions for their enforcement, the powers of the boards are so far-reaching that special formalities for the opening of the proceedings—that is, for the appointment of a board—seem nevertheless justified."

Under the heading "Obligation to notify disputes and to apply for settlement; suspensive prohibition of strikes and lockouts," the following paragraphs deal with the distinguishing feature of the Industrial Disputes Investigation Act, the prohibition of a stoppage of work until the dispute has been investigated and reported on by the board set up for that purpose.

"In a number of countries open disputes (lockouts and strikes) are explicitly forbidden and deemed to be illegal until all the possibilities of conciliation and arbitration have been exhausted. In countries where they are in any case completely or partially forbidden, it is natural that they should also be prohibited during the official attempts to bring the parties to a settlement. Such important limitations of the freedom of action of trade organizations cannot but have an effect on the conciliation and arbitration proceedings—an effect which is usually expressed in an obligation to give notices of differences or to apply for settlement, either specified or implicit in the law.

"The most familiar regulations on the subject are those of the Canadian Act of 12th June, 1925 (amending the original Act of 1907)\*, which has obviously had an effect on other legislation, notably that of South Africa and New Zealand. . . .

"The Act thus provides for a suspensive prohibition of open disputes, and of changes in labour conditions, in which connection it imposes an obligation to give notice at least thirty days before the proposed changes in conditions and to apply for the appointment of a conciliation and investigation board. The fulfilment of these regulations is indirectly guaranteed by the provision of penalties for the infringement of the prohibition of open disputes. . . .

"Similar regulations are to be found in the legislation of Belgium, India, the Netherlands, New South Wales, New Zealand, Norway, Queensland, Roumania, South Africa and Western Australia, and of Germany in virtue of an Emergency Order issued by the President on 10th November, 1930, and equally valid with the actual Conciliation Order. The regulations naturally vary greatly, in respect of the disputes to which they apply, the definition of lockouts and strikes on which they rest, the period during which open disputes are forbidden, and the civil, criminal and other consequences of infringement. . . .

\*Statute of 1925 involved no change of principle from the Act of 1907; it was necessary in order to conform to the judicial decision as to the legislative powers of the Dominion Parliament.

"The obligation to give notice of proposed action and to apply to a conciliation and arbitration institution, together with the related problems dealt with above, called for this comparatively thorough discussion, for in most cases it entails the first important measure of compulsion in the proceedings—a suspensive prohibition of strikes and lockouts, the observance of which is secured by penalties and other disadvantages. It need hardly be pointed out that this is a very important measure, since it limits the freedom of the parties to engage in militant action at the moment they consider most favourable. The consideration on which it is based, namely, that a settlement after the outbreak of an open conflict is for economic and psychological reasons usually much more difficult than before, certainly carries weight. Nevertheless, it is open to question whether the prohibition of open conflict, even for a limited period only, is the most efficacious method of dealing with the difficulty. In any case one point already touched on must be remembered: an unwise use of the prohibition can lead to great injustice towards one or other of the parties, which may, by the tardiness of the proceedings, be deprived of what would have been at a certain moment favourable chances of success. That the danger of injustice can be completely averted by suitable safeguards has been disputed, particularly by the workers, who have therefore viewed such prohibitive measures with no favourable eye and frequently opposed them.

"It must nevertheless be emphasized that such temporary prohibition of open disputes is to be sharply distinguished in principle from a general prohibition of all open disputes combined with compulsory enforcement of the awards of the conciliation and arbitration institutions. The former merely serves to ensure that the institutions will be utilized by the parties to disputes before they begin hostilities, while the latter deprives them completely of their freedom to engage in militant action and leads as a rule to State regulation of all labour conditions. While in most countries the legislature has hesitated to engage itself in these far-reaching consequences—to be described in detail later—it has often thought it useful and important to ensure that parties shall exhaust the possibilities of settlement through the institutions created for the purpose of maintaining industrial peace before they are permitted to take the law into their own hands. It is therefore comprehensible that in the many countries in which a reform of the conciliation and arbitration system is now under consideration, the question of the suspensive prohibition of open disputes as described above is being given considerable attention."

As to the nature and scope of the decisions of conciliation and arbitration Boards, a clear distinction is drawn between countries which have conciliation and arbitration systems in which there is some element of compulsion, such as a compulsory award, and those in which conciliation is merely voluntary.

"In systems founded on the principle of conciliation, in which the State does not intervene authoritatively, the scope of the decisions of conciliation and arbitration institutions—in so far as the expression "decisions" in the legal sense can be used in such cases—is limited to the actual parties to the dispute. The parties'

acceptance of a conciliation proposal, which in these systems is never binding, or their agreement in advance to accept an arbitration award, which only thus becomes binding, entails obligations in fact or in law for them alone.

"On the other hand, in systems under which the authoritative regulation of the relations between the parties through the intervention of the State is permitted or customary and the decisions arrived at in the proceedings thus are or can be made binding on the parties, the scope of the decisions is also correspondingly widened quantitatively; either during the proceedings or by a subsequently separate decision it is or may be extended to comprise persons not actually parties to the dispute."

Certain considerations of a general nature are discussed with a view to throwing light on the reasons for the kind of system adopted by different countries for the settlement of labour disputes.

"It is apparent that the conciliation and arbitration systems which now exist have been carefully adapted to and grafted on to the general legal and economic systems of the States in which they are in force. Three types of function have been distinguished which conciliation and arbitration undertake in accordance with the nature of each national system; these are the maintenance of industrial peace, assistance in the determination of relations between employers and workers by means of collective agreements, and the authoritative regulation of labour conditions.

"It is plain that States whose constitution and legal system are still based to a great extent on the *laissez-faire* principle possess conciliation systems which occupy themselves largely or exclusively with the first type of function, namely, peace-making. Great Britain and the other English-speaking States, except Australia and New Zealand, belong to this group. In these countries the decisions, which are in reality only mediating proposals, are never compulsory unless arbitration has been previously arranged by the parties. It is significant that these States have no legislation on collective labour agreements.

"Next, most of the industrially important States on the Continent of Europe, such as Austria, France, the Netherlands, Norway, Sweden, etc., have incorporated in their legal systems—originally built up on the individualist principle—certain elements of collective law, the chief of them, in the present connection, being concerned with collective labour agreements. The systems of these countries have thus assumed the second type of function, the determination of collective relations, though this is usually implicit rather than specified. They do not, it is true, recognize compulsory decisions, but they go further than the States of the first group, for the arrangements made by mediation are, as collective agreements, binding at least in civil law in some way or other, while in the English-speaking countries they are simply 'gentlemen's agreements.' The determination of collective relations is thus clearly one of the functions of conciliation and arbitration in the States of the second group. . . . .

"By declaring awards binding, the arbitration institutions assumed the third function of conciliation and arbitration—the regulation of labour conditions. . . . The systems in which

this third function of conciliation and arbitration is fully developed and applied go further (Italy, Russia, Australia, New Zealand). In Italy and Russia this function—the authoritative determination of labour conditions in cases where free negotiation appears contrary to public interest—is logically in keeping with the whole legal and constitutional system of the two States.

"In Australia and New Zealand the exercise of the function by conciliation and arbitration institutions cannot be characterized so simply. As has been noticed it is connected with the minimum wage legislation usual in these States, that is to say, with State machinery, based on collective law, for the authoritative settlement of certain of the questions dealt with by conciliation and arbitration. In other respects, however, judicial principles and practice in these States seem still to be inspired by the *laissez-faire* attitude, as in the other English-speaking countries. This is perhaps the real reason why the persons concerned have so severely criticized the Australian and New Zealand compulsory arbitration systems, especially of late, and why the systems, particularly those of Australia, are so constantly being altered. These events appear to justify the conclusion that the general legal and industrial systems of these countries are not yet fully compatible with compulsory arbitration.

"On the whole, the above considerations tend to the conclusion that a country's conciliation and arbitration system has the best chance of success if it is essentially in keeping with the general legal system of that country. In many cases where, despite such an apparent accordance, the existing system does not seem to give complete satisfaction, this is—apart from criticisms directed against its working in individual cases—perhaps due to the fact that the legal system is itself in course of transformation and has not been able to adapt itself satisfactorily

to the wide social and economic changes which are now taking place. . . .

"However right or wrong the reasons given by the parties concerned for and against compulsory arbitration may be—and this is not the place to decide the question—and however the battle between the individualist and the collectivist form of economic organization and so the dispute on the arbitration principle, may end, one fact emerges clearly from a review of the various systems: everywhere, even in countries with fully developed compulsory arbitration, voluntary conciliation between the parties is regarded as the first object, while compulsion is held to be an evil even where recourse to it is the rule. It should be remembered that in all systems where such a thing is possible the creation of voluntary conciliation and arbitration institutions is encouraged; that as a rule these have precedence over the State machinery; and that even in countries with compulsory arbitration such as Australia and New Zealand, more and more importance has of late been attached to the conciliation bodies and commissioners appointed, many of them in the recent past, to supplement the arbitration courts. . .

"The conciliation and arbitration systems of all countries represent one consistent effort to guide employers and workers—in their own interests and in that of society—towards peaceful methods in their struggle for a share of the product of labour—a struggle which is a manifestation of the life instinct in man and therefore inevitable; to show them that they need one another however natural the antagonism between them, and that they must meet in some form of productive collaboration if they are to live. Conciliation and arbitration are thus a symbol of that ideal of the community of interest between workers, employers and society which is the basis of modern labour law and also of the constitution of the International Labour Organization."

### Canadian Engineering Standards Association

The Canadian Engineering Standards Association is at present considering replies received from all parts of Canada to a questionnaire dealing with the proposed national standard of brick sizes. Suggestions for revisions of the present cement specifications are being considered.

At a recent meeting a draft Canadian Safety Code for Passenger and Freight Elevators was presented and this code is now being considered by the Association.

It is stated that provincial Electrical Code committees are now operating in all the nine provinces of Canada. "Through their agency it will be possible to secure the long-desired uniformity in electrical regulations throughout the Dominion."

Referring to the recent organization of the National Construction Council of Canada (LABOUR GAZETTE, March, 1933, page 283) the

C.E.S.A. Bulletin says:—"A most interesting movement has been inaugurated by the various engineering, architectural and construction interests in which some eighteen organizations are participating, leading to a revival of the construction industry. As a result of a recent conference the National Construction Council of Canada has been organized and representations have been made to the Dominion Government to encourage the construction of federal, provincial and municipal buildings. It is also suggested that a Construction Finance Corporation be established under the auspices of the Dominion Government with the purpose of passing on the merits or necessity of construction projects and of assisting them by banking services or by direct financing. This is a movement which should meet with every encouragement and merits the hearty endorsement of the C.E.S.A."

## LABOUR LEGISLATION ENACTED BY THE PARLIAMENT OF CANADA AND THE LEGISLATURES OF ONTARIO AND SASKATCHEWAN IN 1933

### Parliament of Canada

THE following is a short summary of the laws of labour interest enacted by the Parliament of Canada during the recent session which opened on October 6, 1932 and closed on May 27, 1933.

The Relief Act was printed in the *LABOUR GAZETTE*, for April, page 402.

#### Canada Shipping Act

Amendments to the Canada Shipping Act are designed to give effect to two Draft Conventions of the International Labour Conference at Geneva, viz., the Draft Convention concerning protection against accidents of workers employed in loading and unloading ships, adopted in 1932, and the Draft Convention relating to the marking of heavy packages, adopted in 1929. With regard to the 1932 Convention, the amending Act provides for the appointment of inspectors of ships' tackle, and authorizes the Governor-General in Council to make regulations for the protection against accident of workers employed in loading and unloading ships, having particular regard to the strength of machinery, tackle and gear and their fitness for the purpose for which they are intended; the provision of safe gangways, stagings, etc., protection in the way of rails, etc., at openings through decks and around wharves and docks; illumination of holds and decks of ships and of docks or wharves at which ships may be loading or unloading; and provision of means for attending to persons injured. Inspectors are empowered to go at all reasonable times on board any ship or on any wharf or dock at which any ship is, for the purpose of loading or unloading, alongside, and to demand reasonable assistance and pertinent information from the owner or master of the ship or from the person in charge of the loading or unloading. If an inspector is of the opinion that any person is exposed to undue risk on account of the condition of any machinery, tackle, stagings, etc., or on account of the way in which the operation is being carried on, or that regulations are not being complied with, he shall order the cessation of operations. Penalties are provided for breach of the regulations, for obstruction of, or refusal of reasonable assistance or pertinent information to, an inspector, and for continuing operations after orders to cease.

To implement the 1929 Convention provision is made that no person shall, in Canada, consign to be loaded, and no master, owner or agent of a ship shall cause or permit to be loaded on any ship in Canada, any package or object of a gross weight of 2,240 pounds or over, without causing the weight to be plainly and durably marked on such package or object. Where the exact weight would be difficult to ascertain the approximate weight is to be given and stated to be approximate. A penalty is provided for contravention of this section. All of the above provisions are to come into force on Proclamation and until they are proclaimed the existing sections relating to inspection of ships' tackle are to remain in force. These provide that the inspector of hulls and equipment may examine the tackle, machinery and apparatus for loading or unloading a ship and if he considers such defective, so as to endanger life, he shall report to the Minister of Marine, who may order that they shall not be used until further order, under penalty.

The amending Act further authorizes the Governor-General in Council to make regulations prescribing the manner in which grain cargoes and deck cargoes may be carried on any British ship registered in Canada, or on any ship not registered in Canada which may be within any port in Canada.

#### Other Legislation

The Penitentiary Act was amended to provide that an officer retired on account of injury shall not receive a gratuity therefor in addition to his retiring allowance if he is also receiving compensation for the injury under the Government Employees Compensation Act.

The Canadian National-Canadian Pacific Act, which provides for co-operation between these two railways, enacts that the section of the Railway Act relating to compensation to employees for financial loss caused by removal, closing, or abandonment of any station or divisional point shall not be deemed to be inconsistent with the provisions of the Canadian National-Canadian Pacific Act.

The Salary Deduction Act, 1932, reducing wages and salaries of government employees, with certain exceptions, by 10 per cent and the provisions of the Income War Tax Act

imposing a special tax of 10 per cent on the excepted persons, were continued in force until March 31, 1934. These provisions were given in the *LABOUR GAZETTE* for June, 1932 at p. 657.

### Ontario

The Ontario Legislature which was in session from February 15 to April 18, 1933, enacted a number of laws of interest to labour. These included new statutes dealing with unemployment relief and land settlement, and amendments to existing laws relating to workmen's compensation, mining, factories, masters and servants, woodmen's and mechanics' liens, minimum wages, vocational education, mothers' allowances and old age pensions.

#### Unemployment Relief

The Unemployment Relief Act provides that the Lieutenant-Governor in Council shall have and shall be deemed to have had full power to authorize the Government of Ontario to make and carry out agreements with the Dominion Government under any Act or Order of the Dominion of Canada respecting unemployment relief, including agreements respecting the Trans-Canada Highway. Orders in Council of September 19, 1932, and March 30, 1933, are confirmed and the Lieutenant-Governor in Council authorized to vary them or pass such additional Orders as may appear necessary to cope with unemployment relief conditions. Agreements between the Province and municipalities for the purpose of taking advantage of any Act of the Dominion or the Province respecting unemployment relief are also confirmed. The Lieutenant-Governor in Council is authorized, as from March 29, 1932, to pay from the Consolidated Revenue Fund or to raise by loan, any sums necessary for carrying out the provisions of the present Act, and also, as from September 19, 1932, to pay from the said fund to any municipality a greater proportion than one-third of such municipality's expenditure for direct relief. Municipalities are also vested with power to provide employment and direct relief and, with the approval of the Municipal Board, to issue debentures for that purpose and to effect temporary borrowings. Certain by-laws for the issue of debentures are confirmed.

The Relief Land Settlement Act validates an agreement between the Government of Canada and the Government of the Province adopting measures for the relief of certain families in the Province by placing them on suitable farms, the expense to be borne by

Two private members' Bills, which were not proceeded with, provided respectively for an eight-hour day in penitentiaries and for the repeal of Section 98 of the Criminal Code dealing with unlawful associations.

the governments of Canada and Ontario and the participating municipalities. Agreements with the municipalities are confirmed and appropriations from the Consolidated Revenue Fund for the purposes of the Act are authorized as from June 24, 1932. The Lieutenant-Governor in Council is empowered to make regulations for the carrying out of the Act. The Agreement between the Dominion and the Province provides that the Dominion shall contribute one-third of an amount not exceeding \$600 per family, the remainder being contributed by the Province and the municipality concerned in the proportion agreed upon between them. The Province is responsible for the administration of relief settlement and must set up an Advisory Committee upon which are representatives of the Dominion Land Settlement Branch and the Colonization Branch of the Canadian National and Canadian Pacific Railways.

#### Workmen's Compensation

An amendment to the Workmen's Compensation Act authorizes the Board to reduce the assessments in the case of an employer whose accident record has been consistently good. This change carries out a recommendation made by the Commissioner, Mr. Justice Middleton, who enquired into the operation of the Act and whose report was published in 1932 (*LABOUR GAZETTE*, April, 1932, page 407). The section of the Act, repealed in 1932 which permitted the Board to adopt a system of merit rating, was re-enacted.

Sections dealing with silicosis were replaced by new provisions defining "silicosis" and "tuberculosis." Workmen disabled from silicosis where no tuberculosis is present are to be compensated on the same basis as workmen suffering from other industrial diseases. Where silicosis is complicated by tuberculosis, however, the basis for total disability is fixed at 50 per cent of average earnings. A workman ceasing to be employed in an industry in which he was exposed to silica dust must establish his claim within two years after leaving such employment or six months after the passing of the Act, whichever period is longer, after which time the claim is barred. The Board may, however, allow any case due-

to uncomplicated silicosis which it considers should in justice be allowed.

The time limit for disposing of outstanding claims is two years from the date of filing claim or six months after the passing of the Act whichever is the longer period.

Upon Proclamation of the Lieutenant-Governor in Council the above provisions relating to silicosis will be applicable also to pneumoconiosis and stone workers' or grinders' phthisis.

### Miscellaneous Legislation

The clause of the Mining Act which required a workman employed underground to have a certificate of freedom from tuberculosis was replaced by a clause requiring a certificate of freedom from diseases of the respiratory organs.

The Factory, Shop and Office Building Act was amended to exempt from inspection any boiler or pressure vessel used in connection with a hot water heating system. The section was repealed which permitted women and young persons to be employed in shops between 7 a.m. and 10 p.m. on Saturdays, the day before a statutory holiday and from December 14 to 24 and limiting the hours of such employment to ten per day and sixty per week. The section was deemed to be inconsistent with another clause of the Act which adequately meets the situation.

An amendment was made to that section of the Master and Servant Act which provided that when an order for the payment of wages is made by a police magistrate in a city such order may be enforced in the manner provided by section 739 of the Criminal Code, that is to say, in default of payment, by distress and sale of the goods and chattels of the defendant, and if sufficient distress cannot be found, by imprisonment for a period not exceeding three months. Imprisonment may be ordered in the first instance in default of payment. The amendment extends the scope of the section to all police magistrates.

The Woodman's Lien for Wages Act was amended to provide that logs or timber may be attached where there is reason to believe

that the debtor is disposing of them with intent to defeat creditors.

An amendment to the Mechanics' Lien Act permits an action to be tried by any officer having jurisdiction whether or not he was the officer to fix the date of trial. It is further provided that where an order is made vacating a certificate of action the lien is thereby discharged.

The Minimum Wage Act was amended to reduce the membership of the Minimum Wage Board from five to three persons of whom one must be a woman.

An amendment, effective January 1, 1934, to the Vocational Education Act provides that the Chairman and two other members of the local board of secondary school trustees, together with a representative from both the public and separate school trustees and one county representative, if any, shall be members of the Advisory Vocational Committee. A further amendment which comes into force on September 1, 1933, corresponds with amendments to the Continuation Schools Act and the High Schools Act and provides that a pupil who, having completed the fourth form course in a public or separate school, has attended any other school or schools for six years, is not entitled to attend a vocational school except on payment of a fee prescribed by the Board.

The Mothers' Allowances Act was amended by the repeal of those sections which dealt with the establishment of the Mothers' Allowances Commission and the enactment of new provisions. These empower the Lieutenant-Governor in Council to change the personnel of any commission established under the Act, to designate and appoint a Commission for the purpose of carrying out its provisions, and to provide for payment of salaries and expenses.

An amendment to the Old Age Pensions Act provides that notice of the granting of an old age pension may be registered against the lands of a pensioner, after which no instrument affecting such lands may be registered without the consent of the Old Age Pensions Commission endorsed thereon.

## Saskatchewan

The labour laws enacted during the session of the Saskatchewan Legislature, which began on February 2 and ended on March 30, 1933, included new statutes dealing with unemployment relief and land settlement, and amendments to acts relating to workmen's compensation, minimum wages, mechanics' liens, masters and servants, weekly rest day, and vocational education.

### Unemployment Relief

Four statutes deal with various aspects of unemployment relief. The Relief Act, 1933, empowers the Lieutenant-Governor in Council to make agreements with the Government of Canada and with cities, towns and villages respecting relief measures, to contribute to any city, town or village an agreed proportion

of the costs of such measures, and to undertake such measures alone, with the Dominion Government, or with the cities, towns and villages. Methods of financing are outlined. The Act expires on March 31, 1934, but obligations incurred under it will remain valid until discharged.

The Municipalities Relief Act, 1933, authorizes the making of agreements between the Saskatchewan Relief Commission and rural municipalities whereby the municipality will repay an agreed percentage of the total amount expended by the Commission in providing relief in the municipality in the form of food, fuel, clothing, feed and fodder. Applications for relief are to be received by the municipality and forwarded with its recommendations to the Commission for approval. The municipality will also take a lien agreement from each recipient of relief. Municipalities are empowered to pass by-laws for the carrying out of such agreements. The Act further, as from September 1, 1932, ratifies all lien agreements entered into by municipalities, provides for their registration with the registration clerk for chattel mortgages and with the registrar of the land titles office, and for the recovery of sums due under such agreements. As from October 1, 1932, councils of rural municipalities are authorized to borrow money to purchase food, fuel, fuel oil, clothing, feed, fodder and binder twine to be supplied to persons unable to purchase them. Provision is made for the taking of lien agreements from recipients of such relief, for their registration, and for the recovery of sums due thereunder.

Under an amendment to the Relief Act, 1932, where the proceeds of a special assessment levied by a city for relief works exceed the cost, the excess is to go into a general local improvement fund. City councils may borrow money to defray the cost of a relief work and may levy a special assessment on property abutting on such work. Relief works undertaken by cities either before or after April 13, 1932, the date of the coming into force of the Relief Act, 1932, are legalized.

Amendments to the Saskatchewan Relief Commission Act deal with liens which the Commission will hold on crops of persons receiving relief. Liens for supplies advanced by the Commission will cover all crops grown by such persons until the price and interest is fully paid.

An Act for ratifying a Certain Agreement with the Dominion and for Other Purposes, ratifies an agreement of June 6, 1932, between the Government of Canada and the Government of the Province similar to the Agreement

validated by the Ontario Relief Land Settlement Act. (See page 598.)

### Workmen's Compensation

The Workmen's Compensation (Accident Fund) Act was the subject of a number of amendments. The definition of employer was amended to include a trustee, receiver, liquidator, executor, administrator and any person appointed by a court or a judge who has authority to carry on an industry. An employer who defaults in reporting or furnishing particulars of an accident is made individually liable for medical aid as well as for compensation, and an employer who neglects or refuses to transmit a payroll or other return or to pay an assessment is liable for the capitalized value of medical aid as well as of compensation. The Board is empowered to suspend or divert compensation awarded to a widow who neglects the infant dependents of the deceased workman. Workmen's Compensation commissioners may be removed from office on address of the Legislative Assembly. They are granted the same privileges and immunity as judges of the Court of King's Bench for any act done or omitted in the execution of their duties. The sections dealing with admission of excluded industries were replaced by new sections which provide that an employer in an industry in a withdrawn or excluded class may make application to the Board to have such industry included in Schedule I. If the Board approves the industry will be admitted, at such time, on such terms and conditions and for such period as the Board may determine. Application may be made by a workman on similar conditions. Every employer must obtain from the Board, and post in a conspicuous place in his establishment, a certificate to the effect that he has made and furnished to the Board the required wage statements. Notice of the granting of building permits in rural municipalities, as well as in cities, towns and villages, must be sent to the Board within three days. The clause which permitted the Board to make remuneration for such statements out of the accident fund is repealed. The power of the Board or its representatives to make inquiries and take affidavits, etc., relating to wage statements is extended to apply to any inquiry or affidavit required by the Act. That clause was repealed which provided that nothing in the section dealing with industrial diseases shall affect the right of a workman to compensation in respect of a disease to which the section does not apply if the disease was the result of an injury in

respect of which he was entitled to compensation under Part I. As from July 2, 1930, employers and workmen excluded by regulation from the operation of, as well as those not included in Part I, have the same rights and obligations at common law and under the Workmen's Compensation Act as though the Workmen's Compensation (Accident Fund) Act had not been passed.

### Miscellaneous Legislation

The Mechanics' Lien Act was amended to provide that a lien may be discharged by a receipt signed by a trustee in bankruptcy, verified by an affidavit and duly registered.

The Masters and Servants Act was amended to provide that if the master or employer resides in a rural municipality, proceedings under the Act may be taken before a Justice of the Peace residing either in such municipality or district or in a city, town or village situated within or partly within the outer boundaries thereof.

An amendment to The One Day's Rest in Seven Act provides that where an establishment wherein an industry is carried on is outside a city the Act shall nevertheless apply to employees engaged in work in connection with such industry if such work is done either wholly or partly within a city. The definition of "employee" is amended to provide that the expression "owner or part owner" shall not include an employee who is a shareholder.

The Vocational Education Act was amended to require applicants for admission to a day school to hold grade VIII or equivalent standing unless the board of trustees directs otherwise. The membership of the Vocational Education Committee is reduced from ten to eight of whom five are to be members of the board and one an employer of labour nominated by the council of the city or town. The remaining two are to be employees nominated by such local organizations as the board may determine. An organization meeting of the Committee is to be held in January of each year.

An amendment to the Game Act authorizes the Lieutenant-Governor in Council to make regulations governing certain matters including the licensing of guides.

In the revision of the Public Vehicles Act the sections dealing with chauffeurs were practically unchanged.

Amendments to the Vehicles Act include an extension of the definition of "chauffeur" to include a person temporarily engaged to drive a motor vehicle and also "the driver of a

motor vehicle, other than the owner of a truck, operated for gain." Sections were added to the Act dealing with financial responsibility of owners and drivers. The provisions of these sections which concern chauffeurs are similar to those inserted in the British Columbia Motor Vehicle Act in 1932. (LABOUR GAZETTE, June, 1932, page 659).

In the revision of the Companies Act the section relating to liability of company directors for wages of employees and for workmen's compensation assessments was unchanged. A new section provides for the preferential payment of such debts in cases where a receiver is appointed or possession is taken on behalf of debenture-holders. A company is forbidden to give financial assistance to any person for purchase of its shares but this provision does not prohibit the making of loans to employees for that purpose.

Sections dealing with automobile insurance were added to the Insurance Act including a provision that an insurer shall not be liable under an owner's or driver's policy for any liability imposed by any workmen's compensation law upon the insured, nor, unless the coverage is expressly extended, for loss or damage resulting from bodily injury to, or death of, any employee of the insured while employed in operation or repair of the automobile. A similar clause was added to the insurance laws of British Columbia, Manitoba, Nova Scotia and Ontario in 1932.

Reference has already been made in the LABOUR GAZETTE to the Bill to limit hours of work in the building trades, which was withdrawn (March, 1933, page 254 and April, 1933, page 371) and also to a resolution relating to unemployment insurance (April, 1933, page 422).

Proposals for legislation for the alleviation of unemployment were made by the special commissions appointed in the States of Massachusetts and Connecticut to study and report on this question. In Massachusetts a bill was proposed which would provide for the establishment of State-compelled unemployment reserves maintained by contributions by employers, the benefits under which would be limited to 10 weeks in any 12-month period. In Connecticut the commission favoured the establishment of a dismissal wage system which would provide for the compulsory payment of a dismissal wage by employers having five or more persons in their employ. The maximum payment to any one employee under the proposed plan would be fixed at \$120 for employment of 52 weeks and over.

## PARLIAMENTARY INQUIRY INTO PRODUCTION AND DISTRIBUTION OF MILK

THE House of Commons, on February 23, ordered "that the Select Standing Committee on Agriculture and Colonization be instructed to ascertain the facts connected with the production, collection, manufacture, distribution and marketing of milk and milk products, throughout the Dominion of Canada, with power to examine and inquire into all aspects of the said questions and report their findings to the House."

The committee carried out the investigation and presented their report to the House on May 12. The witnesses included representatives of the primary milk producers and the distributors, and officers of the Department of Agriculture. The report notes a marked increase in recent years in the direct consumption of milk and cream, as compared with manufactured milk products. "Between 1925 and 1930, the total milk production increased by about 18 per cent, but during the same period the quantity of milk required for domestic consumption increased by about 85 per cent. The relatively greater increase in the milk for domestic consumption as compared with milk production has necessitated a withdrawal of milk from other outlets in order to supply the increased demand for domestic consumption."

A table is given showing the percentages of the total milk production used for different purposes in 1925 and 1930. From this table it appears that the percentage of total milk production used for domestic consumption is 15½ per cent greater in the latter than in the former year, while with the exception of ice cream lesser percentages of the total milk production are devoted to the purposes of the manufacture of dairy products. The committee therefore commenced its inquiry by a study of the production and distribution of fluid milk and cream. It was found that the rapid increase in urban population, combined with the public demand for a pure and healthy supply had resulted, first, in an increased cost of production, and second, in a complicated and expensive system of collection, processing and distribution.

*Cost of Production.*—The committee found that the costs of production are not reflected as they should be in the returns to the primary producer, but the price paid the producer of fluid milk is arbitrarily fixed and controlled by the distributors, having regard to some extent to the prevailing prices of butter and cheese and the surplus supply; it being generally agreed by all witnesses that the farmer-

producer is not receiving an adequate return for his labour and investment.

"The comparatively recent advent of stores, and particularly chain stores, into the retail milk business was brought to the attention of the Committee. Price cutting, by featuring milk as a leader, has resulted in upsets in the industry, coupled with extremely low returns to the producer. The featuring of milk as a leader should be discontinued.

"Producers' Associations," the report states, "have been formed in many districts, for such purposes as collective bargaining, and controlling surplus. The unenforceable agreements between distributors and producers presently used, respecting prices and supply, should be replaced by contracts enforceable at law. Your committee recommends that tribunals should be set up vested with authority to settle differences between producers and distributors' organizations, and, if necessary, to fix the returns to the producers and the prices charged the consumer.

"The result of co-operative organization by the producers was evidenced by witnesses representing the Fraser Valley Milk Producers' Association, the northern section of the Alberta Pool and the Saskatoon Dairy Pool. These co-operative efforts have met with considerable success, with resultant substantial benefits to the producer members of their associations. Your Committee finds that the measure of success of co-operative efforts is dependent upon local conditions. It is worthy of note that the Saskatoon Dairy Pool succeeded in reducing the spread and at the same time gave to the producer 46 per cent of the consumer's dollar."

*Cost of Distribution.*—The report deals with the main factors in determining the cost of distribution, these being stated as follows: Pasteurization, and provincial and municipal health regulations; duplication of services; special services; labour costs; bottle losses; bad debts; depreciation of distributors' plant and equipment; fluctuating demand; dividend requirements.

Pasteurization was shown to add considerably to the cost "spread." Greater uniformity in sanitary and health regulations was found to be desirable. "The overlapping of delivery and collecting routes by numbers of distributors in the same area is a serious factor affecting the price to the consumer and the returns to the producer. The committee is of opinion that such overlapping, should as far as possible, be eliminated." Substantial

sums were found to be spent annually in bottle replacements, but the percentage of losses from this cause that were charged by the various companies showed a wide variation. In regard to bad debts the committee found that "the consumer who receives special service and is accorded credit should pay the cost and loss resulting therefrom; whereas the evidence shows such costs and losses are charged to the consumer at large."

The report deals in detail with the problem of "surplus milk" (being the amount delivered over and above the percentage of milk for which an "association price" is paid). It was found that "the present system of paying on a surplus basis for a certain percentage of milk consigned by the individual producer, a percentage determined exclusively by the distributor, is inequitable. Milk bought for other purposes than fluid distribution should be purchased under separate contract."

The committee found that "while the returns from most industries have during the past two or three years materially decreased, such cannot be said of those interested in the distribution and sale of whole milk. The salaries and returns to executive and operating officials and shareholders of the distributing companies have, in a large measure been maintained at the 1927, 1928 and 1929 level although business and industry general have, since 1929, declined very markedly, and milk prices to the producer have been reduced to an extremely low level."

In regard to cost of distribution the report discusses briefly the questions of capitalization, depreciation and bad debts. The committee were of the opinion that salaries paid to some of the higher officials of the various distributing companies are at this time, entirely too high and wholly unjustifiable. . . . "Those engaged in the sale and distribution of whole milk products," the report continues, "have during these very difficult times, in a substantial way at least, been able, unlike most other industries, to maintain their profits at the same level as in more prosperous times. . . . The evidence presented to the Committee clearly indicates that the sale and distribution of whole milk products is gradually getting into the hands of fewer and larger companies. Economies to the companies interested may have resulted, but there is no evidence of any benefits accruing from such mergers to either the producer or the consumer. In many cases there is evidence that mergers have removed competition and the general effect is undoubtedly to give the distributors a more definite control of the situation."

*Producer's Share.*—"The matter of a just share of the consumer's dollar as it relates to the distributor and the producer, is important to the conduct of the milk business. That

each should receive a just share as a remuneration for his efforts is recognized having due regard to the consumer's interest." The committee finally reached the conclusion that the producer's share has decreased very substantially in recent years, and that he is not receiving an equitable share of the money paid for milk by the consumer. "The milk distribution business is made possible by the industry and investment of the primary producer and it is the opinion of the Committee that the primary producer is entitled, at least to a much greater share in the ultimate proceeds of the sale of this product."

*Other Milk Products.*—"Milk not required for fluid consumption is manufactured into many different products of great commercial value. These represent in the aggregate nearly 60 per cent of the total. It is apparent, therefore, that your Committee has investigated only a very limited part of the subject referred to it. The prosperity of the milk industry is co-related with and dependent upon the successful production and sale of butter, cheese, evaporated and powdered milk, casein, skim-milk-powder, etc. Your committee is convinced that a thorough investigation into the production, manufacture and sale of these commodities should be undertaken.

"Your committee, in view of the foregoing findings, conclusions and recommendations further recommends:—

"That steps be taken to inquire into the manner in which our production of milk should be manufactured and marketed; to explore the different markets available at home and abroad; to investigate the possibility of new markets, and to study the methods of collection, handling and storage."

The British Mines Department has issued a pamphlet dealing with first-aid at mines. The provision of an efficient first-aid and ambulance service at every mine is required by law under the First Aid Regulations of 1930, and the object of the present pamphlet is to help mine managements and mine workers in organizing such a service. It is estimated that, at a mine employing a thousand men, there are on the average one fatal injury in the course of a year, about 150 injuries disabling workers for more than three days, and at least 1,000 minor injuries—such as cuts, strains, and scratches—which ought to receive first-aid treatment. The object of first-aid treatment is not only to alleviate the sufferings of those severely injured, but also to deal promptly with the much larger number of these minor injuries. Such injuries would not normally put men off work at all, or only for a day or two; but, if neglected, they may have serious consequences. Blood poisoning, the loss of a limb, or even death, may result from a trivial, but neglected injury.

## WORKMEN'S COMPENSATION IN ONTARIO AND MANITOBA IN 1932

### Ontario

THE eighteenth annual report of the Ontario Workmen's Compensation Board reviews the administration of the Act during the calendar year 1932. A further decrease was shown in the number of accidents reported during the year, the accidents reported in 1931 numbering 52,894, and in 1932, 41,470. The largest number of accidents reported in any month during the year was in February, when 4,023 accidents were reported. The allowed claims in 1931 were 48,882, and in 1932, 43,904. Out of the 38,469 claims allowed in Schedule 1, 18,173 were for medical aid only, as compared with 22,802 for the year 1931. The death claims allowed during the year numbered 283, as compared with 266 in 1931.

The number of employers reporting under Schedule 1 decreased from 23,138 in 1931 to 21,058 in 1932. Schedule 1 comprises industries under the collective liability system, the employer not being individually liable for accidents to his workmen, but being assessed to provide a general fund out of which accidents occurring in the several classes of industries throughout the province are taken care of. In Schedule 2 industries the employer is individually liable for accidents to his workmen. The greater number of accidents are under Schedule 1. The provisional pay rolls reported to the Board showed a substantial decrease from \$409,260,000 in 1931 to \$331,582,000 in 1932, indicating a largely decreased employment in industry during the year. These changes were probably most marked in the lumbering industry and the construction industries. In the latter the number of employers dropped from 7,738 in 1931 to 6,452 in 1932, and in the former from 1,153 to 912, and there was a corresponding reduction in pay roll, lumbering dropping from \$8,775,000 in 1931 to \$3,890,000 in 1932, and construction from \$41,613,000 to \$21,757,000.

*Benefits.*—The total amount of benefits awarded under the Act decreased from \$6,021,392.10 in 1931 to \$5,125,620.56 in 1932. Out of the benefits so awarded in 1932, compensation amounting to \$3,202,639.27 was in Schedule 1 industries, \$534,018.52 in Schedule 2 industries, and \$571,722.39 in Crown cases. The medical aid paid in Schedule 1 during the year showed a substantial decrease from \$1,060,763.01 in 1931 to \$817,240.38 in 1932. The total benefits awarded from the commencement of the Act to the end of 1932 amounted to \$97,050,238.41 and the total accidents reported during the same period were 970,041.

*Average Rates of Assessment.*—Based on the estimated wage expenditure, the average rate of assessment in all classes in Schedule 1 was reduced, being \$1.07 in 1932, as compared with \$1.22 in 1931, and an average of \$1.17 since the commencement of the Act.

*Administration.*—Administration expenses were reduced from \$350,491.05 in 1931 to \$325,328.21 in 1932. It is explained that all the administration expenses are now paid by employers under the Act, and during 1932 were allocated as follows:—Silicosis Fund, \$2,068.52; Mine Rescue Work, \$90.81; Dominion of Canada, \$14,129.63; Province of Ontario, \$26,337.85; Schedule 2 Employers, \$24,189.86; Schedule 1 Employers, \$257,729.19; and \$782.35 was returned to the Board on account of special audits. The total administration expenses for 1932, less expenses of supervising work in connection with silicosis and mine rescue stations (not properly administrative work) and handling claims for silicosis were 6.30 per cent of all benefits awarded. This compares with 5.07 per cent in 1931. It is pointed out that this is not a fair test because awarding benefits is only one branch of the Board's work, and the amount awarded is lessened by the fact that there is a reduction in wages paid, both in the rate of wages and the average earnings upon which the benefits are computed, the average wage being reduced by lack of employment as well as reduction of earnings.

*Funds.*—Dealing with the finances of its operations, the Board states that the Disaster Reserve Fund has not required further assessment during the year, showing a balance at the end of 1932 of \$257,875.59, as compared with \$257,303.05 at the beginning of the year. The interest on the fund more than paid the cost of cases charged against this fund in relief of classes affected by injuries to previously injured workmen. These charges are made in order to encourage employers to re-employ workmen previously injured in connection with industry whom they would otherwise hesitate to employ by reason of the danger of increased cost in the event of their being again injured.

The amount now standing to the credit of the Pension Reserve Funds in the different schedules is as follows: Schedule 1, \$19,706,508.89; Schedule 2, \$3,455,621.91. This represents the actuarial liability outstanding in connection with pensions which have been actually granted by the Board, and assures to all pensioners the ultimate payment of their claims in full.

The Accident Fund has been maintained at an amount sufficient to set aside the amounts required for the Pension Fund and to meet all payments by way of medical aid and temporary disability payments awarded by the Board or due to workmen, the expenses of administration and safety association payments, and also to provide sufficient funds to meet the estimated costs of all accidents which have happened and in respect of which permanent disability awards have not yet been made or in which temporary disability awards may be continuing. The Board shows on hand as a provisional balance at the end of 1932, \$1,607,908.14, as compared with \$1,690,273.77 at the end of 1931, which is deemed sufficient to cover all outstanding and unsettled claims and to provide a reasonable margin of safety. While the Board desires to maintain sufficient surplus in the Accident Fund for this purpose, it is not desired to carry any greater surplus than is necessary, and this has been somewhat lessened during the year by reason of reduction in rates or slightly increased accident costs where rates were not raised.

*Rehabilitation.*—Featuring the rehabilitation work of the year was the establishment of a physiotherapy department for the purpose of decreasing the time during which the workman was disabled and lessening the severity of the disability. The Board established this clinic in May, 1932, and since that time, 3,840 treatments were given, averaging about thirty per day.

The Board charged against the different classes a levy of \$1.50 per treatment against each case receiving treatment, which was less than the amount heretofore paid for such treatments, and employers in Schedule 2 were also charged on the same basis. The result was that the full operating costs of the clinic were paid for and all the cost of equipment with the exception of \$698.31. The charge per treatment for 1933 has been reduced to \$1, which it is considered will pay all operating costs and also settle the balance of the cost of equipment. "This will result," the report states, "in a considerable saving to the Board in the cost of physiotherapy treatment previously paid. In addition, it has enabled the Board to use it in a great many more cases and has resulted in lessening the period of disability of the patients treated, lessening the award for permanent partial disability by re-establishing the man's working ability in a great many cases where previously treatment

was closed with permanent partial disability present, and it has also furnished invaluable service in connection with doubtful cases and cases of suspected malingering hysteria, and lowered morale."

*Legislation.*—The report refers to the amendments made to the Act during the year—the addition of dental aid and the establishment of the new system of individual merit rating in accordance with plant conditions (LABOUR GAZETTE, May, 1932, page 530). Schedule 3 of the Act was further amended by adding the following industrial diseases in the processes set forth:—*Bursitis*.—Any process involving continuous rubbing, pressure, or vibration of the parts affected; *Cancer*.—Arising from the manufacture of pitch and tar; *Dermatitis (venenata)*.—Any process involving the use or direct contact with acids and alkalies or acids and oils capable of causing dermatitis (venenata); *Infected blisters*.—Any process involving continuous friction, rubbing or vibration causing blisters or abrasions.

Authority was given to the Board to establish a Superannuation Fund, subject to the approval of the Lieutenant-Governor in Council, but owing to financial conditions the Board has not proceeded further with this than to make inquiries as to the cost of such a fund.

*Safety Work.*—Reviewing the scope of its safety activities, the report states that this work is carried on by the different employers in the classes represented, through boards of directors, and the cost of their work is assessed by the Board against the employers in the classes represented. The amount spent in such work during the year 1932 was \$157,119.97, as compared with \$164,499.03 in 1931. This reduction in costs is in line with the general desire that there should be as great a saving in expenditure as is consistent with efficient work. The amounts paid to each of the associations were as follows:—Lumbermen's Safety Association, \$22,941.70; Ontario Pulp and Paper Makers' Safety Association, \$14,529.17; Class 5 Accident Prevention Associations, \$10,400; Industrial Accident Prevention Associations, \$100,711.60; and Electrical Employers' Association of Ontario, \$8,537.50. The work of the mine rescue stations has been carried on and the amount spent in connection with these stations for maintenance, salaries, supplies and supervision, was \$21,906.98.

The concluding chapter of the report contains completed statistics for the year 1931 and gives information that was not available when the report for that year was made.

## Manitoba

The annual report of the Workmen's Compensation Board of Manitoba for the calendar year 1932, gives the following account of the work of the Board.

"The Board operates, for service and not for profit, a casualty insurance company covering the various industries set out in Schedule 1 of the Workmen's Compensation Act. These industries file returns showing a gross payroll which averages \$70,000,000 per year. In depression years this payroll may fall to about \$55,000,000, in years of industrial activity it reaches nearly \$85,000,000. Workmen in these industries who receive injury by accident arising out of and in the course of their employment are paid compensation on a basis of  $\frac{2}{3}$  of their average earnings together with full hospital and medical treatment. When fatal accidents occur, funeral benefits are paid and widows and children receive pension allowances fixed by statute. These benefits are paid from an insurance fund raised by assessing the payroll already mentioned. The premium income averages one million dollars per year and is collected by the Board from more than 5,000 employers in amounts as small as a five dollar bill. The Board has also the task of fixing the rates to be paid by the various industries, so that each rate may bear, as far as possible, a fair relation to the accident hazard which it underwrites. This premium income is wholly paid by the employers and out of it is also met the cost of administration of the Act, including rent, salaries of the Board and staff and all other expenses."

The Board also acts as a court in deciding the various cases brought before it. Approximately 700 new cases come before the Board each month, and in 1932 the awards given in the various claims amounted to \$834,000 as compared with something over \$1,000,000 in 1931. It is explained that the accidents of each year and the subsequent costs arising therefrom are taken care of out of the premium income of that year. The money required to make subsequent payments is transferred to a pension reserve account, and invested in diversified trustee securities. The amount of money so invested now amounts to some \$3,000,000. Out of this fund pensions are paid to nearly 600 dependents of deceased workmen and permanently disabled workmen.

The Board now handles all industrial accidents happening in Manitoba to employees

of the Dominion Government. Special Federal legislation has been enacted to this end, the Dominion Government agreeing to keep the Board in funds as required and to pay their share of the administration costs. These costs are adjusted and paid annually.

Although the number of new claims has decreased, the Board points out that the number of difficult cases has increased. "Many requests were received during 1932 asking for the re-opening of claims long closed. Many others were from workmen who desired to commute small allowances into lump sums to tide them over periods of unemployment. In current cases during any period of depression there is sometimes a tendency to prolong the period of disability where the job has finished and the injured workman when adjudged fit will join the ranks of the unemployed. The question of compensation to be paid to men injured on relief work has also proved a problem difficult of solution."

The Board has also made an endeavour to rehabilitate and fit into other vocations certain workmen who by reason of permanent disability have been rendered incapable of following their former callings. It is stated that "some of the efforts along this line have been conspicuously successful, others have totally failed," and that "any success achieved has been in large measure due to the prior education of the casualty and to his powers of individual initiative."

During the year 1932 there was a further reduction in the number of accidents reported to the Board, the total being 6,909 as compared with 8,219 during 1931. Fatal accidents numbered 30—a reduction of 11 from the 1931 total. On December 31, 1932, the Board had on its books 570 dependants of workmen killed in industry during the period March 1, 1917, to December 31, 1932.

During 1932 the actual cash disbursed by the Board amounted to \$851,392.72 as compared with \$980,959.89 disbursed during 1931. The value of the Board Orders passed during 1932 for the payment of compensation, including orders respecting Dominion Government employees, and amounts transferred to General Unclassified Reserve to provide for future payments in fatal and permanent disability cases was \$834,225.03 as compared with \$1,020,534.80 for the year 1931.

The accidents in the various groups during the past two years are summarized as follows:—

Industrial Accidents in Manitoba, 1931-32

| Group                         | 1931  | 1932  |
|-------------------------------|-------|-------|
| Steam railways.....           | 1,114 | 947   |
| Province of Manitoba.....     | 340   | 247   |
| City of Winnipeg.....         | 369   | 277   |
| General body of employers.... | 5,858 | 4,882 |
| Winnipeg Electric Company.... | 126   | 163   |
| Dominion Government.....      | 467   | 393   |
|                               | 8,274 | 6,909 |

An analysis of the completed statistics for 1931 indicates that of the total number of

accidents (8,219) in that year, 81.2 per cent entailed the payment of compensation, either for medical aid only or for compensation for time loss and medical aid, while in 18.8 per cent of the cases no expense was entailed.

The total actual payroll of all classes for 1931 was \$59,993,269.25, of which amount \$34,958,227 was the payroll of the general body of employers, the largest class.

The Board, in addition to its duties in connection with Workmen's Compensation, also administers the old age pensions regulations for the province. It reports that over 12,000 pension claims have been decided in the past five years. The annual budget for pensions is now about two million dollars. Besides the payment of 8,000 pensioners, about 150 new claims are dealt with each month.

### Nova Scotia Accident Prevention Association

The annual meeting of the Nova Scotia Accident Prevention Association was held in Halifax on April 19. In his presidential address, Mr. G. S. Harvey referred to the contraction in industry due to economic conditions. As indicative of the situation, he stated that the payroll assessed under the Workmen's Compensation Act in 1932 was approximately \$33,000,000 as compared with \$61,000,000 in 1929.

The president pointed out that though business conditions might fluctuate, the problem of safety and accident prevention was always present. From a monetary point of view he emphasized to employers the importance of accident prevention. He declared that monetary loss through injuries is in a large measure a controllable item in the cost of production; that with reduced operations the proportionate cost of each accident has been multiplied; and that one injury to an employee can absorb the savings effected through many petty economies. He showed that as the employers are grouped into classes and sub-classes for insurance and assessment purposes, the savings by one firm through preventive measures is distributed over the whole group, and in the absence of similar action on the part of the others, the benefit to the one is negligible.

The Association, therefore, must endeavour to reach all and impress them with their joint responsibility in the problem of reducing accident costs.

The secretary, Mr. H. R. Thompson, stated in his report that during depressed business periods there were not so many legitimate accidents, but there was more likelihood of fictitious claims for compensation and otherwise undue advantage being taken of the Act. He pointed out that the money paid to the Compensation Board was only a small part of the cost of accidents, as there were also indirect costs involved, which, when carefully estimated, indicated that the compensation cost formed only about one-quarter of the total; and that this fact should make a strong appeal under present conditions when employers were looking for ways and means of saving money.

The same officers were re-elected for 1933 and are as follows: Messrs. G. S. Harvey, Oxford Paper Co., president; G. S. Misener, Acadia Sugar Refining Co., Dartmouth, 1st vice-president; and N. T. Avard, Maritime Coal, Railway & Power Co., Amherst, N.S., 2nd vice-president. Mr. H. R. Thompson, of the Canadian Manufacturers' Association, continues to act as secretary.

### Public Health in Canada in 1932

The *Statistical Bulletin*, published by the Metropolitan Life Insurance Company, in its issue for April, said: "In Canada, as in the United States, 1932 was a record health year. This is indicated by the very low death rate of nearly one and one-quarter millions of Can-

adians who are insured in the Industrial Department of the Metropolitan Life Insurance Company.

"The rate among these insured Canadians declined in 1932, to the very low point of 7.7 deaths per thousand insured lives. This is a

drop of 4.3 per cent from the previous minimum recorded in 1931. In the face of increasingly unfavourable business conditions, the public health has been maintained. The people of Canada are to be congratulated on their good fortune; for the reduction that has taken place represents the saving of many lives and the prevention of an even larger number of cases of illness. Such gains are especially gratifying in periods of economic disturbance. Remarkable changes have taken place in the mortality rates of important diseases among the Canadian wage-earning population.

"The gain in control over preventable disease and premature death in Canada in recent years is an extraordinary achievement, and at once places this country among the leaders in sanitary science and public health work in the whole world. It is especially gratifying to note in the current figures how great has been

the improvement in the Province of Quebec. The recent advances in public health organization in that Province, and more especially the establishment of the large number of county health units, have already borne fruit. Much of the improvement in the Canadian death rate in recent years has in fact been due to the progress made in Quebec. . . .

"The progress that has been made in Canadian health conditions has been due, in large measure, to the support which the health departments have received from their governments in recent years. It is very much hoped that the excellent organizations already established will continue to receive the same encouragement and support during this period of world-wide economic disturbance, when the maintenance of the public health is even more important than ever."

### MINIMUM WAGES FOR WOMEN IN ONTARIO IN 1932

THE twelfth annual report of the Minimum Wage Board of Ontario, in reviewing the administration of the Act during 1932, states that in this period the enforcement of the Act "has been decidedly more delicate and difficult than at any time in the eleven years since the Board was appointed." As a result of the discontent engendered by economic conditions the complaints received by the Board were more numerous and vigorous than in any previous year. The Board points out that often the complaints "emanated from those who did not understand that there is no law which can compel an employer to keep on an employee when he has no work for her to do, to pay her full-time wages for part-time work, or to pay the same high wages that he paid during profitable times"; that the Act gives no authority over these conditions; and that the Board is only empowered to take action when wages fall below the rates fixed by Board orders.

Dealing with opposition to the Act on the part of employers, the report states: "There are some employers who feel that our orders should not be enforced during a depression, but it must be obvious to thoughtful readers that if the whole idea of the Minimum Wage Law is not to be discarded it is at such a time that this law is most needed. A small minority has suggested that the Board should declare a moratorium until the depression is over. That, however, is impossible. Others have asked us to reduce our rates but it must be remembered that originally the rates were set very low and were not raised during periods of

temporary expansion. Now that we are passing through a period of depression, we do not feel justified in changing the present modest levels, at any rate until the cost of living for a self-supporting working woman, as reflected in our budget, is materially reduced. There are those who still cling to the idea that the profitableness or unprofitableness of business should be the yardstick by which minimum wage rates are fixed. Fortunately they are few in number. The vast majority of employers heartily approve of the principle underlying the Minimum Wage Law, namely, the right of a woman to live from the results of her labour whether industry is making money or not.

"Unfortunately some few employers are taking advantage of the present unemployment situation to exploit male labour. It is clearly the duty of the Minimum Wage Board to see that the working women of the province are not similarly sacrificed on the pseudo altar of economic necessity. It must be kept in mind that we are not administering a fair wage law but a minimum wage law; that we do not fix wages but simply set the cost of living levels below which wages may not fall. The Minimum Wage Law asks no more for working women than society demands for its criminals, imbeciles and paupers, viz.: sufficient food, proper shelter and modest clothing. When this is clearly understood, surely there can be no argument as to its desirability. We are satisfied that with few exceptions our regulations are being obeyed throughout the province and we are gratified to know that the Board has

been successful in maintaining its rates, thus protecting the working women of Ontario."

It is explained that the wage rates fixed by the Board orders are fitted to the cost of living. The cost of living budget is established

after careful investigation, and during the past year it was revised monthly. This budget represents the cost of living of an average working woman, in Toronto, which is taken as the basis. The budgets of workers in other

AVERAGE WEEKLY WAGES AND HOURS OF FEMALE EMPLOYEES IN VARIOUS INDUSTRIES  
IN ONTARIO, 1932

| Industry   | Number of Firms | Female Employees |          | Average Weekly Wages |          | Average hours per week | Minimum wage (experienced adults) |

\*In places between 10,000 and 30,000 population, minimum wage is \$11 per week; between 4,000 and 10,000, \$10; between 1,000 and 4,000, \$9; all below 1,000 and rural parts, \$8.

localities are then adjusted in proportion to a recognized variation in the cost of living as between large and small cities, towns, villages and country districts. The budget for Toronto allows \$364 per year, or \$7 per week for board and lodgings; \$115.05 for clothing; \$171 for sundries (including laundry, doctor, dentist, carfare, amusements, church, etc.), making a total of \$650 for the year. The weekly budget for Toronto is therefore as follows: board and lodging, \$7; clothing, \$2.21; sundries, \$3.29, making a total of \$12.50 per week. The figure thus arrived at is taken as the minimum wage required to provide a female worker at Toronto with the necessities of living.

Even with the decided reduction in the prices of foodstuffs, the Board's opinion is that while it is true that certain commodities have come down in price, "it is equally true that taxes, interest, insurance, coal and electricity have not been reduced, and rents only slightly; and these have a distinct bearing on this item of the budget." Therefore, the Board felt that there was not sufficient reduction in the cost of living to justify a decrease in rates. However, the Board promises to keep in mind constantly the possible revision downward of the cost of living and just as soon as it is convinced that any considerable reduction has taken place, it will promptly consider the advisability of a change in the existing minimum wage rates.

According to the statistics presented in the report, the number of employees under the Act was 53,461 in 1929; 50,069 in 1930; 47,086 in 1931; and 44,453 in 1932. During 1932 there were 44,453 employed in 2,174 establishments as compared with 47,086 in 2,211 factories in 1931, representing a decrease of 1.7 per cent in the number of establishments and of 5.6 in the number of employees. The average weekly

rate of wages paid in all classes throughout the province during the year 1932 was \$13.66.

Referring to the office workers' group, the report says: "It will be observed that not a single employee received less than a weekly rate of \$10 per week; that the average wages paid was \$19.33 per week; and that the average hours worked were only 39.5 per week. There was no law to prevent these employers reducing their average weekly wages 33½ per cent. They would still have been above our levels. That they did not do so is at once a credit to themselves and a source of satisfaction to us."

There were 447 complaints received during 1932, all of these being composed amicably except one which was settled in court.

During the year the Board collected arrears of wages due to a number of employees. Sixty-five firms paid 81 employees a total of \$2,323.98. The largest payment in any one case was \$139.59 and the average was \$28.69. These arrears were collected without one cent of cost to the employees concerned.

The Board has authority to allow a lower wage to aged or handicapped workers, and to suspend or vary its orders in cases of emergency. This authority is used sparingly, and during the year only 183 such permits were issued; 72 permits expired, leaving 320 permits in force. It is stated that the provision proved of considerable value under present economic conditions, and was the means of keeping in employment those who "would have been derelicts on the industrial world."

A new order—governing the employment of young girls in shoe shine parlours in Toronto—was issued during the year (LABOUR GAZETTE, December, 1932, page 1265).

In the accompanying table are summarized the chief statistics with respect to the various industries covered by the Act.

## MINIMUM WAGES FOR WOMEN IN QUEBEC

### Provisory Order Governing the Food Industry

THE Women's Minimum Wage Board of the Province of Quebec recently issued the following order governing the employment of female labour in the food industry. Previous orders were noted in the LABOUR GAZETTE, July, 1931, page 770, etc.

**Order No. 14 (Provisory).—Food industry, including the making of biscuits, pastry bread, macaroni, cereals of all kinds, chocolate, cocoa, confectionery and allied processes.**

(1) Minimum: No wage shall be less per week than is set forth in the following table:

*City and Island of Montreal, and a radius of ten miles around and beyond the island of Montreal:*

|   |         |
|---|---------|
| Beginners, not less than.....             | \$ 7 00 |
| After 6 months' experience at the trade.  | 8 50    |
| After 12 months' experience at the trade. | 10 00   |

*Province of Quebec, excepting the city and Island of Montreal and a radius of ten miles around and beyond the Island of Montreal:*

|   |        |
|---|--------|
| Beginners, not less than.....             | \$6 00 |
| After 6 months' experience at the trade.  | 7 50   |
| After 12 months' experience at the trade. | 9 00   |

(2) *Hours of Work:* The work period for which these minimum wages shall be paid, shall be 55 hours per week.

(a) Work in excess of the above work-period shall be counted as overtime and shall be paid for at not less than the minimum wages fixed by this Order.

(b) Work for less than the above work-period may be counted as short-time and be paid for pro rata of the minimum wages fixed by this Order.

(c) The total of working hours cannot in any case exceed 55 hours per week unless a special permit has been obtained from the Public Buildings and Industrial Establishments Inspection Department.

(3) *Maximum of Apprentices:* The number of employees of less than twelve months experience and earning less than \$10 per week for the City and Island of Montreal, and \$9 per week for the Province of Quebec, excepting the City and Island of Montreal and a radius of ten miles around and beyond the Island of Montreal, shall not exceed one half of the total female working force.

(4) *Piece Work.*—During the first six months experience at the trade, the wage of an apprentice working on piece work shall not be less than \$7 per week in the City and Island of Montreal and a radius of ten miles around and beyond the Island of Montreal, and not less than \$6 per week in the balance of the Province of Quebec, or the pro rata wage according to hours worked. In the case of piece work-

ers of more than six months experience, it is sufficient if at least 80 per cent receive wages conformable to this Order. If the 80 per cent is not attained, the basic piece work rate shall be considered as too low and shall be increased accordingly.

(5) *Deduction for Absence:* No deduction below the minimum wage line for absence shall exceed the value of the time lost.

(6) *Waiting Time:* Any employee required to wait on the premises shall be paid for the time thus spent. Piece workers shall be paid at a rate not less than that fixed for the class to which they belong.

(7) *Permits:* The Board may issue permits for lower wages than those fixed by this Order on behalf of aged or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers and employees are invited to consult the Board regarding any problems or misunderstanding which this Order may concern.

(8) *Penalties:* Any violation of this Order is punishable by fine. (See Section 12 of the Act.)

(9) *Posting:* Each establishment shall keep a copy of this Order posted in a conspicuous place in the shop.

(10) This Order shall be in force and effective for a period of twelve months, starting the 15th of May, 1933.

### Minimum Wages for Women in Saskatchewan

The following order of the Minimum Wage Board of Saskatchewan was approved on May 17. A temporary reduction of 10 per cent in the minimum rates of wages of the same classes was ordered last year (LABOUR GAZETTE, May, 1932, page 541; November, 1932, page 1177).

#### ORDER No. 6

For a period of four months from the first day of May, 1933, the minimum rates of wages fixed by the Board for workers in shops and stores, laundries and factories, mail order houses, hotels, restaurants and refreshment rooms, beauty parlours, and barber shops, are hereby reduced by ten (10) per cent where the rate so fixed is less than thirteen (13) dollars per week and by fifteen (15) per cent when the rate so fixed is thirteen (13) dollars per week or over.

The foregoing reductions shall not apply to the wages of an employee in any week during which she is subject to part time employment.

This order shall be deemed to have been in force on and from the first day of May, 1933.

Pursuant to the provisions of the Women's Minimum Wage Act of British Columbia, the Board held meetings at Vancouver at various dates in May and June for the purpose of hearing any person interested in the reconsideration of the orders relating to wages, hours of labour, and conditions of employment in the following occupations and industries: mercantile, manufacturing, office, telephone

and telegraph, fruit and vegetable, public housekeeping, laundry and cleaning, personal service.

### C.M.A. and Minimum Wage Orders in British Columbia

A year ago the British Columbia Division of the Canadian Manufacturers' Association asked the Minimum Wage Board of the Province to revise the order governing factories. About that time the Board reduced by 10 per cent, for a period of five months, the minimum rate for female employees in the fruit and vegetable industry (LABOUR GAZETTE, July, 1932, page 768), but no action was then taken in regard to the factory order. The B.C. Division then asked the Provincial Government to amend the Act by changing the constitution of the Board, so that it would consist of the following five members: the Deputy Minister of Labour as chairman; the secretary of the B.C. Division, Canadian Manufacturers' Association; the Secretary of the Trades and Labour Council; a woman member; and a representative of the fruit and vegetable industry. No action was taken at the recent session of the Legislature to give effect to this proposal, but the Division was informed that the Board would hold public hearings in regard to the operation of the order governing factories.

## RECENT ACTIVITIES OF ORGANIZED LABOUR

### Labour Educational Association of Ontario

With approximately sixty delegates in attendance from various industrial sections of the Province, the thirty-first annual convention of the Labour Educational Association of Ontario was held in the Labour Temple, London, Ontario, May 24. President Larry O'Connell occupied the chair. The delegates were welcomed on behalf of organized labour by Mr. E. Walker, president of the London Trades and Labour Council, while the civic welcome was extended by Alderman J. W. Jones, Acting Mayor of the city.

The convention paid tribute to the memory of the late Joseph T. Marks, founder and former secretary-treasurer of the Association. (The death of Mr. Marks was noted in the *LABOUR GAZETTE*, December, 1932, page 1250.) After the reading of a portion of the executive's report which referred to his sterling qualities and valuable services rendered the Association during his many years of membership the delegates stood in silence for a period, out of respect to his memory. At the conclusion of the convention a number of officers and members visited the cemetery and President O'Connell placed a wreath on the grave in the name of the Association. It was also decided that similar commemorative action would be taken by the London Trades and Labour Council on the future anniversaries of Mr. Marks's death.

In addition to reviewing the activities of the Association during the past year, the report of the executive contained seventeen resolutions which were afterwards dealt with by the convention. The report of the secretary-treasurer showed the finances of the association to be in a satisfactory condition.

Mr. Drummond Wren, secretary-treasurer of the Workers' Educational Association, which is an organization interested in educational matters, briefly addressed the convention, stating that fifteen branches of the organization had been established to date, with thirty-three classes and an enrolment of 1,500 students, eighty per cent of whom were members of organizations affiliated with the Trades and Labour Congress of Canada.

Resolutions were adopted recommending as follows:—

Repeal of section 98 of the Criminal Code;

Abolition of cadet training in schools and substitution therefor of a system of physical training;

Enactment of contributory unemployment insurance legislation;

More adequate scale of relief throughout the province and that women be given representation on boards administering such relief;

Reduction of the age limit of the Old Age Pension Act from 70 to 65 years and abolition of the provincial residence qualification;

That adequate tolls be established on the canals of the Dominion;

Equalization of income tax levies by municipalities throughout Ontario, the collection of same to be made mandatory;

Opposing any reduction in hospital grants to municipalities by the provincial government;

Extension of financial assistance by the Federal Government to the provinces in accordance with the Vocational Education Act;

Opposing reductions of the established wage scales of the Minimum Wage Board for female labour coming within the scope of the Act;

Sale of beer and wine in licensed places for beverage purposes;

The six-hour day and thirty-hour week;

Condemning the employment of student labour in industry by public authorities during vacation periods, except in cases where circumstances compel the student to maintain himself;

Continuance of the Mother's Allowance Commission;

Protesting against partisan interference with the Ontario Hydro Electric by politicians of any party or group;

Amendment to the Copyright Act to provide that any printed article requiring Canadian copyright must be printed from type set within the borders of Canada or from plates made from type set within the Dominion.

A resolution calling for the establishment of a board to which appeals from decisions of the Workmen's Compensation Board could be taken was rejected by the delegates.

The chief officers elected were: President, Larry O'Connell, Toronto; Vice-president, Humphrey Mitchell, M.P., Hamilton; Secretary-treasurer, Alderman Rod Plant, Ottawa.

Mr. Tom Moore, President of the Trades and Labour Congress of Canada, who attended the convention as a delegate from his local union, made a strong plea for the unity of labour, especially during the present economic situation.

Kitchener was chosen as the convention city for 1934.

## The Mine Workers' Union of Canada

A special convention of the Mine Workers' Union of Canada was held at Lethbridge, Alberta, on May 5-7, with 38 officers and delegates of the organization present, as well as 15 delegates from other bodies and three fraternal delegates. In the convention call, the following subjects were announced as the most important on the agenda: The removal of headquarters from Calgary to a mining field; a change in the form of election of officers, and the formulation of plans to combat wage-cutting by operators if such is launched. A recommendation of the credential committee that only delegates of the Mine Workers' Union of Canada were entitled to vote was adopted.

Mr. J. Stokaluk, Secretary-treasurer, gave a verbal report of the organization work of the union, in which reference was made to such subject matters as moving head office from Calgary to some mining field; the work of women's auxiliaries, youth sections and childrens' clubs; a plan for dealing with correspondence by local unions; observance of decisions of executive; reasons for loss of locals and membership, and perspectives for the future. The delegates were also informed that correspondence was being maintained between the executives of the Mine Workers' Union of Canada and the Amalgamated Mine Workers of Nova Scotia with the view of formulating plans for the establishment of a National Union of all miners, both coal and metal, throughout the Dominion.

President Sloan explained that owing to the demands on the time of the union officials the convention which was scheduled to take place in March had to be postponed to May. He reviewed conditions prevailing in the various coal fields in which the organization was interested, and stressed the need for the adoption of a common policy regarding the securing of a uniform scale of relief for miners in all camps. A further report on conditions at the various mines was presented by delegates from these localities.

Owing to the difference of opinion as to organizational changes, the convention adopted a recommendation of the executive board that these matters be referred to the next annual convention.

Mr. A. E. Smith, national secretary of the Canadian Labour Defense League stressed the necessity for building a united defense front against fascism. His request that the convention elect three delegates to attend the national convention of the Canadian Labour Defense League was complied with.

The following recommendations of the "Wage-Cut" Committee were adopted by the convention: (1) That a united front committee be set up in the Drumheller District to carry on the strike and prepare strike action at other mines to defeat the wage-cut; (2) The setting up of a Workers' International Relief committee at Drumheller in support of the strike; (3) That strong strike committees be organized at each mine on strike, and that these committees co-operate in a centralized manner; (4) Sub-district conferences, composed of elected delegates from all mining camps irrespective of union affiliation, to be called as soon as possible after special convention, at which united front committees to be established which would have power to make plans and call a sub-district strike; (5) That sub-district conferences organize solidarity committees in every camp connected with the Drumheller strike and co-operate with the Workers' International Relief for the support of same.

The convention also adopted a further recommendation of the Committee, that the delegates record their opposition to the application of the Duff Report on the railroads, and assured the active support of the organization to railroad employees who might lose their employment as a result of the carrying out of the provisions of the report.

In addition to favouring the formation of united front committees in each locality or sub-district, the committee on relief recommended as follows: (1) Fifty per cent increase in direct relief; (2) free rent, light, water and coal; (3) all work to be paid for at prevailing trade union rates; (4) no script, all relief to be paid in cash; (5) no budget system; (6) lower prices on food in the camps; (7) "slave camps" to be abolished; (8) non-contributory unemployment insurance; (9) increased relief allowance in camps where cost of living is high; (10) clothing allowance of \$5.00 per month for each adult and \$2.00 per month for each child under sixteen years of age; (11) all unemployed youths to get cash relief and be permitted to reside with their parents.

These recommendations of the committee were adopted by the convention.

Among the resolutions adopted were the following:—

Asking the provincial government to permit greater freedom in the jails and that newspapers and such books as circulate in public libraries be allowed, as well as permitting prisoners to receive tobacco from friends or to be allotted a ration.

Advocating the appointment of a commission, on which would be a number of practical metal miners, to investigate conditions prevailing in the Anyox mines.

Demanding immediate extinction of labour camps for single men, and that employment be provided these workers in their home towns, at trade union rates of wages, failing which, adequate cash relief to be granted them until such time as non-contributory unemployment insurance becomes available.

Protesting against the use of Section 98 and demanding that it be expunged from the Criminal Code, and further that prisoners convicted under this section be released.

Protesting against anti-Soviet war and the sending of scrap iron to Japan.

Demanding the unconditional release of Tom Mooney and the Scottsboro boys.

Protesting against the deportation of hunger marchers now held in Fort Saskatchewan jail.

The Women's Auxiliary Conference and the Youth Section Conference of the M.W.U. of C., was held at the same time as the special convention of the miners.

### Amalgamated Mine Workers of Nova Scotia

The second annual convention of the Amalgamated Mine Workers of Nova Scotia, held at Glace Bay, N.S., on May 8-13, 1933, was attended by approximately 60 delegates, representing 19 local unions, while fraternal delegations were present from the following organizations: Workers' Unity League, One Big Union; Canadian Labour Defence League; United Steelworkers; Unemployed Association; Unemployed of Dominion Mine, Cape Breton; U.N.I.A., and Women's Auxiliary.

The joint report of the president and vice-president reviewed the activities of the organization since its inception and gave an outline of the steps taken to conform with the instructions received from the first convention to organize the miners of Nova Scotia 100 per cent in the Amalgamated Mine Workers. In referring to the matter of finances, the officers informed the delegates that the future of the organization depended largely on the active support of the miners.

In the report of the secretary-treasurer reference was made to unemployment relief for the miners, and to the steps taken by the officers to have this relief increased by the towns and municipalities in the jurisdiction. The system of collecting dues over the table, instead of the "check-off" (the company deducting the dues from the miner's wages), was stated to be more satisfactory than was at first expected. The secretary-treasurer urged the members to put greater effort into their organization work in order that they might achieve the goal of "100 per cent A.M.W."

The fraternal delegates from the United Steelworkers of Sydney expressed the opinion that the miners and steelworkers should be united in one union.

The secretary-treasurer was authorized to wire Premier G. S. Harrington of Nova Scotia and all members of the Legislature from the various coal mining constituencies regarding the taking of a referendum vote to decide

what organization shall have jurisdiction over the district. Replies were received and read later in the session.

Resolutions were adopted as follows:—

Demanding the release of all "class war prisoners";

Asking the Federal Government to take steps immediately to offset the dumping of English coal on the St. Lawrence market at a price that places the Nova Scotia coal at a disadvantage, and that the difference in selling price be made up by the government so as to place the latter coal on a fair competitive basis;

Demanding for committees the right to collect dues on behalf of the organization;

Increase the amount granted for unemployment relief;

Requesting a conference with the Dominion Steel and Coal Corporation and the government for the purposes of discussing the question of recognition of mine committees of the organization in all collieries where the A.M.W. is established and failing in this that a strike vote be taken of the entire District of Nova Scotia;

Re-affirming a former decision for non-recognition of the existing wage contract drawn up by the United Mine Workers of America and refusing to sign any contract which contains a reduction in wages;

Recommending that work of a hazardous nature be given special consideration;

That residents in District No. 4 be not discriminated against in the matter of relief;

That horses be used for hauling in Mine No. 24, instead of this work being done by the miners;

Authorizing the sending of a delegation to ask the government for changes in the Workmen's Compensation Act;

Appointment of competent boiler inspectors, holding at least second class certificates as stationary engineers;

Asking the government to conduct an inquiry into the curtailment of work, and working conditions at the Glace Bay machine shops;

Increase of one cent per ton for machine runners in No. 12 colliery and that the walls of this colliery be reduced from 500 to 250 feet in length;

Instructing local contract men in the district to be governed by the policy of the A.M.W. and in the event of wage reduction being put into effect, that they stop operating the mines of Nova Scotia;

Recommending that the May Day celebration be left to the discretion of the individual local unions;

That in future the secretary-treasurer submit an itemized financial report;

That the annual convention of the A.M.W. of N.S. be convened on the second Monday in June of each year.

A motion to affiliate with the Mine Workers' Union of Canada and the Workers' Unity League was tabled indefinitely.

The election of district officers will be held on August 4, 1933.

### **Cigar Makers International Union Eliminates the Insurance Benefits**

In December last the executive of the Cigar Makers' International Union was informed by the insurance company by which the death benefit feature of the organization was carried, that the premium rate must be raised from \$1 per month per member to \$1.50. The large increase in the premium rate was due to the fact that over 5,000 insured members were over 65 years old. In April the executive referred to a referendum vote of the membership a proposition which carried with it the following eight changes in the constitution:—

The division of funds on an equal basis as between the International and local unions.

A more liberal reinstatement plan.

A reduction in monthly dues from \$2 to \$1.

Provision for one class of membership, with equal dues and equal rights for every member.

The elimination of retired beneficiary members.

Provision for equal strike benefits for all members.

A more liberal out of work privilege.

The entire elimination of the insurance and death benefit feature.

By a substantial majority the proposition carried, thereby suspending for the present further death benefit payments.

As a further economy measure the membership is being asked to postpone the annual convention.

### **Employees' Mutual Benefit Associations**

The various types of employees' mutual benefit associations, as they exist to-day in the United States and Canada, are described in a recent pamphlet issued by the Policyholders' Service Bureau of the Metropolitan Life Insurance Company. The term "mutual associations," as here used, includes not only

associations organized by the workers for their mutual benefit, but also those promoted by employers on behalf of their workers. Some years ago such associations were generally formed by the workers alone, but "with the growth of large corporations, the tendency has been for associations to be organized at the initiative of employers. Care, however, usually is taken to obtain the co-operation of employees."

The pamphlet describes forms of organization and methods of administration of some successful associations. Income is derived chiefly from members' dues and from company contributions. Most associations pay benefits to their members for at least part of the time lost because of sickness or non-occupational accidents and to beneficiaries of their members in case of death. Various other benefit provisions are made; in recent years, some associations have added retirement and medical benefits, while others distribute benefits upon the disability or death of members' dependants. Medical benefits offered to members and often to their families also, include physical examinations, medical treatment, hospital or operations benefits, and special services. Moreover, "since the membership of practically every benefit association includes a large proportion of the employees of every section of the company, the association is in an admirable position to develop and administer a wide variety of other activities of benefit to employees. It may determine the policies of organized recreation and education, and may select what may or may not be done for its members' pleasure and profit; and, at the same time, it may serve as a point of contact between management and men. Some of the typical activities of this nature are recreation, education, savings, and employee representation."

## CANADIAN MANUFACTURERS' ASSOCIATION

### Proceedings at Sixty-Second Annual Convention, Toronto, June, 1933

THE 62nd annual convention of the Canadian Manufacturers' Association was held at Toronto on June 6-7, with a large attendance of delegates, representing industries in all the provinces of Canada. President W. C. Coulter opened the convention with the following address:—

#### The President's Annual Review

The attention of nations is concentrated on the Monetary and Economic Conference which opens a few days hence in London and the hopes of their peoples are stimulated and encouraged by the prospect of its success. Upon that Conference depends, to a considerable degree, the happiness and prosperity of mankind and the preservation of the present form of civilization.

The following are some of the principal questions that will be considered by the Conference; monetary and credit policy; exchange; price levels; movement of capital; tariffs; prohibitions, restrictions and quotas relating to trade exchanges; and producers' agreements.

It is obvious that complete or partial solution of these questions is essential to the recovery of international and domestic finance and trade. Until, for example, there is devised a stable medium of international exchange, no settlement of financial or commercial questions can hope to bring lasting results. To no country is the problem clearer or its solution more vital than to Canada, suspended as she is, so to speak, between the dollar and the pound, and unable of herself to do much to bring order out of the existing uncertainty.

The Conference has been preceded and anticipated by two historic events, the Imperial Economic Conference and the recent international conversations at Washington. There is evidence that the Imperial Economic Conference has accomplished one of its purposes. It demonstrated to other nations that countries representing a fourth of the world's population and a fifth of the earth's surface could deliberate and agree on broad policies which reconciled divergent interests and promoted common welfare. Had the Imperial Economic Conference failed, there would not have been much hope for a world conference, but the success of the Imperial Conference turned men's minds more confidently towards the larger enterprise. With the magnificent object lesson provided by the British Empire

before them, the nations approach the world assembly with the determination to arrive at international agreements.

The second preceding event was the recent preliminary discussion between representatives of the United States and Great Britain, and, later, between representatives of the United States and other countries. Instances of friendship and co-operation between Great Britain and the United States are always welcome and nearly always beneficial, not only to themselves but also to others, but, in this critical time the apparent agreement in thought and action of these two mighty powers, sent a wave of thankfulness and hope throughout the world.

This is neither the time nor the place to analyze the causes which created present conditions. That has been done over and over again during the past few years. The information in regard to the past, the sufferings of the present, and the proposals for the future will be in the hands of the Conference, and the decisions reached will be in the power of the various governments to translate into action.

While the world looks forward with confidence and courage to the Conference, believing that much will be accomplished, it is well to remember that the intellects and powers of men are very limited, especially when they are in the grip of upheavals of nature or international conditions. At best, the Conference can only start the world on the road back to better conditions. It is not going to deal in magic or perform miracles. There will be no easy and spectacular transformation by the mere adoption of attractive formulae. After the Conference points out the way and starts the march, there will be a stiff journey, but we can make it cheerfully if we know that it leads upward out of the bog to solid ground.

*Domestic Problems.*—If bad times, unemployment, low prices and similar misfortunes were purely domestic conditions, the result of national mismanagement and confined within the boundary of Canada, we would have reason to reproach our governments and ourselves. While mistakes in past policy and practice have contributed to or aggravated our troubles, the factors which have chiefly harassed us are universal; every country is afflicted; most countries are in worse states than ours. International maladies must have

international remedies. Looking back over the four years since the storm broke, it is doubtful whether many will believe that Canadians could have done much more than has been done to deal with the various crises which confronted them. They have managed in some way to feed, clothe, house and find partial employment for those who were in distress. The Dominion Government, the nine provincial governments and the hundreds of county, township, city, town and village councils have been called upon to perform almost superhuman tasks. The members of these governments have carried great responsibilities and undergone severe and prolonged mental and physical hardships in discharging their public duties, while, at the same time, nearly all of them had to earn livings for their families and themselves in their private capacities.

They have made mistakes and probably spent some money unwisely, but the central fact is that they have performed their functions of governing a democratic country in a period of unprecedented stress and hardship, maintained the country's credit and preserved law and order.

Our governments are struggling with the legacies of the optimism of previous generations. About the beginning of the present century, the people of Canada were convinced that the material history of the United States was to be duplicated in this country and that preparations should be made for a population of twenty or thirty millions. Consequently, the Dominion, the provinces and the municipalities instituted and continued plans to provide government buildings, civil services, commissions and boards, educational institutions, railways and, later, competing highways, canals and land settlements, and, afterwards added several expensive forms of social legislation in order to meet the needs of the anticipated population. Such policies were, for the greater part, reasonable and proper for a rapidly growing country and, had it not been for the war, which checked immigration, and changed the attitude of other peoples in regard to emigration, plans for expansion might have been justified but, as it is, they were to some extent in advance of the actual needs of the country.

Unfortunately, governments have to continue collecting taxes to pay for these things. On top of this load were suddenly and heavily piled increasing annual expenditures for unemployment and relief. That practically all governments have been and are reducing ordinary expenditures is evident from their

budgets, but these savings have been counter-balanced, more or less, by the cost of relieving distress. Taxpayers are justified in insisting on economy in governmental administration, but they should go further. They should recognize the facts of the situation and appreciate the difficulties with which leaders of governments are struggling; and, moreover, they should co-operate with the various governments by making specific and practical recommendations as to how governmental expenditures can be curtailed and also by refraining from asking for expenditures except on projects which can be justified economically until the anticipated improvement of conditions and consequent rise of prices, enable taxpayers, without undue hardship, to pay current expenses and to make provisions for debt reductions.

Women and men everywhere in Canada have shown generosity, courage and resource in weathering the storm. They have done their work, looked after their own families, carried their own loads and at the same time have co-operated with governments, churches, lodges and associations and have acted as private individuals, to help the less fortunate. While credit is due and is gladly given to members of governments, and also to those directing social and charitable enterprises, they will readily admit that the functions and capacities of governments and of organized charity, are limited and that, for the greater part, Canadians must solve their own problems and bear their own burdens.

Take the problems of employment. Governments, commissions, churches and charitable organizations, and volunteer co-operative efforts can provide work only for comparatively few. The great part of employment must come from productive enterprises. Farms, fisheries, forests, mines, transportation, factories, professions and business furnish nearly all the opportunities for employment.

The following statistics show how some of the great producing departments have been keeping Canadians at work during the past four years:—

|                     | 1929    | 1930    | 1931    | 1932    |
|---------------------|---------|---------|---------|---------|
| Manufacturing. .... | 694,434 | 644,439 | 557,426 | 496,110 |
| Mining. ....        | 77,101  | 71,764  | 58,708  | 52,251  |
| Fishing. ....       | 64,083  | 63,830  | 61,832  | 55,030  |
| Lumbering. ....     | 97,000  | 90,000  | 52,000  | 46,280  |

The figures for 1929, 1930, and 1931 are official; those for 1932 are estimated from the official monthly index figures of employment.

According to these statistics, Canadian manufacturers in 1930 employed 92 per cent of those employed in 1929; in 1931, they employed 80 per cent of those employed in 1929;

and in 1932 they employed 70 per cent of those employed in 1929, the peak year of production. These are relatively high percentages, when it is remembered that certain large departments of industry, such as building and construction, have been brought almost to a standstill. These percentages, of course, include those partially employed and those maintained on repair work, building and similar temporary occupations, as well as those fully employed on the usual industrial processes. It is disquieting to think of what might have been the situation if the manufacturers and other producers had not been able to provide so much employment. Undoubtedly a great many Canadians would have been in desperate straits because farmers, retail merchants and other property owners could not possibly have paid the taxes necessary to support large additional numbers in idleness. Finding employment is only part of the problem. Manufacturers must first find customers for the goods which the employees make. There is no use employing people in making goods for which there is no sale, and there is no law compelling people to buy goods.

The majority of those out of work, or on part time, have been in a difficult position. They do not like relief; they prefer independence; they desire work at salaries and wages which will enable them to pay their way and have a surplus for investment in insurance, property and savings. With few exceptions, they have borne their troubles with extraordinary courage and patience. This general attitude is due largely to the fact that Canadians are intelligent and educated. They follow the trend of opinion and events in public addresses, the press and the radio and realize that conditions in Canada have been and are better than those in most other countries, and also that governments, institutions, associations and their fellow citizens are sympathetic and helpful.

The farmers of Canada deserve the highest praise for the manner in which they have battled with their difficulties. The unprecedented fall in commodity prices all over the world bore with peculiar severity on the agricultural population, who saw the values of their products melt away and, consequently, their buying power diminished. As manufacturers, we sympathize with them, particularly because their problems, being connected with production, are very similar to our own. We have all learned by painful experience how great is the interdependence of agriculture and industry and that they suffer or prosper together. When the farmers have little money from the sale of their products they buy

smaller quantities of manufactured goods; when the manufacturers are forced to reduce staffs the market for farm produce is restricted. On the other hand, as prices of farm products rise, the sales of manufacturers grow, and, as more people obtain work in factories at fair wages, the consumption of farm products increases.

In times of economic depression men's minds turn to intellectual pursuits; they read, study and think more than in good times when there are more diversions. This tendency is reflected in research work. In the restricted sense, research is academic; in the broad sense, research has a practical bearing on industry and other activities, and involves management in many phases. As Canadians we have no option in regard to education and research. Ten million people can maintain and develop half a continent only with the assistance of education, research in the wide sense, and machinery. Expenditures in education and research are not only a necessity to meet the trade competition of older, more populous and richer countries, but also an investment which will yield many rich returns in addition to those expressed in financial terms.

As the standing committees will present detailed reports on tariffs, transportation, taxation, and employment, and as the division committees will deal with conditions in the various areas of Canada, it is not necessary to refer at any length to these subjects in this review.

Apart from the fields of governments and conferences, with their financial and economic proposals, there are indications of improvement. The reports from the British Isles have been showing a small but steady improvement during the past year. Australia, which entered the depression among the first, is beginning to emerge with many of her troubles behind her. The United States, after prolonged and severe misfortunes, has adopted a bold course, has embarked on daring experiments, and the stimulus of action seems to have shaken off lethargy and imparted new life to many departments of activity, and, as Canadian business is always affected by conditions in the United States, we should benefit accordingly.

The rise in the value of farm products and in some basic commodities has created a better outlook in Canada, and also has increased capacity to purchase, with the result that there has been some improvement in business and employment, how much it is difficult to estimate at present.

In the case of Canada, we have one important advantage great and varied assets. The farms, mines, fisheries, forests, distributing, transportation, financial and industrial sys-

tems are all intact. The physical properties have not diminished in size, although their earning powers have been greatly reduced. When world conditions improve all these national industries can function at or near capacity, according to the demand for their products or services.

We have realized that trade is an interchange of services chiefly in the concrete form of products, which are largely crystallized labour; we should also remember that our national industries are assets, valuable to the extent to which they supply articles and services demanded.

While we await the conclusion of the world conference, realizing that it will deal with matters over which our, or any other single country, can have little control, we can continue to apply ourselves to our own particular national problems, in so far as they are capable of immediate solution, and, with our country's history in our minds, and the confidence engendered by the quality and character of our population, prepare to move forward with other countries to happier and better times.

### Report of Industrial Relations Committee

The report of the Industrial Relations Committee, which was adopted by the Convention, dealt with the recent activities of the International Labour Organization, with particular reference to the special Preparatory Conference on Reduction of Hours of Work as a means of helping to relieve unemployment (LABOUR GAZETTE, February, 1933, page 192), and to the views expressed on that occasion by the representative of the Association. The remaining paragraphs of the report were as follows:—

**Workmen's Compensation.**—The only provinces in which any important workmen's compensation changes took place in the past year were Ontario and Quebec.

In Ontario your Committee gave considerable attention, in collaboration with the Ontario Mining Association, to the question of silicosis and pneumoconiosis which, included in the list of "industrial diseases" under the Act in 1926, have proved so costly to compensate that some measure of relief to employers was imperative. After considerable negotiation with the Government, it was finally decided that the following changes, which the Ontario Mining Association had persuaded the Government were necessary in respect of the mining industry, should also apply to the stone and marble cutting industries and shops where metal is ground or polished:—

(a) Silicosis uncomplicated with tuberculosis to be compensated for like any other industrial disease, i.e., compensation for degree of disability actually proved.

(b) Silicosis complicated with tuberculosis to be compensated for on the basis of 50 per cent of average earnings instead of 66⅔ per cent.

(c) Claim for compensation for silicosis to be made and established within two years of leaving employment in which the disease was alleged to have been contracted.

Your Committee also secured an amendment to the Act restoring the merit rating system, which was cancelled at the 1932 session of the Legislature.

In Quebec where there was a deficit of \$900,000 on operation of the Workmen's Compensation Commission, the Quebec Division of the Association, after considerable negotiations, secured the following, among other, important amendments:—

1. A reduction of the weekly minimum from \$12.50 to \$10.

2. A change in the waiting period whereby a workman must be disabled for at least three weeks before he is entitled to pay for the first 7 days.

3. The choice of doctor instead of being left to the workman is given to the Commission.

4. Silicosis and pneumoconiosis and several allied diseases were deleted from the list of industrial diseases under the Act.

**Limitation of Hours of Work Legislation, Quebec.**—A Government bill was introduced at the last session of the Quebec Legislature giving the Governor in Council authority to limit the hours of any industry, or part of an industry, at any time, for any length of time. As a result of strong representations made by the Quebec Division of the Association, the bill was amended so that it should not apply to any industry in the province which was subject to competition from other provinces or foreign countries. As practically all industry in the province is in this position, the result of the amendment is to limit the application of the Act to public works, road building and similar classes of employment.

**Unemployment Insurance.**—Announcement having been made that unemployment insurance was to be one of the subjects on the agenda of the Dominion-Provincial Conference, called for January last, your Committee prepared a brief of the Association's views to be submitted to the Dominion and the various provincial Governments in advance of the Conference. In addition to setting out the objections in principle which the Association has heretofore taken, the brief emphasized that there were at the present time two cogent reasons against introducing unemployment insurance in Canada, viz:—

1. That the cost would be absolutely prohibitive.

2. That no unemployment insurance scheme introduced now would begin to meet the present emergency.

What happened at the Conference was that it was found impossible to secure agreement among the provinces on the question of their relinquishing jurisdiction over unemployment insurance to the Dominion. The situation, therefore, is that jurisdiction remains with the provinces.

Your Committee is continuing its study of this very complex question, in collaboration with an organization representing the life insurance companies.

**Minimum Wage Legislation.**—With the decline in the cost of living, there has been a demand in several of the provinces for a reduction of the minimum wage rates fixed by the minimum wage boards.

In Manitoba, as a result of representations made by the Prairie Division of the Association, a reduction of 10 per cent has been put into force. In British Columbia and Alberta, investigation of the question is still proceeding. In Ontario, the decision of the Board has been that the decline in the cost of living to date, does not warrant a reduction of the present minimums. After hearing an explanation of the situation which the Chairman of the Board, Mr. R. A. Stapells, was good enough to make to the Committee (of which he is a member), in which he emphasized that a very large number of employers are still paying wages in advance of the minimums, that one of the chief effects of minimum wage legislation is to provide protection for the better employers, and that it is quite uncertain whether the present reduction in the cost of living will continue, the Committee took the view that the action of the Minimum Wage Board was sound.

**Unemployment.**—Your Committee has naturally given considerable attention during the past year to the question of unemployment. In its view, the best service it could render was to impress upon the membership of the Association the desirability of spreading the available work among as many employees as possible with a view to keeping a maximum of people in at least part-time work. To this end three different circulars were, at intervals, sent out, the replies to which went to show that everything possible was being done to apply the principle of reducing hours rather than reducing the number of workers employed. Hours have been reduced to 40 per week, to 36, to 30, to 24; in other cases firms are working every other day, or every other week; certain firms are using hand labour instead of machine labour where this can be done without undue loss, and generally speaking, everything possible is being done to make the available work go as far as possible in the way of relieving unemployment. Your Committee once more desires to emphasize its view that while such reduction of hours as a means of helping to relieve unemployment is desirable and sound, it would not be wise by compulsory legislation to lay down any rigid rule as to the number of hours to be worked.

As regards government policy with respect to meeting the unemployment situation, it will be recalled that for the winter of 1930-31, the Dominion Government adopted the principle of providing employment by projecting public works and undertakings. \$20,000,000 was voted of which \$16,000,000 was to be spent on public works, while \$4,000,000 was allocated for direct relief. Agreements were entered into with the provinces providing for payment by the Dominion of 25 per cent of the cost of public works undertaken by municipalities to provide work for the unemployed, the provinces to contribute a like percentage. As regards the cost of direct relief, the Dominion was to contribute one-third, the balance being contributed, half by the provinces and half by the municipalities. Under this system public works were undertaken at a total cost of some \$68,730,000, and 3,975,355 man-days work were provided for 228,351 persons. Direct relief was given to some 146,000 persons.

For the winter 1931-1932, the same system was adhered to, the Dominion agreeing to contribute 25 per cent toward the cost of muni-

cipal public works in the five eastern provinces and 50 per cent in the four western provinces as well as 50 per cent toward the cost of provincial works and undertakings in all provinces, and a similar percentage in all provinces in connection with work carried out on the Trans-Canada Highway. Under this system, \$26,586,000 was contributed by the Dominion to provincial and municipal expenditures, while the Dominion itself spent \$3,400,000 on Federal works and undertakings. 6,917,000 men-days work were given to 339,000 persons. Direct relief was given to 741,241 persons, the Dominion, the provinces and the municipalities contributing each a third of the cost.

By the spring of 1932, the view had come to be unanimously held by all the provinces that "the situation did not permit of any further extension of programs of public works to relieve unemployment" and that the general policy should be one of providing direct relief.

Attention may be called to two new developments in connection with the carrying out of this policy, which are in accord with the views expressed by the Association at the last Annual General Meeting. One is that agreements have been entered into with all the provinces except Prince Edward Island providing for a Dominion-non-recoverable expenditure of one-third of an amount not to exceed \$600 per family for the purpose of establishing on the land, families, who would otherwise be in receipt of direct relief, the remaining two-thirds of the cost to be contributed by the provinces and municipalities. Under this scheme 1,436 have already been settled on the land. A second feature is that arrangements have been made with the provinces for the establishment of camps at various centres where single homeless persons can be provided with food, fuel, clothing, and so far as possible employed in useful work; provision is also made for the placing of such single persons, where possible, on farms. The cost is borne one hundred per cent by the Dominion, but not to exceed 40 cents per day, or in the case of persons placed on the farms, \$5 per month. The number of persons taken care of under this system rose from 12,244 for May, 1932, to 52,116 for February, 1933.

The number of persons in receipt of direct relief rose from 596,946 for May, 1932, to 1,395,961 for February, 1933.

Staggering as these figures are, and unsatisfactory as direct relief undoubtedly is, as compared with providing work, your Committee adheres to the view expressed at the last Annual General Meeting of the Association, viz., that public works should not be undertaken unless they are economically justifiable, and that for those who cannot be given employment on such works, or be placed on the land, the only practicable system under the circumstances is that of "carefully controlled and administered direct relief."

### Transportation

The Transportation Committee, in their report, pointed out the necessity for a general plan co-ordinating the various units of the transportation system of Canada—railways, highways, waterways and airways—and stated that the whole systems would suffer from

developing one of these units at the expense of the rest. The hope was expressed that the measures already taken by the Dominion and provincial authorities in the direction of co-ordination would be completed, and that the various units would co-operate in a general transportation plan. The committee also dealt with questions affecting ocean shipping and motor vehicle transport.

### Officers Elected

The following officers were elected for the ensuing year:

President—Mr. L. L. Anthes, of Toronto.

First Vice-President—Mr. James H. Webb, of Montreal.

Second Vice-President—Mr. W. R. Dynan, of Hamilton.

Treasurer—Mr. T. F. Monypenny, of Toronto.

## THE WHITLEY COUNCILS SCHEME

THE Whitley Councils Scheme is the title of a recent book by J. B. Seymour reviewing the progress of the industrial councils established in Britain during the first three years after the war. (London: P. S. King and Son, Ltd., 1932.) These councils were designed to improve industrial relations by providing for the co-operation of employers and work-people in the industries in which they were set up through regular meetings of representatives of both parties for the discussion of matters affecting the industry and those engaged in it. While the idea of such co-operation was not a new one yet the impetus given to all ideas for social improvement by the circumstances of the war led to an enthusiastic reception of the definite formulation of the scheme in the reports issued in 1917-18 by the Government's Committee on relations between employers and employed which was presided over by a former Speaker of the House of Commons, the Right Hon. J. H. Whitley. Fourteen years' experience appears to have proved the value of industrial councils even when consideration is given to the failure of some schemes largely through indifference and not through fault in the principle of joint discussion and action. An important factor in hindering development has been the industrial depression and consequent diversion of attention to other problems.

According to Mr. Seymour, 75 councils were set up between 1918 and the end of 1920. From 1921 to 1929, eight more were established together with two sectional trade councils and nine local councils. Of the 94 councils thus set up, 30 have ceased to function and a number of the remainder meet only quarterly or less frequently, 22 meeting only when required. Only a few councils have works committees. "The establishment of works committees has not been a success", most employers and trade unionists appearing "indifferent, if not hostile, to the idea." The industries with councils vary in importance and include many in which organization in em-

ployers' associations and trade unions was weak. One result of the establishment of councils has been the development of trade unions in these industries, but on the other hand it appears that such well-unionized industries as mining, engineering, cotton, building and shipbuilding, are not taking part in the Whitley Councils scheme.

An interesting phase of the movement is the establishment of councils in government and municipal departments. Under a National Council for the Civil Service are 72 department councils and a large number of committees. Departments employing general labour, engineering, shipbuilding and building labour have special councils for dealing with wages and other matters customarily settled on a trade basis. There are also national industrial councils in connection with the four services provided by municipal authorities—waterworks, gas, tramways and electricity supply. Even where these include undertakings owned by private companies, the one industrial council covers both the privately and publicly owned services.

Among the benefits attributed to councils are assistance in the elimination of grievances, promotion of goodwill between employers and employed, standardization of wages and working conditions in the various industries, and in education and training of workers. Co-operation between the industries and the Government in connection with regulations under the Factories' Acts, unemployment, rationalization, tariff and other matters is stated to have been of great benefit to both parties and to the public. While some of the councils do not deal directly with wage negotiations but leave this work to the trade unions and employers' associations, yet "a majority of the councils make the consideration of wages and conditions of employment their chief function. . . . Many councils provide machinery for undertaking conciliation duties, or for dealing with disputes by arbitration. . . . The constitutions of a large number of councils provide

that no stoppage of work shall take place until the matter in dispute has been considered by the council. . . . In some councils, permanent conciliation committees are retained, to avert the possibility of stoppage; in others, conciliation bodies are formed as the need arises. . . . Again, valuable work is done by arbitration boards set up by the councils. . . . It must not be forgotten that much "spade work" in the cause of industrial peace is constantly being done by works committees and district councils under the Whitley Scheme. While the activities of the National Council are often brought before the public notice, the valuable work of the subordinate bodies is sometimes overlooked. Works committees, especially, "are the most effective lightning conductors for the discharge of petty irritations."

Mr. Seymour summarizes the benefits already to the credit of joint industrial councils as follows: (a) They are agencies for their industries which are recognized by the

Government and by the industry itself; (b) They hold joint meetings during periods of peace—not merely *ad hoc* meetings in times of industrial unrest; (c) They have assisted in advancing organization and collective bargaining; (d) Their records offer evidence that they have helped to lessen strife in their industries.

In regard to the future, the author suggests that the present stagnation of the council movement might be transformed into activity in three ways: (1) The passage of the Industrial Councils Bill would remove one great disability now handicapping the councils—the knowledge that their decisions may not be carried out by all in the industry; (2) The formation of a national joint body representing all industry, which would ensure uniform policies, and a widespread application of Whitley principles; and (3) a government campaign for the development of the Whitley scheme, with aggressive action for the formation of new industrial councils and the revival of defunct ones.

## ANNUAL REPORT OF THE DIRECTOR OF THE INTERNATIONAL LABOUR ORGANIZATION

THE Director of the International Labour Organization, in his annual report presented to the 17th International Labour Conference in June, reviews and comments upon the events of the past year, and describes the activities of the I.L.O. in regard thereto. The year was dominated by the depression, which continued in deeper intensity, and the report consists for the most part of a study of its manifestations in industrial and social life throughout the world, and of an estimate of the permanent effects it is likely to produce on the economic and political structure of the future.

### The March of the Depression

"The march of the depression" is described in the first chapter. "It has overshadowed every human activity and has inevitably exercised a dominating influence on the work of the International Labour Organization. As it has progressed and deepened, the general estimate of its character has undergone a gradual modification. At its first onset, it was generally judged to be a new manifestation of what economists have come to term the 'business cycle,' that is to say another of those temporary set-backs caused by production out-running consumption during a period of rising prices but destined to be automatically checked by a reduction of output and prices to a level which would once more restore the

balance between supply and demand. It soon became evident, however, that explanations which availed to account for previous crises were not sufficient to explain its growing intensity."

The Director describes the series of "financial cataclysms" in the previous year, 1931, including Great Britain's abandonment of the gold standard, depriving the world of its monetary compass. "The crisis of credit superimposed on the fall of prices and the shrinkage of consumption tended to aggravate the general decline. Confidence diminished still further. Foreign lending practically ceased. Commercial transactions became still more hazardous as currency fluctuations were added to price fluctuations. Restrictions on trade and foreign exchanges, which were generally recognized to be a powerful contributory factor to the depression, were multiplied by Governments in their efforts to safeguard their balance of payments, upon which the stability of their currencies depended. Economic warfare and the political antagonisms which it engenders were intensified. Customs barriers, which economic opinion almost unanimously condemned as already overtopping all safe and reasonable limits, rose to even higher levels. As the inevitable sequel unemployment mounted steadily and ominously. Financial, economic and social security was progressively undermined, whence sprang

psychological disturbances bred of doubts and fears for the future, which in many countries found their expression in growing political unrest."

Such was the situation in the early months of 1932, and the "economic barometer" continued to fall during most of the year. First, the index of wholesale prices, except for a brief gain during the third quarter, fell to levels without precedent in modern times; wheat, for example, was cheaper than at any time since the 16th century. Second, the total value of world trade in the 3rd quarter of 1932 was only about one-third of the corresponding period of 1929; moreover the quantity of goods in foreign trade fell by 25 per cent—by far the largest fall on record. (Previous falls in prices were accompanied by a maintenance, or even an increase in quantities.) Third, the index of production showed no steady upward tendency: "as long as the purchasing power of the masses dependent on industry, and still more of the agricultural population, undergoes no revival, no general improvement of manufacturing production can be expected."

In the realm of finance, four more countries left the gold standard, leaving hardly any countries still on the gold standard without any reservation. On the other hand, there was a tendency towards stabilization in the value of most of the depreciated currencies, which suggests that international payments and national budgets were being brought into better equilibrium than in 1931.

"The necessary confidence was lacking which would tempt investors to launch their savings on fresh ventures, however promising, and thus to cause the wheels of industry and trade to turn at an accelerated pace. Moreover, to this general distrust of the economic future must be added widespread apprehension of the political situation in Europe, South America and the Far East, which has aggravated the want of confidence caused by the financial and economic confusion. All past experience suggests that wars and rumours of war are very potent factors in checking the flow of capital and the expansion of business. The cessation of international lending, which is one of the most serious features of the present position, is no doubt very largely due to political apprehensions. . . . Indeed, a general survey of the situation suggests that the economic fever is slowly burning itself out, but that the forces of recuperation are being fatally weakened by the political complications which have supervened. As the Preparatory Commission for the Economic Conference has emphasized, there is no path towards economic salvation save by whole-

hearted and extensive international co-operation. Such co-operation is plainly unthinkable as long as national rivalries and antagonisms are being fostered rather than eliminated."

### Social Aspects of the Depression

The social aspects of the depression are considered in the second chapter, under the headings unemployment, wages, and social insurance.

The present extent of unemployment is unprecedented, but the worker's ancient claim to the "right to work or maintenance," is now generally conceded. "It is important," the Director states, "to realize the scale of the national expenditure involved by the prevailing unemployment. In Great Britain expenditure out of the unemployment fund was £51 million during the year 1924-25, of which 28·3 per cent was contributed by the State. In 1931-32 the total had risen to £120 million, of which 72 per cent was contributed by the State, these sums being in addition to the heavy burden carried by the local authorities. In Germany, 1,071 million Reichmarks were spent on unemployment relief in 1928 (exclusive of local relief), of which only a small proportion was borne by the Federal and State Governments. In 1931 the figure had risen to 2,338 million, of which 38 per cent was borne by the Federal and State Governments. In France 652·5 million French francs were distributed by the public unemployment funds in the period April 1, 1931, to August 1, 1932, of which 400 million francs were met by the State, the remainder being borne by local authorities. In the Netherlands, unemployment expenditure, which was 5·2 million florins in 1924, had risen to 24·9 million florins in 1931, of which 32 per cent was borne by the Government. In Switzerland 1·6 million francs were spent in 1924, and 37·9 million in 1931, of which 84 per cent was borne by the public authorities including the communes. With regard to the United States, no accurate figures are available, but some idea of the amount expended on relief is indicated by an estimate made by the Children's Bureau of the United States Department of Labour, from which it appears that over 50 million dollars were spent during the single month of September, 1932, in the areas for which statistics are available.

The Director next discusses the economic value of these expenditures. Unemployment insurance is a form of national saving, and is "a social and economic investment," but new social problems arise when insurance funds are exhausted. "It is being asked

with growing insistence whether it is not better to subsidize work rather than idleness; whether expenditure on the construction of roads, railways, houses or ships, even though not immediately entirely remunerative, is not ultimately more economic than the disbursement of vast sums without any return at all.

One justification for 'unproductive' expenditure is that purchasing power is thereby distributed: "It helps to sustain the consuming market and to check the further shrinkage of agricultural and industrial production. . . . It may be surmised that unemployment expenditure was one of the influences which contributed substantially to check the decline of prices and production in Great Britain. . . . But at best, unemployment insurance and assistance are but palliatives. They do not replace work; and as the crisis lengthens out, it is increasingly realized that 'doles' without work are profoundly unsatisfactory from the standpoint both of the recipient and of the community. It is therefore worth casting a cursory glance on the efforts made in the last year to 'make' employment. Such efforts have taken two main forms—public works financed wholly or partly by the State, and inducements offered to employers to engage more workers."

The report proceeds to describe the public works programs that were undertaken by various governments during the year. "Public works are not only justifiable because of the direct employment which they afford, but still more on account of the impetus which they give to industry. At a time when money is accumulating in the banks, or is even being hoarded because it can find no safe outlet in private enterprise, one of the most effective methods of restoring it to circulation is by loans for public enterprises. It is now being forcibly argued by many economists that this is the most effective means of raising prices, and thus setting in motion the upward spiral which can alone remove depression. This policy has not been tried on a sufficiently large scale to test its soundness, but as the failure of all other methods to combat the fall of prices becomes apparent, the need for new and bolder measures is being increasingly felt. It may well be found that direct action by the State to mobilize dormant capital in order to set the wheels of industry revolving more rapidly by extensive schemes for housing and other forms of national reconstruction is an essential step to launching recovery."

Another method of stimulating work, which has so far been tried only in Germany, is that of "subsidized employment," whereby

financial inducement is offered by the State to employers to widen their activities and employ more workers. Mention is made also of labour camps, land allotments and other methods of providing occupation for unemployed persons.

After a discussion of the extent of unemployment in the various countries throughout the world, the Director proceeds to an analysis of the phenomenon, distinguishing between cyclical and "structural" unemployment. Changes in the industrial structure have resulted from the geographical redistribution of industry, with far-reaching social consequences. For example, when factories are set up in Asia or South America or Australia which supply needs formerly met by European or American factories, some degree of unemployment is created in the latter. "There is a further aspect of this question, which touches the International Labour Organization nearly. There is a growing anxiety among the workers in the older industrial countries lest their standards of living should be undermined by competition from countries accustomed to a much lower level of existence. . . . The International Labour Organization has already done much to create minimum standards through the gradual application of its Conventions, and nowhere have they produced more striking results than in some of the oversea countries where their introduction has probably marked a greater advance in social conditions than in most European countries. But the expansion of the world's industrial structure will probably bring the problems of competitive conditions into still greater prominence in the near future."

Moreover, as the standard of living improves, the demand for articles of prime necessity becomes relatively less important, thus producing a dislocation which results in temporary unemployment. Changes in agricultural methods, again, have important reactions on industry. "There is now strong reason for thinking, however, that the rate of displacement has been accelerated to such an extent in recent years that the readjustments required to furnish fresh avenues of employment have not kept pace with it. The consequence is that the interval of unemployment has been inordinately lengthened, or, in other words, the volume of technological unemployment at any given moment has been substantially increased."

The problem of technological unemployment is discussed at some length, the social effects of improved methods of production being estimated as follows:—

"It seems certain that when business activity revives, the capacity of production in most branches of industry will have been increased and the need for labour diminished. If this is true, it will be possible to resume production on the pre-crisis scale without re-engaging a considerable proportion of the workers who were then employed. A further period will be required, during which unemployment will remain at an abnormally high figure, before the workers whose services have become superfluous can be once more re-absorbed. . . . We are thus led back to the fundamental question of restoring the balance between production and consumption, which lies ultimately at the root of all unemployment, whether cyclical, structural or technological."

The decline in wage rates during the depression is next discussed. This fall has been compensated in most countries by a parallel decline in the cost of living. "It would, however, be completely erroneous to suppose that the maintenance of the purchasing value of wages means that the purchasing power of the working classes was also maintained. The index of real wages in most cases only means that those workers who were earning full wages throughout the year were not brought down to a substantially lower scale of living. It takes no account of the millions of workers who owing to unemployment or short time were unable to earn full wages during a part or even the whole of the year. In order to obtain a correct notion of the relative purchasing power of the wage earners, it is therefore necessary to look at the total wage bill, which tells a very different story from the real-wage index."

"Deflation of wages and prices," the Director states elsewhere, "must ultimately have for its effect such an inflation of all debts, including capital charges on plant and machinery and mortgages on land, that they will become unbearable and must largely be written off. This process, which is already taking place over a wide area, results in a further disturbance of the economic balance. It threatens the stability of banking institutions, tends to shake confidence still further and so increases the investor's reluctance to put his savings in circulation once more."

On the subject of wages the Director reaches the conclusion that wage cutting is no longer regarded as the path to salvation. Emphasis is now being increasingly laid on the necessity of restoring the worker's spending power and of enabling him to buy what agriculture and industry are able to produce in abundance. "Just as unemployment breeds more

unemployment, so employment breeds employment. Only when the masses are in a position to earn not less but more will the production both of the farmer and the worker begin to move once more on an upward instead of a downward curve."

The last section in the same chapter discusses the severe strain placed by the economic depression on social insurance systems.

### Action of the International Labour Organization

The third chapter is devoted to the action of the International Labour Organization—the progress of ratifications, the initiative taken in connection with the conference for financial and economic reconstruction, and the preparatory conference on the reduction of hours of work as a remedy for unemployment. "The International Labour Organization," it is claimed, "is plainly capable of playing an important part in the reconstruction of industrial life which is now seen to be required to meet the needs of the present day. The revision of the hours of work in the light of rationalization and unemployment is one of the first tasks. Like all the other transformations needed to bring about the social and economic readjustments which the crisis has shown to be necessary, it is full of difficulties. The scorn and abuse with which the notion was first greeted have always been the common lot of every new and vital idea. The wide-spread discussion which the Preparatory Conference evoked has already begun to clear the eyes of public opinion and to enable it to see that the problem of working time and leisure is one of urgent reality and not a visionary fantasy."

### Conclusion

In the conclusion to his report the Director describes the aims at which economic and social discussion is now being directed and sketches the various forms to be observed in "economic planning." "Looking back over the events of the last twelve months," he says, "it is impossible to resist the impression that the Organization is slowly advancing towards new problems and responsibilities. In its early years it was primarily concerned with laying down the basic standards from which social progress could be reckoned. Those standards have already been widely adopted in Europe and are gradually radiating out into the other continents.

"The regulation of labour conditions is no longer so much a matter of protecting the worker against abuse as a part of a rational organization of society. That is, after all, the

aim at which all economic and social discussion is now being more and more consciously directed. The belief in the automatic or semi-automatic operation of economic law tempered by spasmodic interventions of the State as the golden rule for the attainment of prosperity is now tacitly but surely passing into oblivion. One of the effects of the crisis has been to strike the death-blow at the doctrine of pure *laissez-faire* and to reinforce the demand for management in economic affairs.

"Whatever may have been the reasons for the breakdown of the older economy, whether it was not allowed to function with the necessary freedom or whether it is no longer workable under modern conditions, the present trend seems to indicate clearly that we are passing away from the period of self-regulating economics towards an economy of which the general lines will be determined by national and international planning. One of the implications of this transition is that social problems are no longer sharply distinguishable from economic problems. Such questions as unemployment, wage rates, hours of work, social insurance, are not merely questions affecting the well-being of the worker, but are also bound up with the question of maintaining the balance between production and consumption, upon which the soundness of any economic system finally depends."

One of the chief aims of economic planning, it is pointed out, is to secure that consumption shall keep pace with production. "Nothing is more responsible for the bitter feeling of frustration experienced by millions of young men and women all over the world than the knowledge that they are condemned to want and idleness at a time when greater plenty is within easier reach than their fathers ever knew. The assumption, which more or less held good in previous generations, that the consumers would automatically come forward to absorb all that new productive equipment could create, has been signally falsified by the event. Hence the demand for a systematic effort to adapt consumption to the capacities of production."

Some of the questions involved in any attempt to solve this problem are stated as follows: "Is it possible to raise wages in one country unless a corresponding increase takes place in competing countries, or unless it is compensated by further rationalization, which may mean further unemployment and thus defeat its own end? Is it possible to make wages the subject of international negotiations? Are truces against wage-cuts or international wage agreements in particular industries possibilities of the future, or even neces-

sary features of a properly regulated economic world? Can the consuming power of the masses in Asia and Africa be raised by international economic action, so as to augment the world's demand for what its industry can so readily supply? These may seem distant possibilities and yet they are none of them irrelevant to the present situation or to the preoccupations of the International Labour Organization."

Economic planning is also concerned with the question of the management of credit, in place of the old belief in the automatic operation of the economic system. "The management of credit and currency has always been the task of the central banks. Their intervention has, however, become much more active and frequent as the result of the crisis. Any national policy for the initiation of public works or any other measure for maintaining financial stability or for stimulating employment can only be planned and executed by the Government working in co-operation with the banking system.

"A third sphere in which international management is clearly emerging is in regard to the control of the production and prices of particular commodities. The immense accumulation of stocks in the case of wheat, cotton, sugar, rubber and other articles, indicates that a state of overproduction exists—that is to say, that greater quantities are being produced than the world is at present able effectively to absorb. In such circumstances, international agreements for the limitation of production are unquestionably valuable, at any rate as temporary measures. Another sphere of economic management is that of tariffs which always constituted a serious infringement on the doctrine of free and automatic economic adjustment."

"For better or for worse," the Director concludes, "we are passing into an age when financial, commercial and industrial processes will be subjected to planned direction in an increasing measure. Management will no doubt take many different forms and work through many different methods. Though it will involve a larger degree of public control, it is not necessarily inconsistent with the maintenance of private enterprise and initiative within very wide limits. Few people believe, however, that further depressions, perhaps even more disastrous than the present, can be avoided in the future, unless well-conceived and carefully executed measures are taken on an international scale to prevent them. This means that the appropriate machinery, national and international, must be set up. . . .

"One final reflection suggests itself. Prosperity, as we now see it, is not synonymous

with pure efficiency. Efficiency coupled with widespread unemployment cannot in the long run be economic. Planning, whether national or international, will fail in its purpose unless it is inspired by social as well as by economic aims. The maintenance and improvement of social standards is one of the conditions of a healthy economic organism. Social justice is at the foundation of prosperity and without prosperity there can be no stable peace. In the planning of the future, therefore, the International Labour Organization has an essential rôle to play, since its object is to reconcile material progress with social equity, without which no lasting advance of humanity is finally attainable."

The report is prefaced by a short but feeling reference to the heavy blow suffered by the Organization in the death of the first Director, and to the further heavy losses caused by the death of four members of the Governing Body.

### Meeting of the Governing Body

A meeting of the Governing Body of the International Labour Office was held in Geneva from April 27 to 29, 1933.

Provisionally, and subject to a final choice to be made in October, the Governing Body selected the following questions for possible consideration at the 1935 Conference: freedom of association; holidays with pay; unemployment among young persons; methods and conditions of recruiting native labour; living-conditions for workers; regulation of the opening and closing of shops; employment of children in the cinema industry.

The representative of the Japanese Government announced that it would continue to collaborate with the International Labour Organization, notwithstanding its notice of withdrawal from the League.

The Director of the International Labour Office was authorized to call a meeting of the Joint Maritime Commission before the end of this year.

The Governing Body adopted the estimates for 1934 of the International Labour Organization, the net total after deducting receipts from sales of publications and other appropriations-in-aid being 8,257,876 francs, a decrease of 594,096 francs, or 6.71 per cent, as compared with the budget for 1933.

The following were nominated to represent the Organization at the World Economic and Monetary Conference: Government Representatives: Sir Atul Chatterjee (substitutes, Mr. Riddell and Mr. Engel); Employers

Representatives: Mr. Oersted (substitute, Mr. Forbes Watson); Workers Representatives: Mr. Jouhaux (substitute, Mr. Schurch).

### Safety in the Manufacture and Use of Celluloid

Continuing its series of monographs on industrial safety, the International Labour Office (League of Nations) has just published, under the above title, a report on safety in connection with the manufacture and handling of celluloid. The report begins with a general survey dealing with the distribution and economic importance of celluloid, the nature and uses of the material, the dangers involved for the workers employed and the neighbourhood of undertakings, and the substitutes available. This is followed by a description of technical safety measures, for the protection both of the workers and of the neighbourhood, in the manufacture of nitrocellulose, celluloid, celluloid goods, film and film bases, the preparation of cinematographic films, celluloid depots, homework, packing and transport.

The second part of the monograph gives the safety regulations in force in various countries, including Denmark, France, Germany, Great Britain, Italy, Japan and Sweden.

The Quebec Women's Minimum Wage Board announced recently that the orders of the Board would in future be rigidly enforced. Fifteen clothing factory proprietors were to be prosecuted in court. Mr. Gustave Franq, chairman of the Board, stated that, "owing to disrupted conditions in the clothing trade, many firms are not operating but letting their manufacturing out to sub-contractors, who are in many cases 'fly-by-night' factory owners. Some of these are paying their needle workers less than the minimum wage of \$12.50 per week for experienced workers and \$7 to \$11 per week for apprentices."

The Ontario Mother's Allowance Commission and the Old Age Pension Board have been reorganized, to consist of the following members:—

*Mothers' Allowance Commission.*—Hon. Dr. D. J. Jamieson, chairman; Mr. M. A. Sorsoleil, Deputy Minister of Welfare; and Mr. H. Bentley, chief investigator.

*Old Age Pension Board.*—Hon. Dr. D. J. Jamieson, chairman; Mr. M. A. Sorsoleil, and Mr. C. H. Green, chief directors. Miss C. V. McKechnie will serve as secretary of both commissions.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN APRIL, 1933

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on May 1 was 7,998, the employees on their payrolls numbering 714,891 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for April, was 1,716, having an aggregate membership of 153,623 persons. It should be un-

derstood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 60 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of May, 1933, as Reported by Employers

The Dominion Bureau of Statistics tabulated reports from 7,998 firms who reported a substantial increase in employment on May 1; the payrolls of these employers aggregated 714,891 persons, as compared with 699,414 in the preceding month. This increase of nearly 15,500 in the staffs of the co-operating establishments exceeded the gain recorded in any month since September, 1931, though it was rather smaller than the average increase recorded on May 1 as compared with April 1 in the years since 1921. The curve of employment, after adjustment for seasonal influences, accordingly declined slightly. The crude index stood at 77.6, as compared with 76.0 in the preceding month and 87.5 on May 1, 1932, while on the same date in the eleven preceding years, it was as follows:—1931, 102.2; 1930, 111.4; 1929, 116.2; 1928, 106.8; 1927, 101.8; 1926, 95.4; 1925, 91.9; 1924, 92.9; 1923, 92.5; 1922, 84.3, and 1921, 85.1.

Construction, transportation and manufacturing recorded the greatest improvement at the beginning of May. Mining (except coal-mining) and retail trade were also considerably more active. On the other hand, there was a seasonal contraction in coal-mining; communications, services and wholesale trade also released employees. As an indication of the better feeling now prevailing in many lines of business, it is significant that the increases already mentioned in construction and transportation provided work for approximately twice as many workers as those reported in the same industries on May 1 of last year, while the advance in manufacturing at the

beginning of May of the present year is a reversal of the tendency manifested on the same date in 1932.

#### Employment by Economic Areas

Heightened activity was reported in all provinces; employers in Quebec showed the greatest actual gain in personnel, while the percentage increase in British Columbia was highest.

*Maritime Provinces.*—For the third consecutive month, employment in the Maritime Provinces advanced, the upward movement comparing favourably with the decline recorded on May 1, 1932. The index then, however, was over seven points higher than on the date under review, when it stood at 80.3. Five hundred and eighty-three firms reported 55,849 employees, or 1,299 more than in their last return. Manufacturing, especially in fish-preserving factories, and construction reported improvement, while transportation released some workers owing to the closing of the winter ports.

*Quebec.*—Conditions improved in Quebec, according to 1,925 employers with 204,021 workers, as against 198,120 in the preceding month. Large increases were reported in transportation, building and highway construction and in manufacturing as a whole, notably of textile, lumber and iron and steel products. Services and logging, on the other hand, were slacker, while within the manufacturing division, considerably reduced activity was noted in tobacco factories. Employment was in smaller volume than on the

same date of a year ago, although the seasonal advance then indicated had provided work for less than half as many workers as were added to the staffs of the firms reporting for May 1, 1933.

*Ontario.*—Largely owing to a favourable movement in transportation, construction and trade, there was an increase in employment in Ontario; manufacturing, communications and services, however, reported curtailment. A general decline had been indicated at the beginning of May of last year, but the index was then some ten points higher. The work-

*British Columbia.*—The increase in British Columbia was decidedly more extensive than that recorded in the spring of last year, but the index was then many points higher. An aggregate payroll of 59,034 workers was indicated by the 785 firms furnishing data, who had 56,142 employees in the preceding month. Logging, building, highway and railway construction and manufacturing showed substantial improvement, that in the last-named taking place chiefly in the fish-preserving and lumber groups. Transportation and mining, however, were not so active.

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

ing forces of the 3,514 firms co-operating on May 1, 1933, aggregated 297,869 employees, compared with 293,691 on April 1.

*Prairie Provinces.*—Manufacturing, construction and retail trade showed greater activity; in the first-named group, most of the gain occurred in lumber and non-metallic mineral factories. On the other hand, coal-mining, transportation, services and wholesale trade recorded reductions. Statements were tabulated from 1,191 employers in the Prairies, whose staffs rose from 96,909 persons on April 1, to 98,118 on the date under review. This advance was rather smaller than that registered at the beginning of May, 1932, when the index was higher than on the date under review.

Table I gives index numbers by economic areas.

### Employment by Cities

Quebec City, Montreal, Toronto, Ottawa, Windsor and the adjoining Border Cities and Vancouver showed improvement, but the tendency was downward in Hamilton and Winnipeg.

*Montreal.*—Transportation recorded a substantial seasonal advance in Montreal, and manufacturing and building construction were also busier; within the manufacturing group, decided increases occurred in textile and iron and steel factories, while tobacco works showed considerable curtailment. Services and trade also reported decline, though on a small scale. The 1,102 co-operating em-

ployers reported 117,567 persons on their payrolls compared with 113,439 on April 1. The level of employment was lower than on May 1, 1932, when employment had remained practically the same as in the preceding month.

*Quebec.*—Statements were tabulated from 149 firms with 11,695 employees, as against 11,523 on April 1. Most of the improvement took place in shipping and manufacturing, while other groups showed only slight general changes. The gain involved a smaller number of workers than that recorded on May 1, 1932, when the index was higher.

*Toronto.*—Building construction, retail trade and transportation reported increases in personnel in Toronto, while manufacturing showed very little change on the whole, and services were slacker. According to data furnished by 1,186 employers, their payrolls aggregated 102,190 persons, as compared with 101,513 at the beginning of April. Curtailment had been indicated on May 1 of last year, but employment was then in greater volume.

*Ottawa.*—Construction, transportation, manufacturing and trade registered moderate im-

NOTE.—The "Relative Weight" in Table 1 shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

|  | Canada | Maritime<br>Provinces | Quebec | Ontario | Prairie<br>Provinces | British<br>Columbia |
|--|--------|-----------------------|--------|---------|----------------------|---------------------|
| May 1, 1921.....   | 85.1   | 98.2                  | 77.0   | 89.0    | 86.0                 | 79.9                |
| May 1, 1922.....   | 84.3   | 92.4                  | 77.4   | 87.8    | 83.0                 | 81.0                |
| May 1, 1923.....   | 92.5   | 101.0                 | 86.1   | 97.6    | 89.8                 | 86.4                |

\* Revised index.

provement in Ottawa; the general advance in the city involved a larger number of persons than that noted at the beginning of May, 1932, but the index then was higher. Statistics were tabulated from 152 firms employing 11,028 persons, compared with 10,750 on April 1.

*Hamilton.*—A combined working force of 21,800 persons was reported by the 234 co-operating establishments, who had 22,282 employees on April 1. Manufacturing was quieter, while trade and transportation showed increased activity. Employment was at a lower level than in the same month of 1932, when a smaller recession had been indicated.

*Windsor and the Adjacent Border Cities.*—Further improvement was noted in the Border Cities, where employment has increased steadily from the beginning of the year, the reporting firms having added over 2,200 persons to their staffs since December, 1932. Returns for May 1 were tabulated from 135 employers with 10,286 workers, compared with 10,082 in the preceding month. Most of the gain occurred in automobile factories. A decrease in personnel had been indicated by the establishments reporting on May 1, 1932; employment was then at a higher level.

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

| Relative Weight of<br>Employment by<br>Cities as at May 1,<br>1933..... | 16.4     | 1.6    | 14.3    | 1.5    | 3.0      | 1.4     | 4.5      | 3.4       |

**Winnipeg.**—Retail trade was rather brisker, but reduced activity was indicated in construction, while manufacturing showed no general change. The 392 co-operating employers had 32,168 persons on their payrolls, compared with 32,464 on April 1. Employment was in less volume than on the same date of last year, when a decline had also been noted.

**Vancouver.**—Manufacturing activity increased in Vancouver, the lumber group in particular showing improvement; on the other hand, transportation released some employees. According to data received from 341

firms, they employed an aggregate working force of 24,534 persons, compared with 24,410 on April 1. The index was lower than at the beginning of May of a year ago, when a slight falling-off had been reported.

Index numbers by cities are given in Table II.

### Manufacturing

Employment in manufactures showed a further increase at the beginning of May, this being the fourth consecutive gain indicated since midwinter. During this period, nearly 11,300 persons were added to the payrolls of

**NOTE.**—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

|   | All industries | Manufacturing | Logging | Mining | Communications | Transportation | Construction | Services | Trade |

\* Revised index.

the co-operating plants. The largest advances on May 1 occurred in lumber and fish-preserving establishments, but fur, leather, vegetable food, chemical, clay, glass and stone, electric current, iron and steel and non-metallic mineral factories also showed im-

provement. On the other hand, tobacco, electrical apparatus, non-ferrous metal and rubber works were slacker. Returns were tabulated from 4,919 manufacturers having 380,143 employees, compared with 376,619 on April 1. A considerable decline had been recorded on

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1928=100)

| Industries                                | Relative weight | May 1, 1933 | April 1, 1933 | May 1, 1932 | May 1, 1931 | May 1, 1930 | May 1, 1929 | May 1, 1928 |

<sup>1</sup> The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

May 1, 1932, but the index was then nine points higher.

*Animal Products, Edible.*—Continued and larger increases in employment were noted in fish-packing plants and dairies; the improvement was more extensive than that reported on May 1, 1932, when the index was fractionally lower. Statements were tabulated from 250 firms in this group, employing 17,706 workers, or 1,311 more than at the beginning of April. The expansion took place chiefly in the Maritime Provinces and British Columbia, but, except in Quebec, the trend in the group as a whole was upward.

*Fur and Fur Products.*—Employment in the fur division gained, according to the 44 co-operating manufacturers, who had 1,415 workers, compared with 1,262 on April 1. Employment was in rather less volume than in the corresponding period last year, when a smaller increase had been indicated.

*Leather and Products.*—Employment in boot and shoe and other leather factories showed improvement, according to 249 manufacturers with 17,776 employees, as compared with 17,439 in the preceding month. Gains occurred in Quebec and Ontario. The increase exceeded that noted on May 1, 1932, but the index was then slightly higher.

*Lumber and Products.*—Seasonal activity caused a pronounced advance in this group, particularly in sawmills. Data were received from 755 employers of 25,386 persons, as against 23,237 in the preceding month. There were gains in all provinces, those in British Columbia being greatest. Much smaller additions to staffs had been registered on May 1, 1932; the index then, however, was decidedly above its level at the beginning of May this year.

*Plant Products, Edible.*—There was an increase in personnel in vegetable food factories, chiefly in fruit and vegetable canneries. The general advance involved a slightly smaller number of persons than that noted on May 1, 1932, when the index number stood at 93.4, compared with 88 at the beginning of May this year. Statements were compiled from 381 employers, whose payrolls aggregated 24,811 persons, as compared with 24,675 on April 1. The gains took place chiefly in Ontario, while the tendency in the Maritime Provinces was downward.

*Pulp and Paper Products.*—There was little general change in these industries, in which employment was in smaller volume than in the spring of 1932; the movement had then been unfavourable. Increases took place on the date under review in pulp and paper mills,

but printing and publishing and other paper-using plants showed curtailment. The working forces of the 557 co-operating establishments aggregated 49,414 employees, as against 49,358 in their last report. Heightened activity was shown in Quebec and Ontario, but elsewhere there were reductions.

*Rubber Products.*—Losses were noted in rubber factories on May 1, 1933, but these were on a much smaller scale than those reported on the same date in 1932, when the index was many points higher. Returns were tabulated from 45 manufacturers employing 9,522 workers, or 100 fewer than at the commencement of April. Most of the decrease was in Ontario.

*Textile Products.*—Practically no change on the whole occurred in this group at the beginning of May, according to statistics from 849 manufacturers having 77,445 persons on their payrolls. Cotton, garment and personal furnishing and miscellaneous textile factories added to their forces, but woollen, hosiery and knitting mills were slacker. Declines had been noted on May 1 of last year, when the index stood at 100.7, compared with 91.5 on the date under review.

*Tobacco, Distilled and Malt Liquors.*—Data were received from 146 plants in this group employing 13,579 persons, or 1,144 fewer than in the preceding month. This decrease, which compared unfavourably with the upward movement recorded on May 1 of last year, took place chiefly in tobacco manufacturing in Quebec. Employment was at a lower level than on the same date in 1932.

*Chemicals and Allied Products.*—Employment in chemical and allied products showed a moderate increase, this occurring chiefly in the Maritime Provinces. Information was compiled from 149 manufacturers, whose staffs included 8,105 workers, as against 7,895 in April. The gain was greater than that of May 1 a year ago, when the index was a few points higher.

*Clay, Glass and Stone Products.*—Building material factories in Quebec and the Prairie Provinces indicated seasonal improvement; the general gain involved much the same number of additional employees as that reported at the beginning of May last year, when the index number was much higher. The 178 co-operating firms had 5,401 employees, as against 5,192 in the preceding month.

*Electric Current.*—Improvement was recorded on May 1 in electric current plants, in which activity was not so great as in the spring of 1932. Statements were received from 91

companies employing 13,326 workers, an increase of 181 over their April 1 forces.

*Electrical Apparatus.*—The trend of employment in this group was downward, 437 persons being let out from the payrolls of the 85 reporting establishments, which had 8,925 employees. Curtailment had also been registered on May 1, 1932, when the index was much higher.

*Iron and Steel Products.*—The rolling mill, iron pipe and some other groups reported decreases in activity, but there were gains in automobile, heating appliance, iron and steel fabrication, foundry and machine shop and sheet metal factories. Returns were tabulated from 772 manufacturers with 79,419 operatives, as compared with 78,784 in the preceding month. Contractions had been indicated at the beginning of May of last year, but employment was then in greater volume. Quebec and Ontario reported improvement on the date under review, while elsewhere a falling-off was noted.

*Non-ferrous Metal Products.*—Non-ferrous metal products showed a decline in employment, according to data from 129 firms with a working force of 11,643 persons, or 306 fewer than on April 1. A much greater reduction in staff had been recorded in this group in the same month in 1932, but the index number was then higher. Most of the loss on May 1 occurred in smelters and refineries, but all branches of the group were rather slacker.

*Mineral Products.*—Improvement was indicated in the mineral products division; the increase was somewhat smaller than that which occurred on May 1 a year ago, when the index number was higher than on the date under review. Reports were received from 112 manufacturers, whose payrolls included 11,436 persons, as compared with 11,240 in the preceding month. The greatest advance was in the Prairie Provinces.

### Logging

Very little general change took place in logging, additions to staff in Ontario and British Columbia nearly offsetting losses in the remaining provinces; the 225 co-operating firms employed 9,614 men, or 71 fewer than in April. Gains were registered at the beginning of May, 1932, but the index was then a few points lower.

### Mining

*Coal.*—Employment in coal-mining showed a seasonal contraction, which was slightly larger than that noted in the same month of last year. The index then was somewhat higher than on May 1, 1933. Data were received from 89 operators with 20,946 em-

ployees, as compared with 22,228 in the preceding month. The decrease took place mainly in the western coal fields.

*Metallic Ores.*—There was an increase in metallic ore mines, chiefly in British Columbia. An aggregate working force of 15,764 persons was employed by the 68 co-operating firms, who had 15,522 workers in their last report. A decline had been indicated at the beginning of May a year ago, when activity was not quite so great.

*Non-metallic Minerals (Other than Coal).*—Employment in this group showed an advance; 72 employers enlarged their payrolls by 277 workers to 3,893 at the beginning of May. Quarries and other divisions reported heightened activity. The index was decidedly lower than on May 1, 1932, when moderate improvement was reported.

### Communications

A decrease was noted in telegraph and telephone operation, in which the level of employment was lower than on the corresponding date of last year. The co-operating branches and companies reported an aggregate working force of 22,031 persons, compared with 22,255 on April 1, 1933.

### Transportation

*Street Railways and Cartage.*—Improvement was shown in local transportation at the beginning of May, when the 178 firms from whom information was received, reported 24,179 employees, or 461 more than in the preceding month. The index was slightly higher than on the same date in 1932, when smaller gains had been noted. Quebec and Ontario registered most of the advance recorded on May 1, 1933.

*Steam Railways.*—Steam railway operation afforded less employment in the Maritime and Western Provinces, while Quebec and Ontario showed increased activity. Statements were received from 99 employers in this division, whose payrolls increased from 53,699 persons on April 1 to 53,723 at the beginning of May. A minor gain had been noted on May 1, 1932, and the index was then higher.

*Shipping and Stevedoring.*—A combined staff of 15,575 men, as compared with 10,424 in the preceding month, was reported by the 90 firms furnishing statistics in the water transportation group. This gain was very much greater than that noted on the same date last year, when the index was lower. Reductions in the Maritime Provinces and British Columbia were offset by increases in Quebec and Ontario.

### Construction and Maintenance

*Building.*—Employment in building construction showed a considerable expansion, although the industry was not so active as on May 1, 1932. The working forces of the 632 co-operating contractors aggregated 11,366 persons, as against 10,062 at the beginning of April. The tendency was favourable in Quebec, Ontario and the Prairie Provinces.

*Highway.*—Work on roads and highways increased at the beginning of May; 3,372 men were added to the forces of the 325 employers making returns, who had 34,728 workers on May 1. The largest gains were in the Maritime Provinces and Quebec, although there were advances in all except the Prairie Provinces. Reductions in staff were indicated on the same date last year, but employment was then more active than in the spring of the present year.

*Railway.*—Thirty-five companies and divisional superintendents in this group employed 24,160 workers, as against 21,655 in their last report. The Western Provinces recorded most of the increase; moderate improvement took place in the Maritime Provinces and Ontario, while the trend was downward in Quebec. Expansion involving the same number of workers was noted at the beginning of May a year ago; the index number then, however,

stood above its level on the date under review.

### Services

The service group, especially the laundering and dry cleaning division, reported lowered activity, according to statements from 311 establishments employing 19,677 persons, as against 20,091 in their last report. Employment was not so brisk as on May 1 in 1932, when gains had been indicated.

### Trade

Continued additions to personnel were shown in retail trade, but wholesalers released some employees; 872 trading establishments enlarged their forces by 608 persons to 79,092 on the date under review. The index was lower than at the beginning of May of a year ago, the improvement then reported having been on a larger scale. The increase on the date under review took place chiefly in Ontario.

### Tables

The accompanying tables give index numbers of employment by economic areas, leading cities, and industries. The columns headed "relative weight," show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on May 1, 1933.

## (2) Unemployment in Trade Unions at the Close of April, 1933

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work outside their own trades or who are idle due to illness are not considered as unemployed while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The percentage of unemployment reported by local trade unions at the close of April was rather smaller than that manifest at the end of the previous month, 24.5 per cent of the members being without work, in contrast with 25.1 per cent in March. Slight curtailment of activity, however, was shown from April a year ago, when 23.0 per cent of the members reported were idle. For the month under review returns were received from 1,716 labour organizations, embracing a membership of 153,623 persons, of whom 37,659 were idle

at the end of the month. Alberta and Manitoba were the only provinces to report a lowering of the employment volume available from March, the coal mines accounting mostly for the moderate adverse change in Alberta, while in Manitoba the decline was but nominal. Of the improvement in the remaining provinces none was outstanding, Saskatchewan with a 3 per cent gain showing the greatest advancement. In making a comparison with the returns for April last year Nova Scotia unions showed a large employment drop during the month reviewed, followed by recessions of much lesser magnitude among Ontario, Alberta, British Columbia, and Saskatchewan unions. On the other hand, conditions for Quebec members were moderately improved, and increases in activity on a small scale occurred for Manitoba and New Brunswick unions.

Reports on unemployment for the largest city in each province except Prince Edward Island are tabulated separately each month. During April, Halifax unions reported a noteworthy falling off in activity from the previous month, lesser declines being reported by Van-

couver unions, while in Edmonton and Toronto small-sized reductions only were evident. On the other hand, the trend of employment for Saint John, Montreal, Regina and Winnipeg unions was upward from March, though the gain in each of these cities was under 2 per cent. Both Montreal and Halifax reported moderate improvement in conditions from April last year, and the situation for Winnipeg members was slightly better. Toronto and Saint John, on the contrary, indicated employment declines of 4.0 per cent and 3.4 per cent respectively, with recessions on a somewhat smaller scale from Vancouver. Minor

son with 28.2 per cent in March. Hat and cap, glass and leather workers, metal polishers, and meat cutters and butchers all indicated noteworthy expansion from March, though the membership reported by these tradesmen formed but a small share of the total for the group. Among cigarmakers and textile workers improvement on a small scale was shown, gains of less than 1 per cent being reported by printing tradesmen, iron and steel workers, and bakers and confectioners. Of the reductions which just more than offset these gains, the most important was registered by garment workers. Some lessening of the employment

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

contractions only, however, were reflected by Regina and Edmonton unions.

Accompanying this article is a chart showing the trend of unemployment by months from January, 1927, to date. During April the curve projected slightly downward from March, indicative of a better employment tendency, remaining at the close of the month somewhat above the level reached in April a year ago when the situation was slightly more favourable than in the month reviewed.

Unemployment in the manufacturing industries remained in practically the same volume during April as in the previous month, the 457 unions making returns with 43,598 members showing 28.3 per cent of idleness in compari-

son with 28.2 per cent in March. Hat and cap, glass and leather workers, metal polishers, and meat cutters and fur workers, however, were afforded the same volume of activity as in the preceding month. Employment in the manufacturing industries showed some curtailment from April, 1932, when 25.5 per cent of the membership involved was without work, a large factor in this adverse movement being the unemployment increases shown by iron and steel workers during the month reviewed. Large percentage contractions were evident among cigarmakers and metal polishers, which, however, did not affect the situation to any great extent, as their combined membership was small; and among leather, textile,

brewery and glass workers, printing tradesmen, and bakers and confectioners the situation also declined. Garment, wood, and fur workers, and meat cutters and butchers, on the other hand, were considerably better engaged than in April a year ago, and the trend for pulp and paper makers, hat and cap workers, and general labourers was towards greater activity, though the gains were quite slight.

From unions of coal miners 53 reports were tabulated during April, covering a membership of 13,915 persons, 2,382 or 17.1 per cent of whom were idle on the last day of the month contrasted with percentages of 17.6 in March and 13.3 in April, 1932. The unem-

ployment percentage for British Columbia miners showed a substantial drop from March, while in Alberta slacker conditions prevailed, and in Nova Scotia nominal contractions only in activity were reported. Contrasted with the returns for April of last year in the mining industry, employment for British Columbia miners was at a considerably lower level during the month reviewed, with recessions on a small scale shown by Nova Scotia unions. On the other hand, the situation in Alberta was somewhat improved.

The building and construction trades were afforded a greater volume of employment during April than in the preceding month, though conditions still remained quite depressed. This was apparent from the returns received from a total of 220 associations of building tradesmen with an aggregate of 18,533 members, 12,367 or 66.7 per cent of whom were without work on the last day of the month as compared with 71.0 per cent in March. Building and construction operations were somewhat restricted from April of last year when the unemployment percentage reported was 62.7. Granite and stonecutters, and painters, decorators and paperhangers showed a decidedly better situation during April from the previous month, and marked gains in activity were reported by plumbers and steamfitters, and hod carriers and building labourers. Among carpenters and joiners, the tendency was toward a greater employment volume, though the change was but fractional. On the other hand, tile layers, lathers and roofers were considerably slacker than in March, and nominal contractions only were reflected by bricklayers, masons and plasterers, and electrical workers. Among bridge and structural iron workers the same conditions prevailed as in March. Increased employment on a substantial scale from April, 1932, was noted by painters, decorators and paperhangers, while granite and stone cutters, and plumbers and steamfitters reported gains of much lesser proportions. Conditions were considerably quieter for carpenters and joiners, bridge and structural iron workers, and tile layers, lathers and roofers than in April last year, and among hod carriers and building labourers, bricklayers, masons and plasterers, and electrical workers there was some employment cessation.

The transportation industries afforded the same volume of employment during April as in the preceding month, the 746 associations making returns with 56,081 members indicating 14.1 per cent of idleness, which percentage was also recorded in March. In the steam railway division, the returns of which comprised over 79 per cent of the entire group membership reported, unemployment remained

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

| Month             | N.S. and Prince Edward Island | New Brunswick | Quebec | Ontario | Manitoba | Saskatchewan | Alberta | British Columbia | Canada |
|-------------------|-------------------------------|---------------|--------|---------|----------|--------------|---------|------------------|--------|
| Average 1919..... | 3.1                           | 2.0           | 3.4    | 2.7     | 2.1      | 3.2          | 2.0     | 7.9              | 3.4    |
| Average 1920..... | 1.8                           | 2.0           | 7.2    | 3.4     | 3.1      | 3.2          | 2.8     | 11.2             | 4.9    |
| Average 1921..... | 11.3                          | 8.5           | 16.6   | 9.7     | 5.8      | 7.8          | 7.8     | 23.5             | 12.7   |
| Average 1922..... | 7.1                           | 4.3           | 8.6    | 5.0     | 8.9      | 5.4          | 6.1     | 12.4             | 7.1    |
| Average 1923..... | 8.0                           | 2.0           | 6.7    | 3.7     | 5.8      | 3.0          | 6.0     | 5.8              | 4.9    |
| Average 1924..... | 5.1                           | 4.0           | 10.9   | 6.1     | 6.5      | 4.3          | 5.4     | 5.8              | 7.2    |
| Average 1925..... | 5.0                           | 3.6           | 10.9   | 5.5     | 5.1      | 3.3          | 8.4     | 5.7              | 7.0    |
| Average 1926..... | 7.8                           | 2.1           | 6.8    | 4.2     | 3.6      | 3.0          | 4.9     | 5.5              | 5.1    |
| Average 1927..... | 3.7                           | 1.9           | 6.8    | 4.1     | 4.4      | 3.2          | 4.1     | 5.5              | 4.9    |
| Average 1928..... | 4.0                           | 1.2           | 6.1    | 3.5     | 4.2      | 3.0          | 4.2     | 5.1              | 4.5    |
| Average 1929..... | 4.0                           | 1.6           | 7.7    | 4.3     | 7.1      | 5.3          | 6.4     | 5.9              | 5.7    |
| Average 1930..... | 5.4                           | 3.7           | 14.0   | 10.4    | 9.6      | 10.6         | 13.3    | 11.6             | 11.1   |
| Average 1931..... | 8.5                           | 9.2           | 19.3   | 17.2    | 15.7     | 15.6         | 19.4    | 17.6             | 16.8   |
| Average 1932..... | 9.6                           | 14.4          | 26.4   | 23.7    | 20.0     | 15.8         | 22.6    | 21.4             | 22.0   |
| April, 1919.....  | 2.4                           | 2.5           | 4.4    | 4.3     | 1.7      | 4.0          | 2.3     | 10.1             | 4.4    |
| April, 1920.....  | 0.6                           | 1.0           | 2.6    | 2.3     | 2.7      | 3.2          | 1.7     | 6.0              | 2.5    |
| April, 1921.....  | 21.6                          | 12.4          | 20.7   | 11.9    | 10.1     | 12.8         | 12.7    | 25.7             | 16.3   |
| April, 1922.....  | 20.0                          | 3.5           | 10.6   | 5.9     | 14.9     | 8.7          | 12.3    | 19.5             | 10.4   |
| April, 1923.....  | 2.2                           | 0.5           | 4.9    | 2.8     | 5.3      | 3.7          | 11.9    | 5.4              | 4.6    |
| April, 1924.....  | 2.2                           | 4.5           | 6.3    | 5.4     | 7.2      | 5.2          | 4.1     | 2.2              | 5.1    |
| April, 1925.....  | 2.9                           | 4.5           | 13.6   | 6.2     | 6.5      | 4.1          | 15.6    | 6.6              | 8.7    |
| April, 1926.....  | 17.2                          | 1.8           | 11.0   | 4.3     | 4.9      | 4.7          | 4.6     | 7.9              | 7.3    |
| April, 1927.....  | 7.5                           | 2.7           | 9.3    | 4.0     | 6.2      | 5.1          | 7.2     | 3.6              | 6.0    |
| April, 1928.....  | 7.4                           | 1.8           | 6.2    | 4.1     | 5.2      | 4.2          | 6.8     | 3.3              | 5.2    |
| April, 1929.....  | 6.0                           | 1.3           | 9.3    | 3.0     | 3.9      | 3.9          | 5.3     | 6.0              | 5.3    |
| April, 1930.....  | 5.6                           | 2.8           | 8.3    | 8.8     | 8.9      | 11.0         | 15.6    | 9.7              | 9.0    |
| Jan., 1931.....   | 7.4                           | 10.5          | 16.1   | 13.4    | 15.1     | 18.3         | 15.7    | 16.9             | 16.0   |
| Feb., 1931.....   | 6.7                           | 8.5           | 15.7   | 17.1    | 15.6     | 19.0         | 18.2    | 16.3             | 15.6   |
| Mar., 1931.....   | 6.5                           | 10.9          | 14.0   | 16.0    | 14.7     | 19.5         | 21.8    | 18.8             | 15.5   |
| April, 1931.....  | 7.2                           | 9.8           | 14.9   | 15.2    | 14.4     | 14.6         | 20.3    | 17.8             | 14.9   |
| May, 1931.....    | 6.4                           | 10.3          | 20.5   | 15.6    | 13.0     | 12.8         | 22.0    | 14.2             | 16.2   |
| June, 1931.....   | 7.2                           | 6.5           | 20.0   | 16.2    | 14.1     | 13.5         | 21.7    | 15.6             | 16.3   |
| July, 1931.....   | 7.2                           | 7.0           | 17.0   | 16.6    | 14.7     | 14.5         | 25.3    | 16.3             | 16.2   |

at exactly the same level during both months compared. Navigation workers, however, were much better engaged than in March, the situation for street and electric railway employees and teamsters and chauffeurs showing practically no change. Compared with the returns for April, 1932, in the transportation industries when 13.2 per cent of the members reported were without work, steam railway employees indicated somewhat lessened activity during the month surveyed, a nominal adverse change only being recorded by street and electric railway employees. On the other hand, a more favourable employment volume was available to navigation workers and teamsters and chauffeurs.

Activity for retail clerks which attained a high level in March subsided slightly during April, the 6 unions making returns with 1,078 members showing 2.0 per cent of idleness at the close of the month, contrasted with a percentage of 0.8 in March. Nominal gains in employment only were reported from April a year ago when 2.9 per cent of the members were unemployed.

A slightly better situation was indicated by civic employees during April from the previous month as shown by the reports compiled from 73 associations with 7,325 members. Of these 443 or 6.0 per cent were idle at the end of the month in contrast with 7.4 per cent in March. There was a nominal reduction in employment from April last year, however, when 5.6 per cent of the members reported were without work.

In the miscellaneous group of trades practically no change in the unemployment percentage was shown during April from either the previous month or April of last year according to the reports received from 112 local unions with a total of 4,159 members. Of these,

867 or 20.8 per cent were idle on the last day of the month contrasted with percentages of 20.9 in March and 20.8 in April, 1932. Fluctuations occurred, however, in the various groups, unclassified workers showing moderate increases in available work from March, with gains of lesser magnitude among hotel and restaurant, and theatre and stage employees, and barbers. Activity for stationary engineers and firemen, however, eased up very slightly during April. An adverse employment movement was noted by theatre and stage, and hotel and restaurant employees from April of last year, the recessions being noteworthy, while among stationary engineers and firemen, unclassified workers and barbers a more favourable situation prevailed.

Fishermen were more busily engaged during April than in the previous month, the 2 unions making returns with 750 members showing an unemployment percentage of 2.0 in contrast with 6.8 per cent in March. In April a year ago all members were reported at work.

Reports from 4 unions of lumber workers and loggers during April with a total of 662 members indicated 34.3 per cent of idleness in contrast with 35.8 per cent in March. Unemployment was, however, in greater prevalence than in April, 1932, when 26.1 per cent of the members reported were without work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1932 inclusive, and also the percentage of unemployment by provinces for April of each year from 1919 to 1930 inclusive, and for each month from January, 1931 to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for April, 1933

The volume of business transacted by Offices of the Employment Service of Canada during April, 1933, as indicated by the average daily placements effected, showed a gain of 27 per cent when compared with that of the preceding month, while a loss of nearly 22 per cent was recorded from April, 1932. All groups, except trade, logging and manufacturing, showed improvement over March, the highest gains being in farming and services and the losses reported in the three groups above-mentioned not heavy. The decrease from April a year ago was almost entirely due to fewer placements in construction and maintenance, but was also augmented by declines of lesser magnitude in

services, manufacturing, trade and transportation, minor gains only being reported in logging, farming and mining.

The accompanying chart shows the trend of employment from January, 1931, to date, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for employment registered at the Offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications rose about 3 points during the first half of the month, but followed a downward trend during the latter half of the period under review, the levels attained at

the end of April being about 10 points lower than those indicated at the close of the corresponding month of last year. The ratios of vacancies to each 100 applications were 52.6 and 51.1 during the first and second half of April, respectively, in contrast with ratios of 59.6 and 61.3 during the corresponding periods of 1932. The ratios of placements to each 100 applications during the periods under review were 49.8 and 48.7, as compared with 57.7 and 59.0 during April, 1932.

The average number of vacancies reported daily by employers to Offices of the Service throughout Canada was 1,072, as compared

During the month of April, 1933, Offices of the Service referred 24,965 persons to vacancies and effected a total of 23,415 placements. Of these, the placements in regular employment were 12,946, of which 9,518 were of men and 3,428 of women, while placements in casual work totalled 10,469. The number of vacancies reported by employers was 17,453 for men and 7,199 for women, a total of 24,652, while applications for work numbered 47,566, of which 36,674 were from men and 10,892 from women.

The following table gives the placements effected by the Offices of the Employment

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

with 838 in the previous month and with 1,345 in April, 1932.

The average number of applications for employment received daily by the Offices during the month under review was 2,069, as compared with 1,724 in March and with 2,225 in April last year.

The average number of placements made daily by the Offices of the Service during April, 1933, was 1,019, of which 563 were in regular employment and 456 in work of one week's duration or less, as compared with a total daily average of 801 during the preceding month. Placements in April last year averaged 1,298 daily, consisting of 464 placements in regular and 834 in casual employment.

Service of Canada, each year, from January, 1923, to date:—

| Year                 | Placements |         |         |
|----------------------|------------|---------|---------|
|                      | Regular    | Casual  | Total   |
| 1923.....            | 347,165    | 115,387 | 462,552 |
| 1924.....            | 247,425    | 118,707 | 366,132 |

\* 105 Placements effected by offices since closed.

of nearly 11 per cent in comparison with the preceding month, but a decline of over 2 per cent when compared with the corresponding month of last year. There was a gain of over 11 per cent in placements when compared with March and the same number of placements were made as during April of last year. Although placements for the province as a whole were the same as in April, 1933, construction and maintenance showed a considerable gain which was, however, offset by losses in other groups, of which the largest was in services. Few placements were made other than in construction and maintenance and services, there being 344 in the former and 375 in the latter. Of the placements in service, 234 were of household workers. During the month 65 men and 57 women were placed in regular employment.

#### NEW BRUNSWICK

Opportunities for employment, as indicated by orders received at Employment offices in New Brunswick during April, were slightly less than in the preceding month, but nearly 24 per cent below the corresponding month last year. There was a gain of 1 per cent in placements when compared with March, but a loss of over 22 per cent in comparison with April, 1932. The largest decline in placements from April of last year was in services, with smaller losses in construction and maintenance and manufacturing. Other changes were nominal only. Placements were almost entirely confined to construction and maintenance and services, there being 56 in the former and 444 in the latter. Of the placements in the services group 328 were of household workers. Regular employment was found for 33 men and 47 women.

#### QUEBEC

There was an increase of over 21 per cent in the number of orders received at Employment Offices in the Province of Quebec when compared with the preceding month and of over 41 per cent in comparison with the corresponding month of last year. Placements were nearly 17 per cent higher than in March and nearly 24 per cent above April, 1932. All industrial divisions, except farming, in which a small decline only was reported, contributed to the increase in placements over April of last year, services and construction and maintenance showing the largest gains. Industrial divisions in which most of the placements were effected were: manufacturing, 119; logging, 101; construction and maintenance, 416; trade, 65; and services, 1,359, of which 1,189 were of household workers. There were 748 men and 972 women placed in regular employment during the month.

#### ONTARIO

Employment opportunities, as indicated by orders received by Employment Offices in Ontario during April, were 10 per cent better than in the preceding month, but over 39 per cent less favourable than during the corresponding month of last year. Similar percentages of change were recorded in placements under both comparisons. The large reduction in placements from April, 1932, was due mainly to the curtailment of placements in relief of unemployment on highway construction. Services, manufacturing, trade and farming, however, also showed losses, but a small gain was reported in logging. Placements by industrial divisions included: manufacturing, 307; logging, 178; farming, 746; construction and maintenance, 4,526; trade, 291; and services, 3,543, of which 1,621 were of household workers. Placements in regular employment numbered 3,528 of men and 1,103 of women.

#### MANITOBA

During the month of April, positions offered through Employment Offices in Manitoba were over 5 per cent higher than in the preceding month, but nearly 40 per cent below the corresponding month of last year. There was a gain of nearly 3 per cent in placements when compared with March, but a loss of nearly 40 per cent in comparison with April, 1932. All industrial divisions, except farming, participated in the decrease in placements from April of last year, construction and maintenance and services showing the largest declines. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 21; farming, 960; construction and maintenance, 758; trade, 41; and services, 738, of which 616 were of household workers. There were 1,460 men and 355 women placed in regular employment.

#### SASKATCHEWAN

Employment Offices in Saskatchewan were notified of nearly 20 per cent more vacancies during April than in the preceding month but 15 per cent less than during the corresponding month of last year. Placements were over 24 per cent higher than in March, but over 12 per cent less than in April a year ago. The loss in placements from April, 1932, was mainly due to declines in services and construction and maintenance, with small decreases in manufacturing and transportation. This adverse change was partly offset by an increase in farm placements under the Farm Relief Act. Industrial divisions in which most of the placements were effected during the month were: farming, 1,318; construction and maintenance, 289; trade, 47; and services, 666,

of which 495 were of household workers. Regular employment was found for 1,315 men and 437 women during the month.

#### ALBERTA

The demand for workers, as indicated by orders received by Employment Offices in Alberta during April, was 22 per cent greater than in the preceding month but over 41 per cent less than in the corresponding month of last year. There was a gain of over 20 per cent in placements when compared with March, but a loss of nearly 42 per cent in comparison with April, 1932. A reduction in placements on highway construction from April of last year was mainly responsible for the decline under this comparison, although smaller losses in services and farming contributed to the decrease. A gain was reported in logging. Placements by industrial divisions included: manufacturing, 20; logging, 56; farming, 920; construction and maintenance, 626; trade, 23; and services, 527, of which 393 were of household workers. There were 1,216 men and 319 women placed in regular employment during the month.

#### BRITISH COLUMBIA

During April, orders received at Employment Offices in British Columbia called for over 10 per cent less workers than in the preceding month and nearly 17 per cent less than in the corresponding month of last year. Similar declines were reported in placements under both comparisons. The decrease in placements from April, 1932, was due to fewer workers being sent to highway relief camps, as minor declines in logging, trade, transportation and manufacturing were offset by gains in services and mining. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 18; farming, 86; mining, 25; construction and maintenance, 2,387; trade, 21; and services, 677, of which 325 were of household workers. During the month 1,153 men and 138 women were placed in regular employment.

#### Movement of Labour

During the month of April, 1933, the offices of the Employment Service of Canada made 12,946 placements in regular employment, 6,623 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 172 were granted the Employment Service reduced transportation rate, 152 going to centres within the same province as the despatching office and 20 to other provinces. The reduced transportation rate which is 2.7 cents per mile

with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment, for which no workers are available locally.

Of the 59 persons who received transportation certificates at Ontario offices during April, 55 were destined to provincial centres and 4 to points outside the province. Provincially, the Port Arthur office granted certificates to 4 circus operators going to Hamilton and to 24 bush workers and 8 mine labourers travelling to employment within the Port Arthur zone. To Port Arthur, in addition, the Timmins office despatched 4 mine workers. From Hamilton 1 weaver was shipped to Ottawa, from St. Catharines 1 labourer to Fort Frances, and from Ottawa 1 blacksmith to Sudbury. The balance of this provincial movement comprised the transfer of 12 bushmen, 9 proceeding from Fort William, and 3 from Sudbury to centres within their respective zones. The four workers going outside the province were for the Amos zone, and included 2 loggers conveyed from North Bay, 1 lumber scaler from Pembroke, and 1 mine fireman from Timmins. Workers taking advantage of the Employment Service reduced transportation rate in Manitoba during April were 24 in number, of whom 15 travelled to situations within the province and 9 to points in other provinces. Within the province the Winnipeg office transferred 1 farm housekeeper to Brandon and 9 farm hands, 1 farm domestic, 1 cook, 1 mine labourer and 1 hotel bartender to employment within the Winnipeg zone. From St. Boniface 1 barber was conveyed to Dauphin. The interprovincial movement originated entirely at Winnipeg from which centre 2 bush workers and 1 boat builder went to Port Arthur and 4 farm hands and 2 farm housekeepers to Saskatchewan rural sections. Offices in Saskatchewan granted 4 certificates for reduced transportation during April, all provincial. Of these the Moose Jaw and Regina offices each issued 1 certificate to a teacher going to employment within their respective zones, while the Saskatoon office despatched 2 farm hands within its own zone. Persons receiving reduced rate certificates from offices in Alberta during April were 58 in number, 52 of whom went to provincial situations, and 6 outside the province. The Edmonton office was responsible for the transfer of 43 workers to employment within the province, including 1 farm hand going to Lethbridge, 1 farm housekeeper to Drumheller, and 12 bushmen, 9 farm hands, 3 farm housekeepers, 2 sawmill hands, 4 miners, 5 carpenters, 2 hotel workers, 3 steamship stewards, and 1 engineer to various points within the Edmonton zone. From Calgary 3 farm housekeepers

and 2 farm hands went to Drumheller and 1 farm housekeeper and 3 farm hands within the Calgary zone. The interprovincial movement was from Edmonton, 5 farm hands proceeding from this centre to Saskatoon, and 1 farm hand to Swift Current. British Columbia transfers at the reduced rate in April numbered 27, of which 26 were provincial and 1 interprovincial. The latter was of a farm hand despatched from Vancouver to Edmonton. Provincially the Vancouver office issued certificates to 1 mine cook, 1 fireman, and 1 housemaid travelling to Penticton, and to 13 mine workers, 3 farm hands, 1 farm housekeeper,

1 ranch cook and 1 domestic going to centres within the Vancouver zone. To employment within their respective zones Nelson transferred 2 mine workers and Prince Rupert 1 farm housekeeper. In addition, from Nelson 1 farm hand was shipped to Penticton.

Of the 172 workers who travelled at the Employment Service reduced transportation rate during April, 70 were conveyed by the Canadian National Railways, 77 by the Canadian Pacific Railway, 17 by the Pacific Great Eastern Railway, 7 by the Temiskaming and Northern Ontario Railway, and 1 by the Northern Alberta Railway.

#### (4) Building Permits Issued in Canada in March, 1933

The Dominion Bureau of Statistics tabulated returns from 61 cities which granted building permits valued at \$1,551,693 during April, as compared with \$934,555 in the preceding month, and \$4,370,863 in the same month of last year. There was, therefore, an increase of \$617,138 or 66.0 per cent in the first comparison, but a decrease of \$2,819,170, or 64.5 per cent as compared with April, 1932. In considering these figures, it should be noted that the wholesale costs of building

materials have this year averaged much lower than in any of the past thirteen years.

Some 50 cities furnished detailed statistics, showing that they had issued some 200 permits for dwellings valued at over \$480,000 and for more than 1,500 other buildings estimated to cost nearly \$950,000. In addition, Brantford reported an engineering project valued at approximately \$5,000. In March, authority was given for the erection of about 115 dwellings and 950 other buildings, valued

at approximately \$245,000 and \$580,000, respectively, while two engineering projects valued at approximately \$7,500 were also reported.

New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia recorded increases in the value of the building permits issued during April as compared with March, 1933, the greatest gain of \$284,773 taking place in Ontario.

As compared with April, 1932, there were decreases in all provinces, that of \$1,289,501 or 65.8 per cent in Ontario being most pronounced.

Each of the four larger cities—Montreal, Toronto, Winnipeg and Vancouver—registered increases in the building authorized during April as compared with the preceding month, but declines as compared with April, 1932. Of the smaller centres, Fredericton, Owen Sound, Peterborough, Stratford, Woodstock, Brandon, Nanaimo and New Westminster reported increases in the value of the building represented by the permits issued, as compared with March, 1933, and April, 1932.

*Cumulative Record for First Four Months, 1920-1933.*—The following table gives the value of the building authorized by 61 cities during April and in the first four months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first four

months of the same years are also given (1926 = 100).

| Year      | Value of permits issued in April | Value of permits issued in first four months | Indexes of value of permits issued in first four months (1926=100) | Average indexes of wholesale prices of building materials in first four months (1926 average = 100) |

| 1921..... | 13,500,360                       | 27,069,872                                   | 65.2   | 136.9   |
| 1920..... | 15,648,915                       | 34,558,901                                   | 83.2   | 143.1   |

The aggregate for the first four months of this year was lower than in the same period in any of the years since 1920; the average index number of wholesale prices of building materials, however, was also decidedly lower than in any other year of the record, being 47.5 per cent less than in the months January-April in 1920, when prices were at their maximum.

Table 1 gives the value of the building permits issued by 61 cities during April and March, 1933, and April, 1932. The 35 cities for which records are available since 1910 are marked by asterisks.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

**T**HE British *Ministry of Labour Gazette*, May, 1933, summarized the employment situation as follows:—

Employment at April 24, 1933, showed a further improvement. There was again a substantial improvement in the building, distributive and clothing industries. Employment also continued to improve in public works contracting, brick, tile and cement manufacture, stone quarrying, hotel, boarding house and laundry services, in engineering, ironfounding, shipbuilding and ship-repairing, and in the vehicle, furniture, woodworking, and food and drink industries. There was also an improvement in the transport services and in electric cable and apparatus manufacture.

On the other hand there was a decline in coal mining, in the cotton, linen, jute and hosiery industries, in textile bleaching, dyeing and finishing, and in the iron and steel, tinplate, and pottery industries.

The improvement in employment, which was experienced in all parts of the country except Wales, was most marked in the South of England. In London and the South-Eastern Counties employment continued moderate; in South-West England and the Midlands it was slack; while in all other areas it was still bad.

Among the workpeople, numbering approximately 12,808,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at April 24, 1933 (including those temporarily stopped as well as those wholly unemployed), was 21.4, as compared with 22.0 at March 20, 1933, and with 21.4 at April 25, 1932. The percentage wholly unemployed at April 24, 1933, was 17.2, as compared with 18.0 at March 20, 1933, while the percentage temporarily stopped was 4.2, as compared with 4.0. For males alone, the percentage at April 24, 1933, was

24.4, and for females, 13.3; at March 20, 1933, the corresponding percentages were 25.1 and 13.8.

At April 24, 1933, the number of persons on the Registers of Employment Exchanges in Great Britain was 2,070,814 wholly unemployed, 527,418 temporarily stopped, and 99,402 normally in casual employment, making a total of 2,697,634. This was 78,550 less than a month before, but 45,453 more than a year before. The total included 2,169,128 men, 68,858 boys, 405,700 women and 53,948 girls.

The persons on the Registers included 1,166,442 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years; (b) had received less than 156 days' benefit in their current benefit years; and (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 1,147,534 insured persons with applications for transitional payments; 237,640 insured persons not in receipt of insurance benefit or transitional payments, and 146,018 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at April 24, 1933, was 2,770,980.

### United States

The Bureau of Labour Statistics of the United States Department of Labour tabulate monthly statistics of employment and payrolls based on reports from establishments in 17 major industrial groups. According to the Bureau's statistics, the April, 1933, index of employment for all manufacturing industries combined is 56.0 and the April index of payrolls is 34.9. A comparison of the April employment index with the March, 1933, employment index (55.1) shows an increase of 1.6 per cent in employment over the month interval while a similar comparison of the April payroll index with the March payroll index (33.4) denotes a gain of 4.5 per cent in payrolls from March to April. Comparing the April, 1933, index of employment with the index of employment in April, 1932 (62.2), it is seen that employment has declined 10 per cent over the year interval, while a comparison of the April, 1933, payroll index with the April, 1932, payroll index (39.9) shows a decline in payrolls of 21.9 per cent.

The changes in employment and payrolls in April, 1933, are based on reports supplied by 17,954 establishments in 89 of the principal manufacturing industries of the United States. These establishments reported 2,516,266 employees on their payrolls during the pay period

ending nearest April 15, whose combined weekly earnings were \$41,068,232. The employment reports received from these co-operating establishments cover approximately 50 per cent of the total number of wage earners in all manufacturing industries of the country.

The increases in both employment and payrolls from March to April, 1933, are due primarily to a partial recovery from the severe drop that occurred between February and March, because of the bank holiday, as reported last month.

*Non-Manufacturing Industries.*—Increases in employment in April, as compared with March, were reported in 8 of the 16 non-manufacturing industries covered by the Bureau's monthly employment survey, and increased payroll totals were reported in 6 of these non-manufacturing industries. The changes, for the most part, follow the usual seasonal trends.

The most pronounced gains in both employment and payrolls over the month interval were seasonal increases of 48.2 per cent in employment and 38.3 per cent in payrolls in the canning and preserving industry. The dyeing and cleaning industry reported gains in employment and earnings of 13.8 per cent and 33.1 per cent, respectively, and the quarrying and non-metallic mining industry reported increases of 11.8 per cent in employment and 13.8 per cent in payrolls. Retail trade establishments, reflecting the expansion for Easter trade, reported 10.1 per cent more employees in April than in March with a corresponding increase of 9.6 per cent in payrolls. Employment in the building construction industry was also 10.1 per cent above the level of the preceding month and payroll totals showed a gain of 8.0 per cent from March to April. The increases in employment in the remaining 3 industries (laundries, crude petroleum, and wholesale trade) were small. The coal mining industries reported the most pronounced losses over the month interval, the bituminous coal mining industry reporting decreases of 5.8 per cent in employment and 13.6 per cent in earnings, and the anthracite mining industry reporting losses of 5.4 per cent in employment and 23.4 per cent in payrolls. The metalliferous mining industry reported 2.2 per cent fewer employees in April than in the preceding month, and the telephone and telegraph industry reported a drop of 1.2 per cent in number of workers over the month interval. The decreases in employment in the hotel, electric railroad, banks-brokerage-insurance-real estate, and power and light industries were 0.8 per cent or less.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

### Post Office Department

Following is a statement of payments made in May, 1933, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

| Nature of Orders   | Amount    |
|--|-----------|
| <i>Making Metal Dating Stamps and Type, Brass Crown Seals, Cancellors, etc.—</i> |           |
| Pritchard-Andrews Co. of Ottawa, Ltd. . . . .                                    | \$ 493 75 |
| <i>Making and Repairing Rubber Stamps, Dater, etc.—</i>                          |           |
| Pritchard-Andrews Co. of Ottawa, Ltd. . . . .                                    | 204 85    |

| Nature of Orders                                       | Amount   |
|--|----------|
| <i>Making and Supplying Letter Carriers' Uniforms—</i> |          |
| Grant-Holden-Graham Limited, Ottawa, Ont. . . . .      | 493 73   |
| Miner Rubber Company, Granby, P.Q. . . . .             | 1,172 86 |
| Canadian Panama Co., Toronto, Ont. . . . .             | 848 85   |
| Kaufman Rubber Co., Kitchener, Ont. . . . .            | 2,062 53 |

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Food, Drink and Tobacco

CALGARY, EDMONTON AND LETHBRIDGE, ALBERTA.  
—THE BREWERIES OF ALBERTA AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCALS NOS. 124 (CALGARY), 314 (EDMONTON), AND 354 (LETHBRIDGE).

Agreement to be in effect from April 1, 1933, to March 31, 1934. Notice of any desired change to be given before expiration and negotiating committee to meet before expiration date.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, August, 1932, page 922, August, 1930, page 968, and December, 1928, page 1375.

Wages, hours and all other conditions are the same as in effect since April 1, 1932.

VANCOUVER AND VICTORIA, B.C.—CERTAIN BREWERIES AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCALS NOS. 300 (VANCOUVER) AND NO. 280 (VICTORIA).

The agreement, which was noted in the LABOUR GAZETTE, August, 1932, page 922, December, 1931, page 1354, and August, 1929, page 924, is continued in effect without change until further notice in Victoria and until December 31, 1934, in Vancouver.

### Manufacturing: Pulp, Paper and Paper Products

WINNIPEG, MANITOBA.—PUBLISHERS OF TWO DAILY NEWSPAPERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 191.

Agreement to be in effect from May 1, 1933, to October 31, 1933.

This agreement is similar to the one summarized in the LABOUR GAZETTE, September, 1932, page 1019 and July, 1931, page 833, with the following exception:

Wages for journeymen \$40 per week for day work and \$42 per week for night work (reductions of \$3 per week in each case from the previous rates).

WINNIPEG, MANITOBA.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 191.

Agreement to be in effect from April 17, 1933, to March 31, 1934.

The agreement which was summarized in the LABOUR GAZETTE, September, 1930, page 1090, continued in effect until this year. The new agreement is similar to it with the following exceptions:

Wages for job compositors, composing machine operators and proofreaders: 80 cents per hour for day work and 94 cents per hour for night work (reductions of 10 cents per hour from the previous rates).

Wages for union members learning to operate machines: from \$12.50 per week for day work and \$16 per week for night work in first three weeks to \$22.50 per week for day work and \$26 for night work during the fifth three weeks (reductions of \$2.50 per week in some cases and \$2.75 in other cases from previous rates).

REGINA, SASK.—CERTAIN NEWSPAPER AND JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 657.

Agreement to be in effect from May 1, 1933, to April 30, 1934.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, July, 1932, page 818, July, 1929, page 804, and July, 1928, page 785, with the following exceptions:

#### *Newspaper Offices*

Wages for stonemen, admen, make-upmen, bankmen, foremen, machine operators, machinists and copy preparers: 78 cents per hour for day work (a reduction of 12 cents per hour from the previous rate). For night work \$3 per week extra, as before. Hours are unchanged at 48 per week for day work and 45 for night work.

Apprentices to be paid the same percentages of journeymen's rate as before, but those on night shift to be paid \$2 per week extra instead of \$3 extra as formerly paid.

#### *Job Printing Offices*

Wages for stonemen, admen, make-upmen, bankmen, foremen, machine operators, machinists and copy preparers: 78 cents per hour for day work (a reduction of 12 cents per hour from the previous rate). For night work \$3 per week extra, as before. Hours are unchanged at 44 per week for day work and 42 for night work.

Apprentices to be paid the same percentages of journeymen's rate as before, but those on night shift to be paid only \$2 per week extra, instead of \$3 extra as formerly paid.

EDMONTON, ALBERTA.—TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS' UNION, LOCAL NO. 129.

Agreement to be in effect from May 27, 1933, to May 26, 1934. Negotiations for renewal or a new agreement may be opened 30 days before expiration date. If negotiations fail, the matter to be referred to arbitration.

Only union members to be employed, if available. If sufficient members are not available, those employed will work overtime at regular rates, or others not union members may be temporarily employed.

Hours: regular hours to be fixed by the foreman, not to exceed 8 hours per day or night: 45 hours per week.

Overtime: time and one-half except in case of accident or other cause beyond the control of employer, when overtime will be at regular rate. \$1 extra when called back to work without previous notice. Sunday work except on regular shift, double time. Work on six named holidays, time and one-half; work on Christmas Day, double time.

Wages for journeymen stereotypers: 85 cents per hour (a reduction of 11 cents per hour

from the previous rate). Night work \$2.40 per week over day scale. Foremen to be paid \$5 per week over journeymen's rate. A substitute journeyman working 5 hours or over on any day to be paid for full day.

No apprentice to be allowed unless two journeymen are regularly employed and apprentices are not to change their positions without the consent of the union.

Wages for apprentices: \$10 per week for first year, 33 $\frac{1}{3}$  per cent of journeymen's scale during second year, 40 per cent during third year, 55 per cent during fourth year and 65 per cent during fifth year.

No strike or lockout to occur during arbitration proceedings. All disputes to be referred to a joint arbitration board, whose decision will be final and binding.

#### **Construction: Buildings and Structures**

OTTAWA.—OTTAWA MASTER SHEET METAL WORKERS' ASSOCIATION AND THE SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL NO. 47.

Agreement to be in effect from May 1, 1933, to April 30, 1934, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, June, 1932, page 717, and September, 1929, page 1052, with the following exceptions:

Hours: 40 per week with a five day week, but any necessary work on Saturday morning to be done at the regular rate. (The hours previously were 44 per week.)

Wages for journeymen sheet metal workers 75 cents per hour (a reduction of 15 cents per hour). Wages for advanced apprentices (formerly called junior journeymen): 50 cents (a reduction of 15 cents per hour).

After serving four years' apprenticeship and if satisfactory to employers and the union, an apprentice will become a journeyman or be classified as an advanced apprentice.

EDMONTON, ALBERTA.—EDMONTON SOCIETY OF DOMESTIC, SANITARY AND HEATING ENGINEERS, INCORPORATED, AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAM-FITTERS, LOCAL NO. 44.

The agreement which came into effect May 20, 1932, and was summarized in the LABOUR GAZETTE, August, 1932, page 923, August, 1931, page 934, September, 1928, page 1014, and July, 1927, page 792, has been renewed without change for the year ending April 30, 1934.

Wages for plumbers and steamfitters are unchanged at \$1.05 per hour, with a 44-hour week.

#### **Transportation and Public Utilities: Water Transportation**

MONTREAL, QUEBEC.—THE HARBOUR COMMISSIONERS OF MONTREAL AND THE INDEPENDENT ASSOCIATION OF HARBOUR EMPLOYEES OF THE PORT OF MONTREAL.

Agreement to be in effect from May 1, 1933, to April 30, 1934.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September, 1932, page 1020, June, 1931, page 712, July, 1929, page 807, September, 1927, page 1004, with the following exception:

All wage rates included in the agreement are reduced approximately 10 per cent.

# CENSUS OF RETAIL AND WHOLESALE TRADE IN CANADA, 1930

THE Dominion Bureau of Statistics has issued preliminary reports giving summary tables of the figures as to Census of Merchandising and Service Establishments in Canada in 1930 secured in connection with the decennial Census of 1931.

One report is entitled "Retail Trade in Canada, 1930," and the information has been divided into two main fields, merchandising and services, the former covering stores and the latter dealing with establishments such as billiard halls, bowling alleys, motion picture houses, baggage transfer and cartage, undertaking and burial, cleaners and dyers, fur repairing, barber shops, shoe shine parlours, garages, shoe repair shops, taxis, motor freight,

etc. Some establishments, garages, tire shops, beauty parlours, etc., come under both lines of activity and these are classified on the basis of their major activity.

Reports have previously been issued on retail trade for each province and for some of the principal cities.

The report on wholesale trade includes in addition to data on wholesalers proper, that on brokers, chain store warehouses, co-operative marketing and buying associations, elevators, exporters, manufacturers' agents and sales branches.

The accompanying tables have been compiled from the published figures so as to show the figures for the principal lines of activity, including numbers of employees, salaries and wages paid.

Separate reports are being issued on hotel operation, and supplementary reports will be issued containing special analyses of certain lines of retail and wholesale trade, such as chain stores, trade in certain commodities, etc.

## RETAIL TRADE IN CANADA BY PROVINCES, 1930

| Province                             | Number of establishments | Sales or receipts | Per cent of total sales or receipts |
|--------------------------------------|--------------------------|-------------------|-------------------------------------|
|                                      |                          | \$                |                                     |

(g) Garages and automobile accessory repair shops, blacksmith shops, harness shops, boot and shoe repairs, etc. (h) Taxi, livery, bus and stage line, motor freight, trucking of farm produce, etc.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, MAY, 1933

### Cost of Living, Prices of Staple Articles and Index Numbers

THE cost of the weekly family budget in terms of retail prices was somewhat lower due to a decline in rent, while the Dominion Bureau of Statistics index number of wholesale prices advanced due mainly to higher prices for grains, milled products, hides, raw cotton, raw wool, and non-ferrous metals.

In retail prices the cost per week of a list of twenty-nine staple foods in terms of the average retail prices in sixty-nine cities was \$3.86 for May as compared with \$6.83 for April; \$6.90 for May, 1932; \$8.54 for May, 1931; \$11.17 for May, 1930; \$11.29 for May, 1926; \$10.22 for May, 1922; \$16.92 for June, 1920 (the peak); and \$7.43 for May, 1914. The most important advances occurred in the prices of beef, mutton, pork, bacon, lard, sugar and potatoes, while the prices of eggs, milk and butter were seasonally lower. Including the cost of fuel and rent with that of foods the total budget was somewhat lower at \$15.58 for May as compared with \$15.74 for April. Comparative figures for earlier dates are \$16.45 for May, 1932; \$18.82 for May, 1931; \$21.49 for May, 1930; \$21.54 for May, 1926; \$26.92 for July, 1920 (the peak); and \$14.21 for May, 1914. Fuel was slightly lower due to decreases in the prices of anthracite coal and wood in some localities. Rent averaged lower because of declines reported from several cities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, advanced considerably being 66.9 for May as compared with 65.4 for April. Figures for certain other dates are, 67.4 for May, 1932; 72.5 for May, 1931; 89.7 for May, 1930, 100.2 for May, 1926; 164.3 for May, 1920 (the peak); and 64.2 for May, 1914. One hundred and forty-nine prices quotations were higher, sixty-four were lower and two hundred and eighty-nine were unchanged.

In the classification according to chief component materials four of the eight main groups advanced, three were lower and one was unchanged. The groups which advanced were: the Vegetables and Vegetable Products group, due to higher prices for grains, flour and rolled oats which more than offset lower prices for bran, shorts, gluten meal, onions and hay; the Fibres, Textiles and Textile Products group, mainly because of higher prices for raw cotton, raw wool, raw silk, worsted cloth yarn, jute and hessian; the Wood, Wood Products and Paper group, because of advanced quotations for lumber and

shingles which more than offset lower prices for sulphite and ground wood pulp; and the Non-Ferrous Metals and their Products group, because of higher prices for antimony, copper, tin, lead, silver and zinc. The groups which declined were: the Animals and their Products group, because of lower prices for cured meats, butter, lard, eggs and calves, which more than offset advanced quotations for steers, hogs, lambs, hides, leather and fresh meats; the Iron and its Products group, mainly because of lower prices for steel rails, and the Chemicals and Allied Products group, because of lower prices for zinc oxide and carbon black. The Non-Metallic Minerals and their Products group was unchanged, higher prices for asbestos being offset by lower prices for coal and coke.

In the grouping according to purpose both consumers' goods and producers' goods advanced, the former because of higher prices for flour and milled products, fresh meats, sugar and cotton fabrics which more than offset declines in the prices of onions, cured meats, milk and its products, eggs and drugs, and the latter because of higher prices for grains, livestock, non-ferrous metals, textiles and clothing which more than offset lower prices for rolling mill products, sulphur, miscellaneous producers' materials and wood pulp.

In the grouping according to origin raw and partly manufactured goods were substantially higher, because of increased quotations for certain vegetable, animal and forest products. Fully and chiefly manufactured goods advanced slightly, higher prices for vegetable and mineral products more than counterbalancing reduced quotations for certain animal and forest products.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of May of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of

(Continued on page 660)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN  
TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\* Prior to 1926 number of commodities was 236.

(Continued from page 652)

Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six roomed houses of two classes in

districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and

| Jan. 1933....  | 95   | 145                  | 141  | 112           | 161           | 124           |
| Feb. 1933....  | 91   | 145                  | 141  | 112           | 160           | 122           |
| Mar. 1933....  | 91   | 145                  | 141  | 112           | 160           | 122           |
| April 1933.... | 93   | 144                  | 141  | 107           | 160           | 122           |
| May 1933....   | 93   | 143                  | 133  | 107           | 160           | 121           |

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912, in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

## Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to permit the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1921, quarterly from 1922 to 1931, and monthly since January, 1932. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.6; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318) and bringing the figures down to 1932. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3; 1931, 89.6.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1931 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 126.6; 1931, 125.1; natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 159.3; 1929, 159.5; 1930, 158.8; 1931, 157.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

The advance in beef prices continued, sirloin steak averaging 21.6 cents per pound in May as compared with 20.7 cents in April, round steak 17.5 cents per pound in May and 16.7 cents in April, and shoulder roast 11.8 cents per pound in May as compared with 11.3 cents in April. Increases were reported from most localities. Mutton was again substantially higher averaging 21.4 cents per pound as compared with 19.2 cents in April. Both fresh and salt pork advanced, the former

being up from 14.5 cents per pound in April to 15.1 cents in May, and the latter from 14.3 cents per pound to 14.6 cents. Sliced breakfast bacon was 1 cent per pound higher at 22.9 cents. The price of lard was fractionally higher at 12.8 cents per pound.

The price of eggs showed a substantial seasonal fall, fresh being down from an average price of 22.9 cents per dozen in April to 19.2 cents in May and cooking from 18.1 cents per dozen to 15.4 cents. The price of milk averaged 9.1 cents per quart in May as compared with 9.3 cents the previous month. Lower quotations were reported from Quebec, St. Hyacinthe, Cobalt, Edmonton and Trail. Both dairy and creamery butter were lower in most localities, the former averaging 24 cents per pound as compared with 24.9 cents in April and the latter averaging 27 cents per pound as compared with 28.8 cents. Cheese was fractionally higher at 19.8 cents per pound.

Bread was unchanged at an average price of 5.5 cents per pound. Flour was fractionally higher at 2.7 cents per pound as compared with 2.6 cents in April. The price of potatoes averaged 95 cents per ninety pounds in May as compared with 92 cents in April. The price in May, 1932, was 65 cents per ninety pounds. Granulated sugar was again somewhat higher at an average of 7.8 cents per pound as compared with 7.4 cents in April and 5.6 cents in March. Anthracite coal was 4 cents per ton lower at \$15.29, decreases being reported from Halifax and Peterborough. A substantial decline in rent was reported from several localities.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices were generally higher. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaged 63.3 cents per bushel as compared with 53.6 cents in April. The high price for the month was 65½ cents per bushel on May 12th and again on May 30th and the low 59.3 cents on the 1st. The unfavourable crop prospects in the United States together with the movement toward inflation were said to be factors in the advance in price. In coarse grains flax advanced from 84.1 cents per bushel in April to \$1.10 in

May, rye from 37.7 cents per bushel to 44.9 cents, western oats from 24.7 cents per bushel to 28.3 cents and western barley from 31.3 cents per bushel to 36.1 cents. Flour at Montreal advanced from \$4.70 per barrel to \$5.40, rolled oats at Toronto from \$2.45 per ninety pound sack to \$2.70, while bran at Montreal declined from \$18.79 per ton to \$18.17. Raw sugar at New York advanced from \$1.26 per cwt. (Canadian funds) to \$1.49, while granulated at Montreal was up from \$6.18 per cwt. to \$6.37. Ceylon rubber at New York again advanced being up from a price of 4.2 cents per pound in April to 5.7 cents in May (Canadian funds). In live stock choice steers at Toronto rose from \$4.80 per hundred pounds to \$5.06 and at Winnipeg from \$3.78 per hundred pounds to \$4.32. Veal calves at Toronto declined from \$6.09 per hundred pounds to \$5.74 but advanced at Winnipeg from \$5.01 per hundred pounds to \$5.14. Bacon hogs at Toronto advanced from \$5.55 per hundred pounds to \$5.71 and at Montreal from \$5.87 to \$6.09. This same grade at Winnipeg was 24 cents per hundred pounds higher at \$5.22. Lambs at Toronto rose from \$7.82 per hundred pounds to \$10.63 and at

Montreal from \$6.37 per hundred pounds to \$12.21. The price at Winnipeg was up from \$6.81 per hundred pounds to \$7.93. Creamery butter at Montreal declined from 27.3 cents per pound to 22.3 cents. Fresh eggs at Montreal were 1 cent per dozen lower at 19.5 cents. At Winnipeg the same grade was practically unchanged at 14.6 cents per dozen. Raw cotton at New York averaged 9.9 cents per pound in May in Canadian funds as compared with 8.3 cents in April. Raw silk at New York was also higher at \$1.89 per pound as compared with \$1.69 the previous month. The price of raw wool was substantially higher at prices ranging from 11.5 to 13 cents per pound as compared with a range of 9 to 10½ cents in April. In lumber spruce scantling advanced \$1 per thousand board feet to \$10. Common fir timber was also \$1 higher at \$13 per thousand board feet. Steel rails declined from \$47 per ton to \$45. In non-ferrous metals electrolytic copper rose from \$7.62 per hundred pounds to \$8.93, copper wire bars from \$6.42 per hundred pounds to \$8.01, tin from 34.3 cents per pound to 44.5 cents and silver from 36 cents per ounce to 38.9 cents.

### “Silicosis in the Foundry”

In a pamphlet entitled “Silicosis in the Foundry,” Dr. C. P. McCord, director of the Industrial Health Conservancy Laboratories at Cincinnati, Ohio, discusses the characteristics of this disease, its control, and the question of compensation for the workers exposed to the risk. The writer summarizes the results of his study as follows:—

Silicosis is a genuine and direful occupational disease, threatening many industries utilizing silica in one or more of its many forms. In foundry work, in the absence of protective measures, silicosis may arise in any department, but chiefly it is limited to the three departments designated as ‘Casting cleaning’—‘Sand conditioning’—and ‘Shake-out work.’ In the early future, more rather than fewer cases of silicosis may be expected in many industries, including the foundries.

Prevention of silicosis in the foundry is practical, and not especially difficult or expensive. The primary requirements for prevention are—(a) Short periods of services of workmen in casting cleaning, and other highly dusty operations; (b) Sustained and painstaking housekeeping, to the end that the quantity of dust in the foundry may be reduced; (c) The use of positive pressure hose masks at dusty work points; (d) Careful physical examination of applicants and employees, including X-ray examination; (e)

Use of dust-tight blasting machinery; (f) Substitution of steel or synthetic abrasives for sand, or other methods of casting cleaning, wherever practical to do so; (g) Entrainment of all possible dusts at their point of origin.

Since no treatment of silicosis is known to be efficacious, extra incentives for prevention exist. Apart from human considerations the extraordinarily high cost per case for silicosis (which cases nearly all terminate fatally) makes preventive measures highly desirable, economical, and in fact a necessity. The average cost per case of silicosis approximates \$10,000.

Under the Women’s Minimum Wage Act of British Columbia public meetings are being held throughout the Province, commencing on June 12, for the reconsideration of the Orders of the Minimum Wage Board relating to wages, hours of labour, and conditions of employment in the following occupations and industries, namely: mercantile, manufacturing, office, telephone and telegraph, fruit and vegetable, public housekeeping, laundry and cleaning, personal service, and fishing. Written statements from employers and employees relevant to wages, hours, conditions of employment, cost of living, and other matters vital to the question are specially welcomed by the Board.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the April LABOUR GAZETTE.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1924=100, was 58.5 for April, a decline of 0.5 per cent from the March level. Food was 1.2 per cent lower due chiefly to reductions in the prices of milk, eggs, butter and Australian frozen beef. Non-foods were 0.1 per cent lower.

The *Statist* index number, on the base 1867-1877=100, was 78.5 for April, an advance of 1.9 per cent over the March level. Of the six groups, five were higher, the greatest increases occurring in minerals and textiles.

**COST OF LIVING.**—The index number of the cost of living of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 136 at May 1, a decline of 0.7 per cent for the month due to reductions in food prices and in the heat and light group.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Office, on the base 1914=100 (gold basis), was 78 for April, showing no change from the March level. Foods were lower due entirely to a substantial decline in animal foods. Non-foods were higher due to advances in minerals and metals and in textiles.

### Germany

**WHOLESALE PRICES.**—The Federal Statistical Office index number, on the base 1913=100, was 90.7 for April, a decline of 0.4 per cent for the month. The groups to show the greatest changes from March were rubber with an advance of 10.2 per cent and non-ferrous metals with an advance of 3.6 per cent.

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 116.6 for April, showing no change from the March level. Slight declines in heat and light, clothing and sundries were offset by a small advance in food prices, while rent was unchanged.

### Italy

**WHOLESALE PRICES.**—The index number of the Provincial Economic Council, Milan, on the base 1913=100 (pre-war currency), was 79.8 for February, a decline of 1.4 per cent from the previous month. With the exception of a small advance in minerals and metals, all groups were lower than for January.

**COST OF LIVING.**—The index number of the cost of living, Milan, on the base June, 1927=100, was 77.88 for March, a decline of 1.3 per cent for the month due to a reduction in food prices.

### United States

The sharp advances noted below between the index numbers for the month of April and for the month of May follow the suspension of the gold standard in the United States on April 19, 1933.

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 60.4 for April, an increase of 0.3 per cent over the March level. Increases were noted in farm products, foods, hides and leather products, textile products and chemicals and drugs, while decreases were recorded in fuel and lighting materials, metals and metal products, building materials, house furnishing goods and miscellaneous commodities.

The *Annalist* index number, on the base 1913=100, was 90.5 for May, an advance of 8 per cent over the April level. Increases were recorded in all groups except fuel, which was considerably lower.

*Bradstreet's* index number, which is the sum totals of the prices per pound of 96 commodities of common consumption was \$6.9845 at May 1, an advance of 6.9 per cent for the month. All groups were higher except coal and coke, oils and building materials which showed decreases.

*Dun's* index number, which is based on the estimated cost *per capita* of a year's supply of commodities in wholesale markets, was \$133.488 at May 1, an advance of 4.15 per cent over the previous month due to increases in breadstuffs, dairy and garden produce, "other food" and clothing, while meat, metals and miscellaneous commodities were lower.

**COST OF LIVING.**—The index number of the Department of Labour and Industries, Massachusetts, on the base 1913=100, was 118.9 for April, which is slightly higher than the March index number due to increases in the food and clothing sections, partly offset by a decrease in the fuel and light section.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Liability of Owner for Safe Condition of Elevator Shaft

A number of workmen were engaged to clean up the debris in the fifth floor of a building, which had been leased by the defendant company, with instructions to take the debris down an elevator and remove it to an incinerator. One of the men, the plaintiff in this case, while he was at work on the fifth floor, fell down the elevator shaft, which was without guards, and sustained serious injuries. He brought an action against the lessees of the fifth floor, and also the owners of the building. The case was tried by Mr. Justice Wright and a jury, who held Greisman, the owner of the building, liable to the plaintiff, but dismissed the action in respect to the other defendants. The jury found that the interlocking safety device in the elevator was in a defective condition, due to the owner's negligence, but that the plaintiff had been guilty of contributory negligence in having failed to look before he stepped, as he supposed, on the elevator hoist floor. The jury assessed the plaintiff damages at \$9,840.75, 10 per cent to be apportioned to the plaintiff and 90 per cent to the owner.

Mr. Justice Wright, in giving judgment accordingly, pointed out that whether the plaintiff was an invitee or a licensee was immaterial because an owner is under a duty even towards a licensee not to create a trap which is known or ought to be known to the owner.

On appeal by Greisman the Ontario Court of Appeal dismissed the appeal, subject to certain variations in the judgment.

Chief Justice Latchford, after reviewing the circumstances, referred to the decision of the English Court of Appeal in *Sutcliffe versus Clients' Investment Co.* (1924), which he regarded as analogous. In that case the person injured was a licensee with an interest and therefore in the position of an invitee and the Court's enquiry was directed to the question whether the owner ought to have known of the defect in the balcony where the accident occurred. In this case, the Chief Justice continued, the elevators were in the possession and control of Greisman. If Gillingham (the plaintiff) was a licensee with an interest and hence in the position of an invitee, as the Chief Justice inclined to think he was, the reasons for judgment in the *Sutcliffe* case applied and because of the finding of the jury the defendant Greisman was liable to the plaintiff. "Mere contributory negligence is not now in this province a bar to the right of a

plaintiff to recover damages, and the extent of Gillingham's contributory negligence has been determined by the jury, and allowed for by the trial Judge." Subject to the reduction of the damages by \$500 to cover a miscalculation in the quantum as to the plaintiff's wages and the deletion from the judgment of the paragraph that Greisman should pay to the plaintiff the costs payable by him to the owners of the Balfour Building the Chief Justice concluded that the appeal should be dismissed with costs.

*Gillingham versus Shiffer-Hillman Clothing Co. et al.* (Ontario), 1933, *Ontario Weekly Notes*, page 360.

### Offence of Vagrancy not Implied in Refusal to Accept Employment

Under Section 238 (a) of the Criminal Code, the Police Magistrate for Oshawa convicted a man named Fleury on the charge that he, not having any visible means of maintaining himself, lived without employment and was therefore "a loose, idle and disorderly person and a vagrant." Fleury was an inmate of the hostel at Oshawa and later received public relief in the form of food and shelter at that institution. On or about April 4 a superintendent of an employment office under the Provincial Government, being in need of a number of men to go to Trenton in connection with the preparation of a new aviation field, applied to the superintendent of the hostel for the requisite men. They were to receive clothing, food and lodging and twenty cents a working day. Fleury being offered this employment declined to accept it, saying that taking it would prevent his getting a better job and that the pay was not sufficient. Thereupon the charge of vagrancy was laid. Appeal was made against the conviction by way of a stated case.

Mr. Justice Garrow, in the High Court of Justice, quashed the conviction. He said there was nothing in the evidence to indicate in the slightest degree what Fleury's previous circumstances, character or occupation had been. It seemed to be implied in this conviction that any unfortunate receiving relief who declines to accept the first job offered thereby becomes liable to conviction as a vagrant.

"The conviction is clearly bad," he said. "No sympathy is to be extended to idlers willing to live at the public expense, but it is still necessary that in this as in every case of the kind, the charge laid must be made out and proved by the prosecution. Here the accused was being maintained at the

hostel and he still continues to be according to the evidence, exactly as he was before his refusal of the proposed employment, and unless it is to be held that that refusal immediately constituted him a vagrant, then he and all others in like case might be convicted merely upon proof of the fact that they were receiving public support in this manner and are without means. 'The mere fact of living without employment is not an offence against the law if the person . . . is able to do so because he has sufficient means either belonging to himself or which are provided for him in a legitimate way.'" (Reference to judgment of Boyd, C., in *Rex v. Munroe* (1911), 25 O.L.R. 223 at 225.)

"In the same case and on the same page the Chancellor approved of the opinion expressed in *Regina v. Bassett* (1884), 10 P.R. 386, that it is the general trend of his (the accused's) life that is to be looked at, i.e., the sort of character he is exhibiting. The offence lies not in the doing of any of the things mentioned in sub-secs. (a) to (j) of the section in question, but in being a loose, idle or disorderly person or vagrant. (Reference to *Rex v. Jackson* (1917), 40 O.L.R. 173 at 191.)" The learned Justice said that he was quite unable to appreciate how this man who was before his alleged offence and who has been since lawfully maintained in the manner described, can be said to have suddenly at the moment he declined the offer of work thereby acquired the character of a vagrant. There was no evidence to warrant the conviction, which must be quashed.

*Rex versus Fleury* (Ontario), 1933 *Ontario Weekly Notes*, page 390.

#### **Salary to be Paid in Case of Unjustifiable Dismissal**

A baker who was employed for demonstration purposes by a milling company at Montreal, at a salary of \$200 a month, with travelling expenses, was dismissed without notice by his employer. He brought an action for a month's salary in lieu of notice, with travelling expenses of \$21. The employer contended that the dismissal was justified by the fact of the employee's misconduct and insubordination after many warnings; the case hinged on what transpired at a certain convention at Toronto, to which the employee had been invited by his employer to go with other representatives of the company. On that occasion he became intoxicated, and his companions could not restrain him from indiscreet actions; and finally he refused to return with them to Montreal, this refusal

constituting the "insubordination" alleged by the company. In the Superior Court at Montreal, Judge Cousineau allowed the claim, and on appeal by the defendant company this judgment was confirmed by the Court of Appeal.

Mr. Justice Letourneau in the latter Court pointed out that the company had permitted the claimant to attend the convention and had some responsibility for his actions there, and he agreed with the trial judge that there had not been sufficient reason for dismissing him. He viewed the matter as in the nature of a breach of contract; and legal action could be taken in the form of a claim either for damages for dismissal, constituting a breach of contract, or else for the execution of a contract, that is, for the recovery of salary—provided that, in the latter alternative, the period covered by the salary must have expired before claim was made. However, in the present case, the defendant company appeared to regard the claim as a matter merely of salary said to be owing to the claimant as the result of his dismissal.

*Benoit versus Robin Hood Mills, Ltd.* (Quebec), 1933, *Rapports Judiciaires de Québec* (Cour du Banc du Roi) vol. 54, page 387.

#### **Compensation Board to determine Workmen's Right of Action**

While in the employment of the Town of Orillia a workman received serious injuries owing to the negligence of the driver of a truck on which he was riding, the driver being also employed by the town. He took action against the town, but the defendant contended that there was no cause of action.

Mr. Justice Kerwin said that the proper course to follow was that adopted in *Dominion Cannery Ltd. v. Costanza* (LABOUR GAZETTE, June, 1932, page 664) and to direct that the action against the Town be stayed, so as to permit of an application being made to the Workmen's Compensation Board under sec. 14 (2) of the Workmen's Compensation Act for its adjudication and determination as to whether this action, so far as the Town was concerned, was one the right to bring which is taken away by Part 1 of the Workmen's Compensation Act. Upon a certificate of the Board's decision being filed, this application would then be disposed of.

*McNeil versus Town of Orillia et al* (Ontario), 1933, *Ontario Weekly Notes*, page 394.

### Claim of Compensation Board has Priority over that of Mortgagee

The Workmen's Compensation Board of British Columbia seized chattels under execution for the amount of an assessment due to the Board. Mortgagees of the property under a prior mortgage claimed the goods so seized. The Court being asked to determine whether the goods were the property of the Board or of the prior mortgagees, Mr. Justice Howay decided in favour of the mortgagees. The Board then appealed, and the Court of Appeal (British Columbia) allowed the appeal.

Chief Justice Macdonald pointed out that the Board founded its case on section 46 of the Workmen's Compensation Act, which reads as follows:—

"Notwithstanding anything contained in any other Act, the amount due to the Board by an employer upon any assessment made under this Act, or in respect of any amount which the employer is required to pay to the Board under any of its provisions or upon any judgment therefor, shall have priority over all liens, charges, or mortgages of every person, whenever created or to be created, with respect to the property, real, personal, or mixed, used in or in connection with or produced in or by the industry with respect to which the employer was assessed or the amount became payable, excepting liens for wages due to workmen by their employer."

Reference was made in the judgment to the case of *Dinning versus Workmen's Compensation Board* (LABOUR GAZETTE, February, 1932, page 243). In that case it was held that the Board had no lien and were general creditors only, and were therefore not entitled to compete with a prior mortgagee. That, however, the Chief Justice pointed out, was a bankruptcy case in which the funds were in the hands of a trustee for distribution under the Bankruptcy Act. The present case was founded upon facts widely different.

Referring to the provisions of section 46, his Lordship said: "By its terms it gives the debt of the appellant priority over all liens, charges, or mortgages affecting the property in question 'whenever created or to be created' except wages due to workmen, and this notwithstanding any Act to the contrary. If, therefore, the appellant has a charge upon the property seized by the sheriff, section 46 expressly declares that that charge shall have priority over a mortgage whenever created, that is to say, whether prior to subsequent to the mortgage. To put it shortly the appellant's lien takes priority of the respondent's mortgage. The appellants here are seeking to enforce their right by execution, and the mortgagees are seeking to prevent them so doing. No doubt they are owners of the property by reason of their mortgages from

the debtor, but if the appellant has by its execution a lien or charge upon the property, as I think it has, that lien or charge is entitled to priority over the mortgage by reason of the said section. The Legislature can make that the law which formerly was not the law, and may destroy vested rights both at law and in equity if it expresses its intention so to do. Has it done so by section 46? I am satisfied that it has. There can be no question about the meaning of the words used, though I feel that they would destroy to a great extent confidence in securities of those lending money to employers on mortgage securities, notwithstanding that the securities are executed by the debtor and on registration are protected by the Land Registry Act (Revised Statutes of B.C. 1924, ch. 127), but if that is the intent and meaning of the Act, that meaning must prevail in a Court of law and equity. There is, therefore, nothing in the way of appellant in enforcing its lien or charge which in equity and without the assistance of section 46 it would not have, but in view of section 46 it has priority not in the equity of redemption but in the property seized. The Legislature had power to give them the whole property and I think meant to do so as security for their lien.

"Since the lien is considerably less in amount than the probable value of the goods mentioned in the mortgage and seized by the sheriff, I shall direct that the Board shall receive only the full amount of its claim and the balance of the property shall be left to the mortgagees or, if sold, the balance of the money shall be paid to the mortgagees."

*Workmen's Compensation Board versus Pumas Oil and Gas Co. Ltd.* (British Columbia) 1933. *Western Weekly Report*, vol. 2, page 121.

### Trade Agreement may be dissolved by External Circumstances

The decision rendered by Mr. Justice Logie in the case of *Ziger et al versus Shiffer and Hillman Company, Limited*, was noted in the LABOUR GAZETTE, December, 1932, page 1354. It was to the effect that the plaintiffs were each employed by the defendant for a period of one year from July 24, 1931, if there was work to do, and that they were each entitled to recover damages from the defendant for being wrongfully dismissed on October 5, 1931.

The defendant, the employer of the plaintiffs, subsequently appealed against Judge Logie's judgment, and the Ontario Court of Appeal, in a judgment handed down on April 24, 1933, allowed the appeal.

Mr. Justice Middleton delivered the judgment of the Court of Appeal. He pointed out

that the trial judge had not dealt with an aspect of the case which in his opinion was fatal to the plaintiffs' claim.

"Apparently before the making of the agreement referred to in the reasons for judgment of the trial Judge, the defendants' shop was a union shop. The defendants themselves were members of the Manufacturers' Association. The employees were all members of the Amalgamated Clothing Workers of America, an international body. This meant co-operation between the shop and the workers' union. No one could be employed in the shop unless he was a member of the union. The union controlled the employment. Business being very dull the defendants apparently conceived the plan of establishing an independent shop and themselves resigning from the Manufacturers' Association. It was expected that this would enable goods to be manufactured at a lower price, and consequently steadier work would be secured for the employees and greater profit for the shop. With this in view the agreements were drawn up and executed, the defendants withdrew from the Manufacturers' Association and the employees from their local union. As might have been foreseen this provoked keen antagonism on the part of the Amalgamated Clothing Workers of America. The shop was besieged, the workers were intimidated and beaten, the police force failed to give any adequate protection, and in the end the defendant found themselves unable to carry on and capitulated, making an agreement with the workers' union to operate in future under it. About half the workers who had resigned from the union had repented and yielding to persuasion and violence had rejoined the union before this decision was arrived at by the defendants. Some of the remaining workers were received back into the union; others, including the plaintiffs, who had resigned from the Union and had not been reinstated, found themselves unemployed: hence this action.

"The parties here must be held to have made their bargain on the footing that it would be possible to operate and maintain an inde-

pendent shop, that the police force would be able to protect both parties from mob violence and permit them to enjoy the freedom of contract which is rightly deemed to be an essential privilege in civilized countries, and that therefore a term is to be implied, although not expressed, in the contract, that it is founded on the continued existence of an independent shop the destruction of which by *vis major* would free either party from liability if the terms of the contract should be frustrated by acts of violence and misconduct over which neither contracting party had control and which the police force of the community did not keep in hand. This principle is enunciated by Lord Hanworth in *Walton Harvey Ltd. v. Walker and Homfray's Ltd.* (1931) 1 Ch. 274,— 'where some higher authority has supervened and has prevented the completion of the terms of an agreement, such failure to perform the agreement is not to be imputed to one of the parties but is due to what has subsequently made performance impossible with the result that the defaulting party is not to be answerable in damages to the other party.' Reference also to *Nickoll v. Ashton*, (1901) 2 K.B. 126, where A. L. Smith, M.E., at 132 said: 'The true construction of the contract is that it is not a positive and absolute contract as contended for by the plaintiffs but is a contract subject to the condition that the parties shall be excused if before breach performance becomes impossible by reason of the particular specified thing ceasing to exist without the defendant's default.'"

The learned Justice of Appeal said that there was another serious difficulty in the plaintiff's way. The agreement was in the nature of a collective bargain between the employer and the employees, and when the majority of the employees abandoned it and rejoined the union, thus making it impracticable for the employer to continue as an independent shop, the agreement came to an end. There must be implied a term relieving the employer in such circumstances. The appeal must be allowed and the action dismissed.

[NUMBER 7

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

INDUSTRIAL employment in Canada at the beginning of June showed an important expansion, according to data tabulated by the Dominion Bureau of Statistics from 8,105 firms, each employing a minimum of 15 persons, the data being representative of all industries except agriculture, fishing, hunting and highly specialized business. The reporting firms had 743,572 employees on June 1, as compared with 715,068 on May 1. This increase was the greatest reported in any month since June 1, 1930, being approximately twice as large as the gain indicated at the beginning of June in either 1931 or 1932; it was, however, rather less than the average gain shown between May and June in the years since 1920. The index of employment (with the average for the calendar year 1926 as the base equal to 100) stood at 80·7 on June 1, 1933, as compared with 77·6 on May 1, 1933, and 89·1 on June 1, 1932. At the beginning of June in the preceding eleven years, the index was as follows:—1931, 103·6; 1930, 116·5; 1929, 122·2; 1928, 113·8; 1927, 107·2; 1926, 102·2; 1925, 95·6; 1924, 96·4; 1923, 98·5; 1922, 90·3 and 1921, 87·7.

At the beginning of June, 1933, the unemployment percentage reported to the Department of Labour by local trade unions was 23·8 in comparison with 24·5 per cent at the beginning of May, 1933, and 22·1 per cent at the beginning of June, 1932. The June percentage was based on the reports forwarded to the Department of Labour by 1,704 labour organizations with a total of 148,016 members.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed that the number of placements effected each day during May, 1932, was greater than that recorded daily during the previous month, but somewhat below the corresponding average for May, 1932, the major gain under the first comparison being in construction and maintenance, and the greatest decline under the second, in services. Vacancies in May, 1933, numbered 32,693, applications 55,706, and placements in regular and casual employment 30,952.

Statistical information as to the employment situation at the beginning of June will be found on another page, being based on reports received from employers and trade unions throughout Canada, and from the offices of the Employment Service of Canada. The reports of the superintendents of the Employment Service for June are outlined in another article describing the industrial situation at the end of that month.

The table of monthly statistics reflecting industrial conditions in Canada which appears on page 675 gives the most recent information available. Improvement is indicated by the rise in wholesale prices, the advance of 6 per cent during the past four months being the greatest in some years, and by the increase in employment which appeared chiefly in manufacturing where the greatest seasonal improvement in twelve years was experienced. Bank debits and car loadings also showed improvement. Steel production increased and while there was no production of pig iron in March, April and May, several furnaces renewed operations toward the end of June. The figures showing production of sugar, footwear, newsprint and passenger automobiles as well as the output from central electric stations indicated improvement over the same period a year ago. Building and construction continued on a low level as indicated by figures as to permits issued and contracts awarded.

The cost per week of a family budget of staple foods, fuel and lighting, and rent was again lower, due mainly to reductions in rent in some localities and to lower prices of anthracite coal. Foods declined only slightly, higher prices for meats, flour, sugar and potatoes being more than offset by declines in the prices of dairy products. The cost of the budget including fuel and rent with that of foods was \$15.41 for June as compared with \$15.57 for May; \$16.20 for June, 1932; and \$21.44 for June, 1930. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based on prices in 1926 as 100, again advanced, continuing the movement which commenced in March. The index for June was 67·6 as compared with 66·9 in May; 63·6 in February and 93·4 in June, 1929. The advance was due mainly to higher

prices for grains, raw cotton, raw silk, raw wool and non-ferrous metals.

The time loss due to industrial disputes during June was almost three times as great as that recorded for the previous month, the number of workers involved also showing a substantial increase, due chiefly to the occurrence during the month of a dispute involving 1,300 pulpwood cutters in Northern Ontario and causing a time loss of 18,000 working days. As compared with June, 1932, a slight decrease appeared in the number of disputes recorded, the number of workers involved and the time loss incurred showing a similar decline. There were in existence during the month fourteen disputes, involving 3,249 workers and resulting in a time loss of 34,834 working days, as compared with sixteen disputes, involving 1,542 workers and resulting in a time loss of 11,927 working days in May. In June, 1932, there were on record sixteen disputes, involving 4,006 workers and resulting in a time loss of 40,182 working days. At the end of the month there were two disputes in progress recorded as strikes and lockouts, involving approximately 612 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been called off by the union.

#### **Industrial Disputes Investigation Act**

The Department recently received reports of two Boards of Conciliation and Investigation established in connection with disputes

(1) between various shipping companies at Montreal and their longshoremen, and (2) between the Hull Electric Company and its operating and maintenance employees. One new application for the establishment of a Board was received and was under consideration at the close of the month. An account of the recent proceedings under the Act, with the text of the two reports above mentioned, will be found on another page.

#### **"Labour Legislation in Canada, 1932"**

The fourth annual supplement to the volume "Labour Legislation in Canada as existing December 31, 1928" has been published by the Department of Labour under the title: "Labour Legislation in Canada, 1932." The new supplement follows the lines of former reports, containing the text of the various Dominion and provincial labour laws, together with certain orders in Council and a number of regulations made under statutory authority, notes being added to the text to interpret new amendments. It contains also a cumulative index to the

main volume and the four supplements, this index forming a useful guide to the entire body of labour laws in force in Canada as at December 31, 1932.

The volume of 1928 may be obtained from the Department of Labour for one dollar, the charge for each of the four annual supplements being 25 cents.

#### **Labour Code of the Province of Quebec**

A revised edition of the "Code of Labour and Industrial Laws of the Province of Quebec" has appeared recently, consolidating the labour legislation

of the province up to the end of 1932. This compilation is the work of Mr. Gustave Francq, now chairman of the Women's Minimum Wage Commission of the Province. It includes the text of provincial laws affecting labour, with the orders and regulations thereunder, and also gives the text of various Dominion Acts that are of special interest to workers in the Province. For example, the text of the Women's Minimum Wage Act is followed by the Orders issued by the Board to date; the Workmen's Compensation Act is supplemented by instructions "what to do in case of accident," "information for employers," etc.; and the Inspection of Scaffolding Act is illustrated by drawings showing the correct methods of scaffold construction. This arrangement makes the volume an exceptionally convenient handbook for practical use.

#### **"National Health Review" published at Ottawa**

A new publication that should render important service to public health authorities and to medical practitioners in Canada, was begun this year by the Na-

tional Health Division of the Department of Pensions and National Health (Ottawa). The *National Health Review*, of which the second number appeared in June, takes the place of a monthly bulletin containing abstracts of recent medical publications, which the Department had conducted for the past ten years. The "foreword" to the first issue states the purposes of the new magazine as follows:—

"It is quite realized that the busy practitioner has neither the time nor, probably, the opportunity to cover the broad field of reading that deluges the profession from every angle; nor should he be expected to subscribe to more than his share of scientific periodicals. It was, therefore, obvious that the Department should undertake, in the interests of science, to weed out the less important and abstract the worthwhile material and present this in brief form to the profession at frequent intervals... We believe that the quarterly will

be of greater value to the profession if it contains one article per issue on whatever subject appears to be timely and of general interest, together with carefully selected abstracts.

"The public is rapidly becoming more informed, through the press and other interested agencies such as life insurance companies, on the newer aspects of public health and more particularly, concerning preventive medicine. We shall, therefore, endeavour to secure and convey to you new developments along that line. To prevent disease requires effort on the part of the individual, the family, the municipality and the State, but there must be co-ordination of effort. It is with this in view that the *National Health Review* will come to you quarterly, in the hope that it will be a co-ordinating force in that part of your practice that merges with health problems; because, it is now generally conceded that the family doctor is the first line of defence against disease and in support of physical fitness. It is to the family doctor that the family should turn for their Public Health guidance, he, in his turn, apportioning to the family that responsibility which is theirs and notifying the municipality, or State, to accept responsibilities that belong to them. These are the personal things in which the family doctor is the co-ordinating force. On the other hand, the municipality, through its Public Health program, co-ordinates its forces and deals with the community matters, such as pure water, pasteurized milk, quarantine and general sanitation... On the other hand, the family doctor must continue to be the chief instrument through which Public Health is administered. Schools of Hygiene and Public Health laboratories are in a large measure the sources and proving grounds for newer ideas in Public Health practice. It is, therefore, imperative that the line of communication between the proving grounds and the unit in the field (the family doctor) be kept actively in operation, and it is hoped that this newly designed quarterly will fulfil—at least in part—this important mission."

A feature of the first number was a series of articles from the Provincial Officers of Health describing conditions in their respective provinces.

#### Canadian industry and United States legislation

*Pulp and Paper of Canada*, the monthly magazine published by the Canadian Pulp and Paper Association, discusses the possible effects of recent legislation

in the United States upon the Canadian pulp and paper industry, particularly upon the newsprint branch. "Mr. Roosevelt's plan of

a body to stabilize industrial production and distribution so as to eliminate unfair and destructive merchandising practices will undoubtedly have an effect on Canadian newsprint producers. A system of licensing imports to those who conform to standards of business that are likely to be established in the United States could become very awkward hindrances to the successful operation—or even the continued operation at all—of Canadian mills. It seems likely that Canadian business would be more closely regulated through the operation of trade organizations, either existent or to be formed under the new scheme of things, and it would seem therefore the sensible thing for Canadian newsprint manufacturers to make use of the facilities of the Canadian Pulp and Paper Association to get ready for the new order of business in the United States, which is likely to operate for several years without the hindrance of the Sherman Law."

A summary of the Industrial Recovery Act and other measures enacted at the recent session of the United States Congress appears on another page of this issue.

#### Settlement of wages dispute on United States railways

The principal railways in the United States on June 15, 1933, notified the representatives of the various classes of employees of a decrease in basic rates of pay of 22½ per cent effective from November 1, 1933, replacing the ten per cent deduction in effect since February 1, 1932. The representatives of the twenty-one unions of the employees refused to agree to this and the Federal Co-ordinator of Transportation recently appointed under the Emergency Railroad Transportation Act as a mediator discussed the matter with each party, and at a conference on June 21, it was agreed that the ten per cent deduction would be continued until April 30, 1934.

#### New minimum wage laws in United States

In 1923 the United States Supreme Court, in the case of *Adkins versus Children's Hospital*, affirmed the decision of a lower court which declared the minimum wage law of the District of Columbia to be unconstitutional, mainly on the ground that it interfered with the right of the citizen to contract his labour freely (LABOUR GAZETTE, May, 1923, page 461; January, 1923, page 77). Similar decisions were rendered later in regard to the laws of Arizona and Arkansas.

With a view to overcoming the constitutional difficulty the National Consumers' League drafted a standard minimum wage bill and legislation based upon this standard bill has been adopted recently by the legis-

latures of New Hampshire, New Jersey, New York and Utah (*Monthly Labour Review*, June, 1933, page 1259). "The law," it is stated, "does not attempt to fix a living wage. Whenever a substantial number of women and minors in any occupation are receiving less than a subsisting wage the law provides that the industrial commission may conduct an investigation to determine whether the wages are 'fairly and reasonably commensurate with the value of the service or class of service rendered.' The law defines an unreasonable wage as one that is 'less than the fair and reasonable value of the services rendered and less than sufficient to meet the minimum cost of living necessary for health.' Under the terms of the law, power is granted to the labour commissioner, after a directory minimum wage order has been in effect for a period of time—five months in New Hampshire and nine months in New Jersey and New York—to make such wage orders mandatory, if he is of the opinion that 'the persistent non-observance of such order by one or more employers is a threat to the maintenance of fair minimum wage standards.' Employers who fail to observe the provisions of the law and the orders of the labour official are liable to fine and imprisonment. The Utah minimum wage law is similar to the California law. The industrial commission is empowered to ascertain the wages paid, and the hours and conditions of labour in the various occupations. Upon investigation, if it is determined that the wages paid 'are inadequate to supply the cost of proper living,' the law provides that the commission shall call a 'wage board' into conference. After a public hearing, the commission is empowered to fix a minimum wage, a maximum number of hours, and the standard of conditions of labour 'demanded by the health and welfare of the women and minors engaged in every occupation.' A mandatory order may be subsequently issued setting forth the minimum wage and the maximum hours."

Prior to the enactment of these three laws, minimum wage legislation had been enacted in nine other states, namely, California, Colorado, Massachusetts, Minnesota, North Dakota, Oregon, South Dakota, Washington and Wisconsin.

#### Old Age Pension legislation in U.S.A.

September, 1932, page 948, and in previous issues). With these additions the number of

Nine additional States have this year adopted old age pension legislation (the progress of pensions in the United States was outlined in the LABOUR GAZETTE,

State old age pensions laws is 26, of which 20 are mandatory. New legislation was enacted in Arkansas, Arizona, Indiana, Maine, Michigan, Nebraska, North Dakota, Oregon and Washington. Colorado, moreover, re-enacted an earlier pension law in amended form so as to meet the constitutional objection recently made by the Supreme Court of the State; while Minnesota amended its optional law to make it mandatory upon the counties. The present standing of old age pension legislation in the United States is summed up by the *American Labour Legislation Review*, June, 1933, as follows:

"The old age pension movement has now been successful in more than half of the States. In the number of pension laws enacted, this has been a record year. The first constitutional state laws were enacted by Montana and Nebraska in 1923, following the drafting of the 'Standard Bill' in 1922 by the American Association for Labour Legislation in co-operation with the Fraternal Order of Eagles. Other states have enacted pension laws for the most part following the essential provisions of the standard bill, as follows: Wisconsin (1925), Kentucky (1926), Colorado and Maryland (1927), California, Minnesota, Utah and Wyoming (1929), Massachusetts and New York (1930), Delaware, Idaho, New Hampshire, New Jersey and West Virginia (1931).

#### Effects of change from 8-hour to 6-hour day

The conclusions reached in a study of the change from an 8-hour day to a 6-hour day in a factory employing mainly women are described in Bulletin No. 105 of the

Women's Bureau of the United States Department of Labour. In December, 1930, when the change to a 6-hour working shift was made by this factory, the plant was running three shifts of 8 hours each, operating continuously except that it shut down for 24 hours once a week. With the exception of the general office and a few occupations where the volume of production did not permit of continuous operation, the entire plant was changed to four shifts of 6 hours each. This necessitated the employment of more women, and the records show that the average number on the payroll during a 4-week period just before the change and during a 4-week period one month after the change increased from 298 to 415, or 39 per cent. At the same time the hourly rates of pay for the women were increased 12½ per cent, while the men were guaranteed a minimum of \$4 a day. Practically all pay was on an hourly basis plus a production bonus. A year later the women

received a second increase in hourly rates of  $12\frac{1}{2}$  per cent, so at the time of survey there had been a total increase of 25 per cent over the rates in effect before the change in hours.

The advantages of the new arrangement were summed up by the management as follows: (1) Increased daily production from the plant as an operating unit, due to increased production at every station or task, slight in itself but considerable in the aggregate; (2) Elimination of meal periods, with their waste, and the expense of a large cafeteria; (3) Increased return from the capital invested in plant and machinery, owing to the increased rate of plant operation; (4) Opportunity for reorganizing the working force to rectify inequalities and to fit all "pegs" in appropriate "holes"; (5) Decreased overhead due to the fact that the factory produces more goods per dollar of overhead than under the 8-hour shift.

The workers expressed their preference for the new plan on the ground that the shorter work-day resulted in higher earnings, that it lessened fatigue, improved the conditions of their home life, and opened up new opportunities for the use of leisure time.

#### **Progress of co-operation in home building**

The fourth International Congress of Building Societies was held at London in June, the delegates in attendance representing 3,000,000 members in Great Britain, Ireland and Australia, New Zealand, South Africa, Bulgaria, France, Sweden, Germany, Austria, the United States, Denmark, Belgium and other countries. It was stated that in Great Britain to-day the building society movement controlled assets aggregating over £469,000,000; the annual average advances to members for the three years ended 1932 amounted to £87,000,000; the advances in 1930 were approximately equivalent to the net output of the building and contracting trades in that year, and to that of the iron and steel trades; the amount advanced during the three years ended 1932 exceeded the new capital issues applied to industrial purposes in the United Kingdom during the same period; building societies had provided finance for about 1,000,000 of the new houses, or roughly half the total number erected since the war; concurrently they had made advances on old properties, and in all had loaned a total of no less than £719,000,000 during the post-war period 1919-32.

The Prince of Wales, in a speech to the delegates, said that the achievements of build-

ing societies in the post-war years was one of the most stimulating features in our social and economic life. "During these years," he said, "Great Britain has slowly but surely overcome the most acute phase of housing shortage in its history. Approximately 2,000,000 houses have been erected in England and Wales since the year 1919, and to the various forms of State and local government assistance must be added your own practical contribution in helping to finance this gigantic housing effort. The word gigantic is not misapplied in this connection, for I see from the official statistics that British building societies have advanced over £626,000,000 to assist house purchase since 1919, and that you now have something like 2,500,000 individuals who are using the service you provide. But in spite of the achievements of the post-war years we must remember the fact that there are not yet enough homes of the right type in this country. We have a great responsibility in this country in the matter of re-housing and slum clearance, and it is a responsibility in which building societies play a very prominent part."

#### **Centenary of the first British Factory Act**

In connection with the opening of the 17th International Labour Conference the *Manchester Guardian*, on June 7, called attention to the fact that it marked the centenary of the passage of the Act with which the modern British system of the statutory regulation of the conditions of labour first began—the Factory Act of 1833. "That Act—passed in August, 1833—established, for the first time, a Government factory inspectorate, the pre-requisite for the practical enforcement of statutory conditions, and is thus the starting-point of the ever-growing body of industrial legislation in all countries which it is the function of the International Labour Office of the League to strengthen and extend. There is a further and more domestic interest in the centenary on which we have less reason, perhaps, to congratulate ourselves. With the Act of 1833, almost as an afterthought, came the first effort at compulsory education in England; and the issues raised in 1833 on the school attendance of the factory child warped educational development until 1918. The Act of 1833 to restrict the labour of children in textile factories was one of the two great achievements of the first year of the Reformed Parliament; the other was the Act abolishing slavery in the British colonies."

**Firedamp  
alarms desired  
by British  
coal miners**

The Miners' Federation has prepared a statement for the consideration of the British Parliament, recommending the compulsory instalment of automatic firedamp alarms in coal mines. The Federation states that an average mine employing 1,000 men underground can be equipped with these alarms at a cost of £3 a week, and against this charge could be set savings in insurance and accident compensation. This automatic alarm is a lamp which shows a red light when gas is present. It tests for gas automatically and continuously, and the Miners' Federation is satisfied that it will reduce the liability to accident.

The Federation points out that notwithstanding the Davy safety lamp (which was invented in 1815) and recent advances in methods of detection, the protection of miners against gas remains far from adequate. Gas is described as the greatest menace to safety in the industry, being directly the cause of explosions, and also, indirectly, limiting the amount of lighting that is possible in a mine. Better lighting would greatly reduce haulage accidents and also accidents due to falls of roof. It would minimize the occurrence of miners' nystagmus, which is a cause of the constant incapacity of 10,000 men and a charge on the industry of approximately £500,000 a year.

Mr. P. J. Wood, president of the Industrial Accident Prevention Associations of Ontario, addressing the directors' annual meeting at Hamilton in June, stated his opinion that forgetfulness and carelessness were the principal cause of the accidents which he had investigated. Everyone, he said, is subject at times to a "mental blind spot," which results in actions contrary to teaching, training and experience. It is necessary therefore, to develop a safety instinct, industrial workers being drilled in accident prevention so that they may subconsciously take the safe course in any emergency.

Section 10 of Regulations of 1931 under the Mineral Resources Act of Saskatchewan, which provided that the minimum coal mining area to be disposed of shall be forty acres, was amended by a provincial order, dated May 20, 1933, which stated that "in view of existing economic conditions and in order to reduce the amount of illegal coal mining and assist the small operator the said section 10 should be amended by striking out the word 'forty' in line two thereof and substituting therefor the word 'twenty.'"

The *Quebec Official Gazette*, June 17, 1933, contained the text of new rules and regulations relating to the Steam Boilers and Pressure Vessels Act. The regulations govern the construction of pressure vessels and their installation, and provide for their annual inspection.

The *Business Survey*, published monthly by the National Industrial Conference Board (United States), reported in its issue of June 20 that business activity showed steady improvement during May and the first half of June. Production in major industries increased during the same period, moving counter to seasonal tendencies. Employment in manufacturing industry rose 5 per cent between April and May, although the seasonal movement of recent years is a slight decline. Weekly earnings moved up sharply with a rise in hours worked per week. The cost of living in May was about one per cent above the April level.

The British Ministry of Labour recently issued a circular to explain how far unemployed persons may receive unemployment benefit or transitional payments while engaged in certain occupations or activities. For the receipt of either the benefit or the payments a person must be unemployed, but the Ministry points out that there are many things he can do to occupy his time without ceasing to be "unemployed" in the sense in which that word is used in the Unemployment Insurance Acts. If a man is not working under a contract of service and derives no remuneration or profit from his work in money or in kind then no question arises—he will be regarded as unemployed. But if the work he does is done under a contract of service or if he derives remuneration or profit from it, then he is not unemployed unless (1) he could have done the work or followed the occupation in addition to his usual employment and outside his ordinary working hours, and (2) the remuneration or profit does not exceed 3s. 4d. on the daily average. All the work need not be done outside the ordinary working hours of the man's usual employment if it could be so done when he is in his usual employment. In addition to being unemployed, a man must be available for work. He must therefore be free and willing to accept at once any offers of suitable employment and to relinquish, if necessary the occupational activities in which he has been engaged during unemployment. If he leaves his home area he should first make arrangements to be recalled as soon as there is opportunity of getting work.

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

|   | 1933       |               |               | 1932          |               |               |

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**A**N application for the establishment by the Minister of Labour of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was received in the Department of Labour on June 5 from certain employees in the water works, engineer's and power house departments of the Corporation of the City of Edmonton, being members of the Edmonton Civic Employees' Union No. 30. The dispute arose in connection with the alleged unjust suspension and dismissal in 1930 of Malcolm Ainslie, a member and business agent of the union above named. The application states that 300 employees are directly concerned in the dispute and 1,000 indirectly. In view of the suggestion of the representatives of the employees that, pending the establishment of a Board, an officer of the Department endeavour to effect a settlement by conciliation, the western representative of the Department, Mr. F. E. Harrison, has been instructed to take this matter up with the parties concerned when in Edmonton with a view to assisting them in reaching an amicable settlement of the dispute if at all possible without the necessity of Board procedure.

The text of the report of the Board of Conciliation and Investigation which dealt with a dispute between the principal railways in Canada (the Canadian National Railways and

Canadian Pacific Railway and subsidiary railways) and their locomotive engineers, locomotive firemen, conductors, trainmen and telegraphers, together with the text of the minority report submitted by the employees' nominee on the board, Mr. W. F. O'Connor, appeared in the May issue of the *LABOUR GAZETTE* at page 478. The board recommended that the ten per cent deduction provided in the agreement of February 4, 1932, be continued, and that after May 1, 1933, an additional deduction be made of ten per cent, making a total deduction of twenty per cent from the wages earned subsequent to May 1, 1933. The recommendations of the board were accepted by the railway managements, who stated that, pending negotiations with the representatives of the employees for the revision of the agreements in accordance with the board's report, the change would be put into effect as from May 1, 1933. The board's findings were not acceptable to the employees, and, after conferences with the railway officials and with the Minister of Labour, it was arranged that a joint meeting of representatives of the railways and of the employees would be held in the Confederation Buildings at Ottawa on Wednesday, June 28, at which the Minister of Labour would be present. A settlement of the dispute was not, however, reached at this conference.

### Report of Board in Dispute Between Various Shipping Companies Trading to the Port of Montreal and their Longshoremen

A unanimous report was received by the Minister of Labour on June 19 from the Board of Conciliation and Investigation established to deal with a dispute between various shipping companies trading to the Port of Montreal, P.Q., and certain of their employees being members of the Syndicated Longshoremen of the Port of Montreal. A reduction of approximately 10 per cent in the hourly rates of wages proposed by the employers was the cause of the dispute. The Board's recommendation that the basic rates of pay should be reduced by approximately 5 per cent, has been accepted by both the employers and employees concerned as a settlement of the dispute and an agreement embodying the Board's finding was signed June 30.

The personnel of the Board was as follows: the Honourable Mr. Justice Louis Cousineau, of Aylmer, P.Q., chairman, appointed by the Minister in the absence of a joint recom-

mendation from the other members, Messrs. F. Curzon Dobell and John A. Sullivan, M.P., both of Montreal, nominated by the companies and employees, respectively.

The text of the Board report follows.

#### Report of Board

*In the matter of the Industrial Disputes Investigation Act and in the matter of differences between various shipping companies trading to the Port of Montreal, P.Q., and certain of their employees being members of the Association of Syndicated Longshoremen of the Port of Montreal.*

To the Hon. W. A. GORDON, K.C., M.P.,  
Minister of Labour.

The Board of Conciliation and Investigation established in the matter above referred to begs respectfully to make its report and recommendations as follows:—

Several sessions of the Board have been held during the months of May and June. Some of these have been attended by representatives of the Employers and the Employees who have

presented their cases and have given the explanations required by the members of the Board, and others have been attended only by the members of the Board for the purpose of discussing all phases of the dispute submitted to it for investigation with the object, if possible, of agreeing upon recommendations for its settlement. No oral evidence was taken, but each party to the dispute was invited to submit a written factum enumerating the reasons for the position taken by it and its arguments in support of such position. Each party was likewise given an opportunity of replying in writing to the factum filed by the other side. The material so produced by the two interests explained the situation in clear and simple terms to the members of the Board, and was not only of great assistance to them but has also shortened the inquiry and accelerated their decision as to the recommendations to be made.

The agreement between the Employers and the Employees, which was in operation during the last shipping season of the Port of Montreal, was executed on April 11, 1932, and ceased to have effect on December 31, 1932. The scale of wages provided by this Agreement was as follows:—

**General Cargo.**—59 cents per hour from 7 a.m. to 12 noon and from 1 p.m. to 6 p.m. 69 cents per hour from 7 p.m. to 11 p.m. 79 cents per hour from 12 midnight to 5 a.m.

**Bulk Cargo.**—72 cents per hour from 7 a.m. to 12 noon and from 1 p.m. to 6 p.m. 82 cents per hour from 7 p.m. to 11 p.m. 92 cents per hour from 12 midnight to 5 a.m.

On March 1, 1933, the Employers suggested the execution of a new agreement for the current season of navigation and, alleging that the shipping industry was in deplorable condition, offered the following reduced wage scale:—

**General Cargo.**—53 cents per hour for day work. 63 cents per hour for all night work.

**Bulk Cargo.**—65 cents per hour for day work. 75 cents per hour for all night work.

In answer to this offer the Employees maintained that they could not reasonably be asked to agree to lower wages than those which had been in force last year. After several meetings between the representatives of the two parties had proved abortive, the present Board was established for the purpose of making its recommendations for the settlement of the dispute.

The arguments presented by the Employers and the Employees, with the replies of each to the other's arguments, may be summarized as follows:—

### 1.—VOLUME OF TRADE

The Employers contend that during the past three years the ocean steamship companies have been seriously affected by the general depression in trade, often finding it impossible to secure a complement of general cargo for their vessels.

To this contention the Employees reply that the Port of Montreal is less affected by the general depression in trade than other Atlantic Ports and refer to the report of the Harbour Commissioners of Montreal for the year 1932 as showing increases in both import and export traffic for the season as compared with the previous season.

The Employers in return point out that the increase in imports is due entirely to a larger volume of coal and oil, neither of which commodities is unloaded by or provides work for longshoremen, and that the increase in exports is likewise due entirely to a larger volume of grain for the loading of which the longshoremen receive the bulk cargo rate, whereas the companies receive for its carriage only one-half the freight rates which were in force in 1928.

### 2.—FREIGHT RATES

The Employers contend that they have in recent years been forced to make heavy reductions in the rates of freight charged to shippers and importers for the carriage of their goods and quote in their factum the percentage of such reductions effected in the rates for the carriage of sixteen of the principal commodities shipped from Montreal, ranging from 21 per cent to 45 per cent and averaging 33½ per cent.

To this contention the Employees reply that such reductions in freight rates apply not only to the Port of Montreal, but to all other Atlantic seaports.

### 3.—DIVERSION OF TRAFFIC

The Employers contend that in reducing their freight rates as above mentioned they have been actuated by the object of securing the shipment via the Port of Montreal of as much traffic as possible, that as a result they have been forced to reduce their costs of handling in the Harbour, including the wages paid to longshoremen, but that this does not impose any hardship on the longshoremen as without such reduction the work would not be available. They state that a considerable volume of general cargo which was formerly transshipped at Montreal, providing work for the local longshoremen, was last year carried direct from Great Lakes ports to overseas countries in foreign tonnage, but that this year both in order to attract this traffic back to the Port of Montreal and in order to prevent still greater diversion of traffic they have been forced to make further heavy reductions in freight rates.

The Employees in reply to this contention invite the Employers to prove the tonnage of freight alleged to have been carried last year from Great Lakes' ports to overseas countries and state that in their opinion it does not exceed one-tenth of one per cent of the total tonnage carried through the Port of Montreal.

In answer to this invitation the Employers file as an Exhibit a list establishing the tonnage that was last year carried direct from Great Lakes' ports to Europe in foreign vessels. They reiterate that in addition the further drastic reduction in rates made this year has prevented a still larger diversion of such traffic.

### 4.—RELATION BETWEEN WAGES PAID TO LONGSHOREMEN AND THEIR COST OF LIVING

The employers produce the following statement showing the basic rate of wage paid to longshoremen in the Port of Montreal from 1921 to 1933 and showing the average cost of living in each year as disclosed by figures published in the LABOUR GAZETTE:—

| Year      | Basic Rate for season (Gen. Cargo) | Cost of Living Weekly Budget (Labour GAZETTE) March | Average Prices (all items) Index Number March |
|-----------|------------------------------------|---|---|
|           | cents                              | \$  |   |
| 1921..... | 60                                 | 23 87   | 175   |
| 1922..... | 50                                 | 20 96   | 157   |
| 1923..... | 50                                 | 21 42   | 159   |
| 1924..... | 62                                 | 21 00   | 157   |
| 1925..... | 62                                 | 21 00   | 156   |
| 1926..... | 62                                 | 21 77   | 159   |
| 1927..... | 65                                 | 21 29   | 157   |
| 1928..... | 65                                 | 21 15   | 156   |
| 1929..... | 65                                 | 21 52   | 157   |
| 1930..... | 65                                 | 21 96   | 159   |
| 1931..... | 65                                 | 19 47   | 145   |
| 1932..... | 59                                 | 17 16   | 131   |
| 1933..... | 53                                 | 15 59   | 122   |

and submit not only that the basic rate of 53 cents per hour proposed for this year is as high a rate as can be justified by the financial situation of the Steamship Companies which are carrying on unprofitably services essential to the trade of the country, but also that the reduced cost of living at the present time makes this wage superior in purchasing power to the higher wages in force in previous years. They maintain that the 65 cents rate which was mutually agreed upon at the opening of the 1927 season of navigation may be assumed to have been a fair rate of wage at that time, but that 53 cents now has more purchasing power than 65 cents had in 1927. They also contend that they would have been justified in reducing the wage scale from 65 cents before they did so, but that they agreed to maintain the 65 cents rate in force during 1931, in spite of the depressed condition of the shipping industry and in spite of the decline in living costs, in the hope that conditions would improve during that season, a hope which was not destined to be fulfilled.

The Employees maintain that, although the same rate of wages was continued in 1931, a drastic change in rules of work was agreed to at the Employers' demand which, together with the introduction of mechanical equipment, resulted in a decrease of actual earnings amounting in some cases to 50 per cent.

To this the Employers reply that changes in working conditions and the introduction of mechanical equipment have caused no substantial reduction in hours of work and quote the average weekly wages paid in 1931 and 1932 by the principal Companies. The Employers contend that in spite of the 10 per cent reduction of wages effected in 1932 no material reduction in earning power was suffered by the longshoremen due to the changed working conditions.

##### 5.—RATE OF WAGES REQUIRED TO PERMIT THE LONGSHOREMEN TO MAINTAIN A REASONABLE STANDARD OF LIVING

The Employees contend that their earnings are not sufficient to maintain themselves and their families and that no further reduction in their wages should be allowed.

To this the Employers reply that if a longshoreman's wages are not sufficient to maintain him and his family in the proper standard of living the cause must lie either in an insufficiency of volume of traffic or in a superabundance of longshoremen employed in hand-

ling that traffic. They state that by reducing freight rates they have done their best to attract the maximum tonnage to the Port of Montreal, but that the number of longshoremen who are members of the Union and therefore available to the handling of that traffic is within the exclusive control of the Employees, not the Employers.

The Employers also state that the Employees have admitted to their Union within the past year a considerable number of new members and have thus aggravated a situation already acute.

##### 6.—COMPARISON WITH OTHER TRADES

The Employers contend that the Employees are not being penalized in comparison with other workers when they are asked to accept a reduction in their basic rate of wage from 65 cents an hour in 1930 to 53 cents an hour in 1933, to wit, a reduction of 18.4 per cent, and produce a statement showing the rates of wages in certain trades in Montreal as published by the Department of Labour and the reductions therein between 1930 and 1933, which average 32.9 per cent.

The Employees reply that if such wages have been reduced as mentioned the working conditions in the trades in question have remained the same, whereas the introduction of mechanical devices and appliances has resulted in a heavy reduction in working hours to them.

The Employers in turn reply that in the past three years working conditions have changed in all classes of labour and further contend that the changes in working conditions affecting longshoremen were merely changes giving the Employers the right to say what weights should be handled by mechanical gear.

##### 7.—COMPARISON WITH OTHER PORTS

The Employees contend that the Port of Montreal, although the largest, is the lowest paid seaport on the North Atlantic Coast, and suggest a comparison with rates of wage paid at Halifax, Saint John and Quebec, and that if the companies are forced to lower their operating expenses by reducing wages they should not select the lowest paid port as the first in which to put such reductions into force.

The Employers reply that the basic rate at Halifax was reduced by 10 per cent last December in the light of conditions as they then existed and that the agreement then entered into cannot be terminated before November 30, 1933. Similarly, the basic rate at Saint John was reduced by 10 per cent last December in accordance with the recommendation of a Board of Conciliation and Investigation and the agreement then entered into cannot be terminated before October 31, 1933. At Quebec the basic rate which has been 60 cents since 1925, was this year reduced by agreement to 57 cents, i.e., a reduction of 5 per cent, and this rate applies to the loading and unloading of both general and bulk cargoes, there being no differential for bulk cargoes as at other ports.

##### 8.—OTHER LABOUR

The Employers contend that they have for some years dealt exclusively with the Union, which is a party to the present dispute, but that similar work is now being carried out in the Harbour of Montreal at rates of wage very much lower than those which the Employers are now offering and that ample labour for their

purposes is available from sources outside the Union.

The Employees reply that such other labour is not qualified with the skill and experience necessary to serve the Employers to the best advantage.

#### 9.—AGGREGATE EARNINGS OF LONGSHOREMEN

The Employees contend that their earnings during the last two years have declined very considerably and file as an Exhibit lists which purport to show the average earnings of five gangs employed by one steamship line during the seasons 1931 and 1932, the result of which is to demonstrate that the men in these gangs earned in 1932 an average of \$4.39 per week less than in 1931.

The Employers attack this Exhibit as misleading, stating that it gives the average earnings of only five gangs employed by one company and secondly that the five gangs in question received other income from other steamship companies. The Employers file as an Exhibit a statement showing the aggregate weekly wages paid to gangs employed by them in 1932 covering 86 gangs, i.e. 1,376 Longshoremen, which they contend is a more reliable indication than the Employees' Exhibit.

#### 10.—AMOUNT OF REDUCTION PROPOSED BY THE EMPLOYERS

The Employers propose as fair and reasonable under the circumstances a reduction of 10 per cent in the basic rate of wage for general cargo, to wit from 59 cents to 53 cents and a reduction of 10 per cent in the basic rate of wage for bulk cargo, to wit from 72 cents to 65 cents.

The Employees contend that the fact of abolishing the higher rate previously earned by them between the hours of midnight and 5 a.m. is to make the reduction asked for by the Employers amount to 13 per cent rather than 10 per cent.

#### 11.—SEASONAL NATURE OF THE PORT OF MONTREAL

The Employees contend that the season of navigation into and out of the Port of Montreal is limited by local weather conditions and that they have to rely for their livelihood during the whole year on the work obtained during the limited season.

#### 12.—HAZARDOUS NATURE OF THE LONGSHOREMEN'S OCCUPATION

The Employees contend that they are constantly subject in the course of their duties to the danger of meeting with accidents, even fatal.

The Employers reply that their superintendents are at all times mindful of the risk of accident and that they take and have at all times taken the utmost possible precautions to safeguard the men in their employment.

#### 13.—WORKING CONDITIONS

The Employees contend that the removal in 1931 of the restrictions on sling-loads accelerates the loading and unloading of vessels, thus giving less work to them, and forces them to greater physical effort and attendant dangers. They suggest that a maximum sling-load be fixed for the unloading of sugar and baled paper.

The Employers reply that the movement of the sling-load is a mechanical operation, the only natural restriction on which is the weight

which the sling can carry with complete safety, and that the restrictions on hand-trucks operated by the men themselves have not been removed.

### Conclusions

The Members of the Board were in no doubt from the outset but that, in addition to considering the arguments presented by each side and specifically reproduced above, they were constrained by current conditions to endeavour by all means to make recommendations which would effect an arrangement mutually satisfactory to the two parties in dispute. On the one hand, the public interest must be furthered to the utmost extent possible by encouraging the Steamship Companies to carry on from our National port services essential to the trade of the country, which they allege are now being carried on unprofitably, and some measure of economic relief by way of reduction of handling charges must be accorded to them. On the other hand the difficulties by which all classes of labour are beset during the present period of depression are well known and the wages payable to the Longshoremen must not be reduced more than is reasonably necessary to permit the Steamship Companies to render efficient service to the community.

The members of the Board were impressed by and have taken full cognizance of the various arguments which were fully and clearly presented by both sides in their factums and which are summarized above. There is no doubt but that the representatives of each party to the dispute are entirely satisfied with the equity of their case and are themselves convinced that the positions which they have respectively adopted are justified. It then becomes the primary duty of this Board to endeavour to make a report and recommendation with which both parties can agree in accordance with the provisions of Section 63 of the Industrial Disputes Investigation Act, rather than to weigh minutely the merits of the arguments advanced by each side and, having decided in favour of one side, to make a report and recommendation which might not be acted upon by the other, thus leaving matters in the uncertain situation in which they stood before the establishment of the Board.

The Employers propose for the current year a reduction of 10 per cent in the basic rate of wage. The Employees insist that they are entitled to the same wages as they received last year. This is the basis of the dispute.

After careful consideration of all the arguments presented, and with the guidance and assistance supplied by the figures submitted in the parties' factums, the members of the Board have reached the conclusion that a reduction in the basic rates payable to Longshoremen of approximately 5 per cent from the rates in force last year would be equitable both to them and to their Employers, the Steamship Companies.

The Board therefore respectfully recommends that the dispute submitted to it for investigation should be settled by the introduction of the following rates of wage for Longshoremen at the Port of Montreal for the current season of navigation:—

**General Cargo.**—56 cents per hour from 7 a.m. to 12 noon and from 1 p.m. to 6 p.m.; 66 cents per hour from 7 p.m. to 11 p.m.; 76 cents per hour from 12 midnight to 5 a.m.

**Bulk Cargo.**—68 cents per hour from 7 a.m. to 12 noon and from 1 p.m. to 6 p.m.; 78 cents per hour from 7 p.m. to 11 p.m.; 88 cents per hour from 12 midnight to 5 a.m.

With regard to the working conditions to which objection was taken by the Employees on account of the time saved in loading and unloading vessels due to the introduction of new and improved machinery, the members of the Board are of the opinion that it is not within their province to make any recommendation which might appear to be designed to retard the march of progress or the advance of science. It is nevertheless true that such improved machinery should not be used by the Employers to the prejudice of their Employees, and without presuming to specify the number of pounds to which sling-loads should be restricted, the members of the Board would wish to take this opportunity of suggesting most earnestly to the Employers that, whenever possible and in particular in the case of cargoes of sugar and baled paper, sling-loads should be reduced to

such weights as to preclude any danger of accident to the men.

It only remains for the Board to express the hope that both parties will agree to act upon its recommendation in order that by making such sacrifices as are thereby entailed on each side the business of our National port may be carried on harmoniously and without friction between Employer and Employee.

The whole respectfully submitted,

Montreal, June 15, 1933.

## Report of Board in Dispute Between the Hull Electric Company and its Operating and Maintenance Employees

The Board of Conciliation and Investigation established at the end of May to deal with a dispute between the Hull Electric Company and its operating and maintenance employees presented a unanimous report to the Minister of Labour on July 4, together with a signed agreement between the company and employees in question disposing of the points at issue.

A wage reduction of approximately 10 per cent and an adjustment in working hours and conditions proposed by the company was the cause of the dispute. The agreement reached as a result of the Board's efforts provides for a wage decrease of about one cent per hour less than that originally proposed by the company for each group of employees.

The Board was composed as follows: Mr. Lynn B. Spencer, K.C., of Welland, Ontario, chairman, appointed by the Minister in the absence of a joint recommendation from the other members of the Board, Messrs. H. P. Hill, K.C., of Ottawa, and W. F. O'Connor, K.C., of Toronto, nominees of the company and employees, respectively.

Following is the text of the Board's report and of the agreement consummated between the parties to the dispute.

### Report of Board

Ottawa, June 29th, 1933.

To the Honourable,

The Minister of Labour,  
Ottawa.

SIR.—In the matter of the Board of Conciliation and Investigation established by you on or about the 27th day of May, 1933, under the Industrial Disputes Investigation Act, R.S.C., 1927, Chapter 112, with relation to a dispute between the Hull Electric Company and its operating and maintenance employees, of which Board Lynn B. Spencer, K.C., is Chairman and Hamnett P. Hill, K.C., and William F. O'Connor, K.C., are members, the undersigned respectfully report as follows:

1. That a settlement of the dispute was arrived at by the parties during the course of its reference to the Board, that pursuant to Section 25 of the Industrial Disputes Investigation Act a memorandum of the settlement was drawn up by the Board and signed by the parties, and that a copy of such memorandum is annexed to this report.

2. The proceedings of the Board were as follows:

(a) The Board was organized at Ottawa in the office of Mr. Hill on June 19th, 1933. Present Messrs. Hill and O'Connor. Arrangements were then made for securing attendance of the parties and witnesses for a hearing on the 22nd June, 1933, and quarters for meetings of the Board were secured in the Senate of Canada, Room 148. These arrangements were made in the interest of expedition at the request of the Chairman, who was unable to be present;

(b) The Board met at Room 148, the Senate, on June 22nd and 23rd and at Mr. Hill's office on June 24th and heard evidence and arguments. Present the Chairman, Mr. Hill and Mr. O'Connor.

(c) The Board met in Mr. Hill's office on June 26th and adjourned thence to the Chateau Laurier. Present the Chairman, Mr. Hill and Mr. O'Connor. Efforts were made to bring about an agreement between the parties and late in the day tentative agreement was reached, the terms of its expression to be settled and reduced to writing by Messrs. Hill and O'Connor next day (in the unavoidable absence of the Chairman) and signed by the parties.

(d) Messrs. Hill and O'Connor met in Mr. Hill's office on June 27th and prepared and agreed upon the form of a Memorandum of settlement which, however, did not prove satisfactory to both parties, and time was allowed for consideration until next day.

(e) Messrs. Hill and O'Connor met in Mr. Hill's office on June 28th and a redrafted Memorandum of Settlement in the terms of the copy annexed to this report was signed at Ottawa during the evening of the same day on behalf of the employees, and on the following day on behalf of the employer company.

3. The witnesses summoned and heard before the Board were J. J. Gibeault, Joseph Noel and W. A. Sutherland (who each attended for three days) and Cedric Mohr, (who attended

for one day). Other witnesses present and/or heard, but not summoned, were A. C. Brittain, A. E. Meach and C. W. Bolton.

4. The case of the employer company was presented by Mr. A. V. Gale, General Manager, and that of the employees by Mr. Magnus Sinclair.

Yours respectfully,  
(Sgd.) LYNN B. SPENCER,  
(Sgd.) H. P. HILL,  
(Sgd.) W. F. O'CONNOR.

The two members of the Board who were appointed thereto upon the nomination of special interests desire to add to the foregoing report an acknowledgment that the settlement happily attained in these proceedings would have been impossible but for the wisdom, graciousness, tact and persistence of the Chairman.

(Sgd.) H. P. HILL,  
(Sgd.) W. F. O'CONNOR.

The Hull Electric Company and its operating and maintenance employees hereby agree that, operative July 1st, 1933, all such employees now in receipt of wages of forty cents or upwards per hour shall accept a reduction of three (3) cents per hour, all such employees in receipt of wages of thirty to thirty-nine cents per hour shall accept a reduction of two (2) cents per hour, and all such employees now in receipt of wages of less than thirty cents per hour shall accept a reduction of one (1) cent

per hour, saving and excepting the company's freight crew of four men, which may be reduced to three men, these to be paid upon the basis of an eight hour instead of a ten hour day, the same wages per hour now being paid them.

This agreement is made by the parties to it with the understanding that the adequacy of the wage rates set by it is not intended to be determined thereby.

This agreement on the part of the employees is intended to express a voluntary concession made by such employees in view of the presently prevailing economic depression, the present financial condition of the employing company and to offset any inability of such company to earn its operating costs.

This agreement is made without prejudice to the right of either party thereto to apply, at any time after the making thereof, for any Board of Conciliation under the Industrial Disputes Investigation Act, upon compliance with the provisions of that Act.

Dated the 27th day of June, A.D. 1933.

On behalf of the Employees,  
(Sgd.) JOHN J. GIBEAULT,  
(Sgd.) W. A. SUTHERLAND,  
(Sgd.) J. A. NOEL.

On behalf of the Company,  
(Sgd.) A. V. GALE.

Witness:  
to employees' Signatures  
(Sgd.) W. F. O'CONNOR,  
(Sgd.) H. P. HILL.

## SUMMARY OF PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THE tables presented below summarize the proceedings under the Industrial Disputes Investigation Act for the fiscal year ending March 31, 1933, and from March 22, 1907, to March 31, 1933.

The proceedings under the Act during the fiscal year 1932-33 include six cases in which

TABLE I.—PROCEEDINGS BY INDUSTRIES FROM APRIL 1, 1932, TO MARCH 31, 1933

## STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1933

THE following table shows the number of disputes, workers involved and time loss for June, 1933, as compared with the previous month and the same month a year ago.

| Date            | Number of disputes | Number of employees involved | Time loss in working days |
|-----------------|--------------------|------------------------------|---------------------------|
| *June, 1933.... | 14                 | 3,249                        | 34,834                    |
| *May, 1933...   | 16                 | 1,542                        | 11,927                    |
| June, 1932...   | 16                 | 4,006                        | 40,186                    |

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded for June was slightly less than that shown for May, 1933, but owing to a dispute involving 1,300 pulpwood cutters in Northern Ontario, with a time loss of 18,000 working days, the number of workers involved and the time loss incurred showed a substantial increase over that recorded during the previous month. As compared with June, 1932, a slight decrease occurred in the number of disputes recorded, the number of workers involved and the time loss incurred showing a similar decline.

Six disputes, involving 491 workers, were carried over from May, and eight disputes commenced during June. Of these fourteen disputes, twelve were terminated during the month, four being in favour of the workers involved, four in favour of the employer concerned, and compromise settlements were reached in four cases. At the end of June, therefore, there were two disputes in progress recorded as strikes or lockouts, namely: electrical workers, Hamilton, Ont., and hosiery factory workers, Hamilton, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that

employment conditions are no longer effected, but which the unions concerned have not declared terminated. Information is available as to seven such disputes, namely: photo engravers, Toronto, Ont., commencing March 23, 1931, one employer; photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Winnipeg, Man., February 28, 1932, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; lithographers, Toronto, Ont., April 15, 1932, one employer; motion picture projectionists, Saint John, N.B., March 6, 1933, one employer; and composers, Winnipeg, Man., March 13, 1933, one employer, this last being added this month. The disputes involving composers employed by one firm in Regina, Sask., commencing November 21, 1931, and motion picture projectionists employed by three firms in Toronto, Ont., commencing February 6, 1933, carried in this list for some months, are considered to have lapsed and have consequently been removed from the list.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which some work is performed or may be required, are not included in the record, as no relation of employer and employee is involved.

A cessation of work by loggers at Hillcrest, B.C., on May 12, 1933, was noted in the June issue of the LABOUR GAZETTE, definite information not having been received. Reports from the parties involved show that some sixty employees ceased work, chiefly riggers, donkey engineers, loaders, etc., 250 other employees being indirectly affected. Wages for these classes were between \$1.80 and \$4 per day, and they demanded a scale between \$2.25 and \$4.50. On May 15 work was resumed on the undertaking of the employer that wages would be increased later if business should warrant it.

A minor dispute involving employees engaged in the construction of a building at Sackville, N.B., on June 15, 1933, has been reported, about twenty men ceasing work for a few hours to secure an increase in wages above the rate of 15 cents per hour for labourers. The work being for Mount Allison University, the Maritime Conference of the United Church of Canada, in session there, had appointed a committee to inquire into the wages paid and recommended to the contractor that rates should be raised. The contractor had agreed to give a preference in employment to those on the town relief list, increasing the

| <b>TRANSPORTATION—</b><br><i>Water—</i><br>Longshoremen (coal trim-<br>mers), Montreal, P.Q.....                                       | 300                                 | 750                                | Commenced June 19, 1933; against reduction in<br>wages; terminated June 21, 1933; compromise.  |

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

\*\*Bricklayers and masons reported on strike in the June issue of the Labour Gazette, worked under protest.

rate after some days' trial, but a number of these refused work at this rate and picketed the job. It being ascertained that an increase to twenty cents per hour was about to be made, the men resumed work.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**FISHERMEN (SALMON), VANCOUVER ISLAND, B.C.**—The workers involved in this dispute, on strike since May 16, 1933, in sympathy with fishermen in the U.S.A., Oregon and Washington, resumed operations on June 16, 1933. The latter had ceased work on May 1, 1933, to secure an increase in the rates paid to fishermen for spring salmon, which is marketed fresh or stored. The fish caught in Canada are marketed extensively in the United States. It is stated that no changes in rates or conditions were demanded for the Canadian fishermen. An advance of two cents per pound was secured by the American fishermen and this may later be reflected in Canada.

**COAL MINERS, DRUMHELLER DISTRICT, ALTA. (WAYNE & EAST COULEE)**—This dispute, commencing April 24, 1933, arising out of a reduction in wages in a number of the mines in the district surrounding Drumheller, is recorded as having lapsed by June 30, employment and mining conditions being no longer affected, most of the mines involved being engaged only in development work during the summer.

**COMPOSITORS (JOB OFFICE), WINNIPEG, MAN.**—This dispute, an alleged lockout involving compositors in one establishment, owing to a reduction in wages, commencing on March 13, 1933, is recorded as terminated, the employees having been replaced some time ago, and employment conditions being no longer affected is transferred to the list of such disputes not called off by the unions affected.

**BUILDING TRADES WORKERS, HALIFAX, N.S.**—As stated in the June issue of the *LABOUR GAZETTE*, this dispute, which had commenced May 1, 1933, against a reduction in wages, was terminated on June 6, a compromise settlement being reached by agreement between the employers and the electrical workers, the trade chiefly involved, while the other trades are reported to have continued to work under protest. The bricklayers' union, however, have declared a strike but practically no work is reported to be in progress. The electricians' agreement is given elsewhere in this issue.

**PLASTERERS, ETC., HAMILTON, ONT.**—The plasterers involved in this dispute, com-

mencing May 1, 1933, in connection with a reduction in wages from \$1 per hour to 90 cents, returned on June 9 at the decreased rates proposed by the contractors, as noted in the June issue of the *LABOUR GAZETTE*, having reached an agreement with the master plasterers. The bricklayers, masons and tile setters continued to work under protest, there being very little work in progress and only four employed, and the dispute was settled by an agreement on June 14, providing for 90 cents per hour for bricklayers and masons and 80 cents per hour for tile setters, a reduction of 20 cents per hour in each case.

**ELECTRICAL WORKERS, INSIDE WIREMEN, HAMILTON, ONT.**—The dispute involving employees of eight firms, commencing May 15, 1933, was reported unterminated at the end of June, only two of the firms involved having settled with the union at a rate of 85 cents per hour, a reduction of 10 cents per hour, the contractors having proposed a reduction to 75 cents.

**PULPWOOD CUTTERS, ONION LAKE, ETC., ONT.**—On June 5, 1933, some seven hundred pulpwood cutters, some of whom were members of the Lumber Workers' Industrial Union of Canada, employed by one firm in the Onion Lake region, ceased work to secure an increase in wages (piece rates) from \$2.50 per cord to \$3 for peeled pulpwood with a decrease in rates for board from between 85 cents and \$1 per day to 70 cents, and for the recognition of camp committees. Objection was also made to the employment contract signed by each worker regarding any violation of contract, participation in strikes, etc., as well as to deductions from pay for certain camp expenses. During the week the dispute spread to camps of other employers in the Nipigon district, bringing the number involved to approximately 1,300. The timber contractors early in the dispute offered a rate of \$2.75 per cord with board at 75 cents a day but this was not accepted by the strikers. The provincial minister of lands and forests and the member of the provincial legislature for Port Arthur, together with the Mayor and city officials of Port Arthur, conferred with representatives of both parties for several days with the result that on June 21 work was resumed, an agreement having been reached providing for a rate of \$2.75 per cord for peeled spruce pulpwood, 75 cents being deducted for board, while concessions as to camp committees and certain other points were made by the employers.

**COAL MINERS, INVERNESS, N.S.**—A cessation of work by coal miners at Inverness, N.S., from about June 10, 1933, to June 22, 1933, has

been reported, and while full particulars have not been received, it appears that the miners demanded the resignation of the board of directors and that following conferences of the parties with the provincial Deputy Minister of Mines and later with the Premier of Nova Scotia, this was arranged. The mine has been operated for the past year by a co-operative company, after being in receivership for some years, after which the mine finally reverted to the province (LABOUR GAZETTE, September, 1932, page 947). In February, 1933, wages were reduced by ten to fifteen per cent, the mine continuing to be operated at a loss.

**COAL MINES, SOUTH MINTO, N.B.**—Twenty coal miners employed in one mine at South Minto, N.B., ceased work on June 20, 1933, in protest against a reduction in piece rates from 31 cents per box of coal to 25 cents. The strikers returned to work, however, at the reduced rates on June 22, 1933.

**CANNING FACTORY WORKERS, ST. CATHARINES, ONT.**—Fifty women employed in one canning factory ceased work demanding an increase in the wage rate of 15 cents per hour. Pickets were placed about the plant and it is reported two women were arrested as a result of a disturbance. The Mayor of the city intervened in the dispute and a settlement was reached providing for an increase to 17½ cents per hour and operations were resumed on June 19.

**KNITTING FACTORY WORKERS, HAMILTON, ONT.**—Knitters in the full-fashioned hosiery department in a knitting factory ceased work on June 19, 1933, as a result of the introduction of a new system of work and wage payment. The employees claimed that this was a speed-up system requiring them to do in sixty minutes work that was formerly done in eighty minutes, involving one man tending three machines instead of two, and reducing earnings. In a conference with the strikers, the management offered to guarantee earnings of each employee during the next four weeks up to his average during the first five months of the year and it was expected that earnings would average ten to twenty-five per cent more than before and that men displaced would be given positions elsewhere in the factory if possible, a conference to be held after four weeks to discuss any objectionable features. This was refused and on June 21 about five hundred employees in six other departments ceased work demanding the abolition of this system. This had been introduced into their departments in December, 1932, as a result of which the employees ceased work demanding its abolition but returned to work on the understanding that the

system would be tried out for a few months and adjustments made. The management claim that the results had been satisfactory but the employees now claim that it resulted in intolerable conditions of speeding-up and reduced earnings considerably but greatly increased output. As a result of the strike operations at the factory were practically suspended for a few days and the management stated that it would be necessary to close the plant and carry on the work in its factory in Woodstock. The mayor of the city requested the assistance of the Department of Labour and a conciliation officer met the parties to the dispute separately at Hamilton on June 29. The strikers refused to withdraw their demand for the abolition of the system and the management stated that under no circumstances would they enter into any discussion of the abolition or change in the system but would agree to some other demands including the formation of a grievance committee and the eight hour day. Both parties refused to refer the dispute to a Board under the Industrial Disputes Investigation Act. No settlement, therefore, was reached and at the end of the month the dispute was unterminated. Early in July it was reported that several of the departments at Hamilton were operating and that the work of other departments was being carried on at Woodstock by employees of the Hamilton factory willing to resume work.

**SAWMILL WORKERS, DURIU DISTRICT, B.C.**—Loggers and millworkers, members of the Lumber Workers' Industrial Union of Canada, employed in two mills operated by one firm near Durieu, B.C., on June 6, 1933, ceased work, demanding an increase in wages of 5 cents per hour, the rates paid being stated to be from 15 cents to 35 cents. The plant was picketed by the strikers but it is reported that work was resumed by June 17, 1933, the workers securing an increase of 2½ cents per hour.

**PILE DRIVERS, NEW WESTMINSTER, B.C.**—On June 5, 1933, ten bridgemen, pile drivers, etc., members of the United Brotherhood of Carpenters and Joiners (Pile Drivers, Bridge, Wharf and Dock Builders), ceased work in protest against a reduction in wages from 90 cents per hour to 75 cents. Work was resumed the next day, however, at the 90 cent rate.

**LONGSHOREMEN (COAL TRIMMERS), MONTREAL, P.Q.**—Coal trimmers employed by three companies ceased work on June 19, 1933, in protest against a reduced wage scale in effect from the beginning of the navigation season about April 1. An agreement between the longshoremen's union and the shipping companies in Montreal for the 1933 season had not been reached and the dispute was referred

to a Board of Conciliation and Investigation under the Industrial Disputes Act, the report of the Board appearing elsewhere in this issue. The shipping companies had announced rates approximately ten per cent below those under the agreement for the 1932 season, and it was arranged that these rates would be paid until the Board reported when the new scale would be retroactive to the beginning of the season. The sittings of the Board began early in May and the report was released to the parties involved on June 21st, a scale five per cent below that for 1932 being awarded and accepted. While the coal trimmers were not under this agreement their rates were on the same basis and the coal companies had put into effect a ten per cent reduction. The coal trimmers worked at the reduced rates pending negotiations which were to follow the issue of the Board's report, but by June 19 refused to delay further and ceased work demanding the 1932 rates for coal trimmers and an in-

crease to the 1931 rate of 40 cents per hour for dock hands, yardmen and labourers. The coal trimmers are reported to have seceded from the longshoremen's organization, the Association of the Syndicated Longshoremen of the Port of Montreal, an independent union, and formed another independent union, the National Independent Union of Longshoremen of the Island of Montreal. Negotiations between the strikers and the coal shippers were carried on during the strike and a settlement was reached and work resumed on June 21. It was agreed that the rates for coal trimmers, etc., for 1933, should be 69 cents per hour for day work, 80 cents per hour for time from 6 p.m. to midnight, and 85 cents per hour from midnight to 6 a.m.; for dockhands 36 cents per hour, these being the same rates as in 1932 except for day work for coal trimmers, the rate for which was 70 cents per hour in 1932.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1933, in the review of Strikes and Lockouts in Canada and Other Countries, 1932. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the Government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in May was 32 and 8 were still in progress from the previous month, making a total of 40 disputes in progress during the month, involving 7,800 workers with a time loss of 54,000 working days for the month. Of the 32 disputes beginning in May, 8 were over proposed reductions in wages, 8 over other wage questions, 8 on questions respecting the employment of particular classes or persons, 3 on other ques-

tions of working arrangements and 5 on questions of trade union principles. Settlements were reached in 30 disputes, of which 8 were in favour of workers, 13 in favour of employers and 9 were settled by compromise; in one other dispute, work was resumed pending negotiations.

### New Zealand

For the year 1932, the number of disputes reported was 23, involving 67 firms and 9,335 workers with a time loss of 108,528 working days and a wage loss of approximately £105,715. Nearly 90 per cent of the time loss occurred in the coal mining industry.

### United States

Revised figures for the year 1932 show the number of disputes beginning in the year as 808, involving 242,826 workers, with a time loss of 6,462,973 working days for the year. Of the 808 disputes beginning in the year, 525 were over wages questions, 101 over recognition of unions and the remaining 182 over various other questions. During the year settlements were made in 817 disputes, of which 353 were in favour of employers, 218 in favour of employees and 218 were settled by compromises. In the other 28 disputes, the results were either unclassified or not reported. The industries in which the greater number of workers were involved were as follows: the clothing industry with 157 disputes in-

volving 71,461 workers; the building industry with 199 disputes and 58,051 workers; the coal mining industry with 57 disputes involving 47,478 workers; the textile industry with 92 disputes involving 20,563 workers.

The number of disputes beginning in April, 1933, was 43 and 49 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 14,357 and the time loss for the month was 317,289 working days.

Most of the salmon fishermen of the trolling vessels of the Columbia River who were mentioned in the last issue of the LABOUR GAZETTE as being on strike since May, returned to work during June, when a compromise was reached as to the prices for fish, and arrangements made for joint committees to meet from time to time to discuss prices and other conditions. The settlement of the sympathetic strike of British Columbia fishermen is reported in the previous article of this issue.

## COMBINES INVESTIGATION ACT

### Prosecution of Alleged Coal Combine in Province of Quebec

**A**NNOUNCEMENT of the appointment of Mr. L. S. St. Laurent, K.C., to take action against the principal importers of British anthracite coal in the province of Quebec was made by Premier L. A. Taschereau, as Attorney General of the province, on June 23. The announcement indicated that the companies to be prosecuted as members of an alleged combine included the Canadian Import Company, Limited, the F. P. Weaver Coal Company, Limited, Hartt and Adair Coal Company, Limited, and the Scotch Anthracite Coal Company of Canada,

Limited, all of Montreal. It was stated that the defendants, if committed for trial, would probably appear before the Criminal Assizes at the October term.

The conclusion of the investigation under the Combines Investigation Act which led to the prosecution was reported in the LABOUR GAZETTE, May, 1933, page 500. The greater part of the investigation was conducted at the city of Montreal, the principal centre for the importation of British anthracite coal into Canada.

## OLD AGE PENSIONS IN CANADA

### Statistical and Financial Summary of Administration as at March 31, 1933

**T**HE accompanying tables give particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156; as amended by statutes of 1931, chapter 42) and the various provincial concurrent Acts, during the first quarter of 1933, and since these Acts became severally effective. A financial summary was given in the May issue of the LABOUR GAZETTE, bringing the information down to the end of March, 1933. This table has been revised in the light of later information and appears in the present article as Table I. The text of the Old Age Pensions Act was given in the issue for April, 1927, page 375. The Act made provision for the establishment of a Dominion-Provincial pension system to be effective in such provinces as might enact and give effect to special legislation for this purpose. The provinces participating in Old Age Pensions during the period of this report were British Columbia, Alberta, Saskatchewan, Manitoba, and Ontario. The Northwest Territories are also within the scheme. It is

understood that the Province of Prince Edward Island will participate as from July 1, 1933. The New Brunswick legislature passed an Old Age Pensions Act at its session in 1930, to become effective on its proclamation by the Lieutenant Governor in Council; while in Nova Scotia an Act providing for the participation of that province in any federal scheme was passed at the session of 1931, to take effect on proclamation.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds \$125 a year;

and in cases where a pensioner has during part of the twenty years immediately preceding the date of the proposed commencement of pension resided in a province where the Act is not in force, the pension payable is reduced by the same proportion as the duration of the pensioner's residence in these provinces bears to twenty years. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments.

Under the provisions of the Act as it was first passed the Department of Labour of

Canada paid quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty per cent to seventy-five per cent of the total expenditure, effective from November 1, 1931. Accordingly new agreements were made between the Dominion and Provincial Governments under the provisions of the amending Act (LABOUR GAZETTE, May, 1932, page 517). That issue also contained the text of the Old Age Pensions regulations, as revised.

### Health Insurance in the Irish Free State

A bill providing for the establishment of a single national society to administer health insurance in the Irish Free State was adopted recently by the Dail. Previously there were 83 administrative units, having 450,000 insured persons, the membership in these units varying from 90 to 9,000. It is expected that unification will result in rendering the whole scheme solvent. The bill provides for the creation of a unified health insurance society, which shall take over the members, assets and liabilities of all the existing societies. The new society would be administered by a committee of management of 15 members: nine being elected by the insured persons, three being employees' representatives appointed by the Minister, and three trustees similarly appointed. The constitution differs therefore from that of the present societies, which are, with few exceptions, administered solely by representatives of the insured persons.

A committee appointed by the Irish Government a year ago to study the possibility of establishing a scheme of widows' and orphans' pensions has just decided to recommend a scheme of a non-contributory character, similar to those in several provinces of Canada and in Denmark and New Zealand. A detailed report will be issued later.

The Central States Co-operative League (U. S. A.), at a recent convention, appointed a committee to prepare a plan for affiliating co-operative societies of the unemployed. It was decided to encourage the organization of such societies in connection with every co-operative society in the area covered by the League. Some account of the co-operative movement among the unemployed in the United States was given in the LABOUR GAZETTE, April, 1933, page 366; October, 1932, page 1039, etc.

## RECENT LEGISLATION FOR INDUSTRIAL RECOVERY IN THE UNITED STATES

A LIST is given below of the measures adopted at the session of the United States Congress which opened on March 9 and adjourned on June 16, in furtherance of the policies favoured by President Franklyn D. Roosevelt for restoring prosperity in the United States (This summary is based mostly on an article on the "Roosevelt Legislative Record," which appeared in *The Nation* (New York), June 28, 1933).

The Emergency Banking Relief law gives the President power to regulate transactions in credit, currency, gold and silver, and foreign exchange, and authorizes the Secretary of the Treasury to call in all gold and gold certificates in the country. It also makes provisions for safeguarding the banking system.

The Economy Act authorizes the President to reduce Civil Service salaries and veterans' pensions to the estimated amount of \$500,000,000.

The Beer and Wine Revenue law legalizes the production of beer and wines with alcoholic content not exceeding 3·2 per cent by weight, and provides for the payment of an annual permit tax of \$50 each by wholesalers and \$20 each by retailers of these beverages.

The Reforestation Unemployment Relief law gives the President power to provide employment in public works connected with reforestation, forest fire prevention, flood control, soil erosion, plant pest and disease control, and other work in the public domain as the President may determine, provision to be made for housing the workers and supplying them with subsistence, medical attendance, and cash allowance while they are employed.

The Inflation Farm Relief law authorizes the Secretary of Agriculture, for the purpose of increasing prices of farm products, to allocate the production of certain crops, and to lease land for the purpose of withdrawing it from production, the cost of this relief to be met by taxing processors of agricultural products. It also provides for the issue of \$2,000,000,000 in government bonds for refinancing farm mortgages at 4½ per cent interest, the government guaranteeing the interest, but not the principal, of the bonds. The law further authorizes an expansion of Federal Reserve credit to the amount of \$3,000,000,000 by the purchase of government securities in the open market, and the issuance of a maximum of \$3,000,000,000 in Treasury notes secured solely by the credit

of the federal government. It also empowers the President to reduce the legal gold content of the dollar in any proportion up to 50 per cent of the present gold content; and to accept silver to a total amount of \$200,000,000 in payment of war debts for six months after passage of the act, the price of the silver not to exceed 50 cents an ounce.

The Emergency Relief law (the Wagner-Lewis bill) authorizes the Reconstruction Finance Corporation to make available out of its funds the sum of \$500,000,000 for emergency-relief purposes, the money to be spent under the direction of a federal emergency-relief administration created by the act. A portion of the fund is set aside for allocation to the several States on a basis of need, and the remainder is to be distributed to the States according to population.

The Muscle Shoals and Tennessee Valley Development laws set up the "Tennessee Valley Authority," which is to maintain government-owned properties, improve navigation and control the flood waters of the Mississippi and Tennessee Rivers. It enables the Authority to distribute electrical power in the event of private utility companies refusing to protect the interests of consumers.

The Security Act (said to be based on British Companies Act) provides for widest publicity in connection with issuance of securities sold in interstate commerce or through the mails, and makes issuers liable to criminal prosecution for false information.

The Employment Service law (the Wagner bill) provides for co-operation between the federal government and the States through the creation in the Department of Labour of a bureau to be known as the United States Employment Service. The director of the bureau is to be appointed by the President with the consent of the Senate. The bureau is charged with the task of co-ordinating the activities of the State employment services and of assisting States in establishing such services. The act authorizes an annual appropriation of \$4,000,000, of which \$3,000,000 is to be distributed to the States for the purpose of assisting them to establish and maintain their employment bureaus.

The Home Mortgage law authorizes the issue of two billion dollars in bonds by a home-owners loan corporation, the bonds to be exchanged for mortgages. The bonds will bear government-guaranteed interest of 4 per cent, but the loan corporation is to collect 5 per cent interest from the home-owners.

The owners must amortize their loans within fifteen years. In cases where mortgage holders refuse to exchange their mortgages for bonds, the home-owners may borrow from the loan corporation up to 40 per cent of the value of their properties and reduce their indebtedness to that extent. Cash loans up to 50 per cent of the value of homes to fund small debts against such properties are provided for, while the act also authorizes limited loans to enable persons to recover dwellings they may have lost by forced sale or foreclosure within the last two years. This home-owners' loan corporation is to have a capital of \$200,000,000, which is to be provided by the Reconstruction Finance Corporation.

The Emergency Railroad Transportation Act provides for the appointment by the President, with the consent of the Senate, of a Federal Co-ordinator of Transportation, whose duties will be to encourage or require railroad companies to avoid waste and preventable expense, to promote financial reorganization of railroads, to improve railroad credit and reduce fixed charges to the extent required by "public interest," and to study ways and means of improving the general status of the carriers. The anti-trust laws may be set aside when necessary to carry out the co-ordinator's decisions. The railroads are to set up committees to work with the co-ordinator, and will be assessed at the rate of \$1.50 a mile to meet the expenses which will be incurred under this law. The Act provides that the number of employees in the service of a railway shall not be reduced by any action taken under its provisions, below the number on the payrolls in May, 1933 (allowance being made for reductions by death, normal retirement, etc. Such reductions not to exceed 5 per cent of the employees). The act requires the Federal Co-ordinator to establish regional boards of adjustment for the settlement of labour disputes in the manner provided by the Railway Labour Act, and also provides for compensation to employees for property losses and expenses imposed upon them by reason of their transfer from one place to another incidental to carrying out the terms of the act.

The National Industrial Recovery Act empowers the President to promote the self-regulation of industry under federal supervision with a view to regulating competition, curtailing over-production, improving wages, and shortening hours of labour. The law provides for the formation of trade and industrial associations which are to draw up "codes of fair competition" by which they are to govern themselves. Such codes must be submitted to the President for his approval.

The President is authorized to work out such codes on his own initiative for industries where no action is taken. He is further empowered to licence industries for the purpose of enforcing the codes. The right of collective bargaining is guaranteed to labour, and the workers are also secured in their right to maintain their own unions. The second title of this law authorizes a \$3,300,000,000 bond issue to finance construction of federal, State, and local public works, and such private projects as may benefit the public generally, for the purpose of creating employment. The office of Public Works Administrator is established. This official is charged with the administration of the federal public-works program, and is empowered to make grants to States and municipalities for construction and improvement projects up to 30 per cent of the cost of labour and materials.

In addition to the foregoing measures originated by the administration, the Congress enacted the "Glass-Steagall" banking law, which was approved by the President. This measure provides for government insurance of bank deposits up to \$2,500 (this section to become effective January 1, 1934); curbs the use of Federal Reserve credit which may be used in stock-market speculation; requires national banks to divest themselves of their security affiliates; legalizes branch banking by national banks within the States in which such banks are located, but only in States where the branch-banking privilege is accorded to State banks; increases the authority of the federal government over the management of banks that are members of the Federal Reserve system; and establishes a method for quick liquidation of assets for the benefit of depositors in banks that have failed.

### Plan of Recovery Act

Shortly after the passage of the National Industrial Recovery Act the President appointed General Hugh S. Johnson as recovery administrator. General Johnson explained the purpose of the Recovery Act in a speech which was broadcast over the radio throughout the United States on June 25. He analysed the factors that enter into an industrial depression, and proceeded as follows:—

"The whole thing simmers down to the job of keeping the purchasing power of workers in step with the price and quantity of the things they make. Wages, prices, and production—these are the three causes of good or bad times and if we could keep all three in line we wouldn't have so much trouble. What have we done to keep them in line? We have done precious little. . . .

"We have had many periods of prosperity. The trouble was that it wasn't evenly enough spread over the country. Too much of profit went back to build new factories and too little went to let people buy the products of the factories we already had. That was bad both ways. It produced too much and it consumed too little. Also, too great a share of prosperity went to too few people. As long as human beings are what they are, one man will earn more than another. But there must be a limit to this if we are to keep our country going.

"Just because a man has a million dollars he doesn't actually consume very much more than a man with a thousand dollars. The very rich do not buy forty dollars worth of ham and eggs for breakfast. If we want to keep our country going we have got to find a way to let everybody buy a half dollar's worth of ham and eggs.

"Like a great many of the President's ideas, this plan seems too simple and direct to argue about. The way to work out factories and farms is to see to it that people who work get enough for their labour to buy what they need of the labour of others.

"Well, how are we going to do that now, with 12,000,000 out of jobs and not enough business to hire any more men? The answer of the Roosevelt plan is: split up the existing work to put more men on the payroll and raise the wages for the shorter working-shift so that no worker is getting less than a living wage.

"That also seems too simple to argue much about. But some employers say, 'I can't pay out more in wages—I am losing money now. If I pay more, my goods will cost more and my competitors will undersell and ruin me.'

"Now, if we only look at one employer, that is absolutely true. But it is absolutely not true if all employers would do exactly the same thing at exactly the same time. Theoretically, if we would pull together, we could do this job to-morrow, and if we did it to-morrow that would be the end of this depression. . . .

"The Recovery Act had to be passed for two reasons—one, that it was actually unlawful for all employers to do the same thing at the same time and, two, that even after you have made that lawful, you have to have a practical method for all employers to act together and you have to have some leadership which they can follow freely in the doing of it.

"The President has set up machinery for this great co-operation, and it is wholly unnecessary for me to say that this country is under one leadership in him to an extent that

has probably never happened in any country, anywhere, any time. In other words, the whole setting is ready, and it is now up to our people to perform. No law and no government can do that for them and American industry has got to save itself.

"So much for the underlying idea of what we are trying to do here. What employers of the country want to know is how they can go about joining what the President called a great national team for victory over this depression. Well, the team is pretty well organized in this country already. Nearly every principal employer belongs to what is called a trade association. These associations were mostly formed long ago for what mutual help the members could get by agreements within the law.

"They were not very strong under the old law but the new one makes them highly important. They are almost a part of the government and they can do and agree to many more things than they could ever before. First and foremost among those things is a contract to divide up the existing work in such a way as to put hundreds of thousands of new names on the payroll and then raise the wage scale high enough to give all workers a living wage for the shorter shift.

"If they do this, buying will move forward on a rapid scale, and that in itself will put many more men back to work. Their own profits will come back and we shall be on our way back to the kind of a country that we knew in happier years.

"If that were all there is to it it would be simple, but there is more to it. In the first place the tendency of higher wages is higher prices. If we do a thing like this and do not also put some control on undue price increases so that prices will not move up one bit faster than is justified by higher costs, the consuming public is going to suffer, the higher wages won't do any good, and the whole bright chance will just turn out to be a ghastly failure and another shattered hope.

"This does not mean selling below cost. The first effect of this plan will be to increase business and bigger business is a better way to profit than is higher price.

"This is a deadly serious matter—this danger of runaway prices. There are still about 12,000,000 unemployed in this country and even those who still have jobs are largely on much reduced incomes. Any wild-cat price lifting will have its first bearing directly on the very creature necessities of these unfortunates—their means to keep out hunger, thirst and cold.

"This administration simply will not stand for that and we do not expect to have any

trouble about it. Our best people understand that this is no time to get rich quick. It is the time to pull our country out of a hole. We need every good man on the ropes and nobody is going to do a thing that makes him a peace profiteer by taking advantage of the patriotic unselfishness of his fellows.

"Again, in order to get this kind of co-operation among so many people, we must keep each of the many employers' agreements in harmony with all the rest and this also requires them to strain through some central sieve.

"This central sieve is the National Recovery Administration. Its job is principally to advise in the preparation of plans by industry: to receive those plans; to examine them in the public interest; to insure by fair and impartial hearing that every one who fears harm from them can state his case; to study them in relation to the general plan; to see whether they go too far or do not go far enough; to suggest any necessary changes and then to take them to the President for his action.

"After such a plan has been approved it becomes a sort of law merchant for the industry submitting it and thereafter it is the duty of the administration to watch its execution. . . .

"In a sense, all our industries compete with each other and each has an interest in the plans of all. All of industry, therefore should have its say as to the plans of any industry and the general plan for all.

"For this reason the President has created an Industrial Advisory Board. As an impartial umpire, it would not be appropriate for the administration to name or control this board, or for this board to control the findings of the administration. Secretary of Commerce Roper has therefore appointed this board.

"He has selected industrial leaders—not primarily on a basis of regions or of kinds of business, but rather on a basis of leadership, liberality and experience and in an effort to see that we have the point of view of the larger as well as the smaller business groups. This board will advise from the viewpoint of industry. It is responsible that industry at large is properly represented at every hearing.

"Labour is also vitally interested here—and the word labour means all labour, organized as well as unorganized. It has a stake in every agreement and every hearing. For exactly the same reason that the Secretary of Commerce appointed the Industrial Advisory Board, the Secretary of Labour appointed the Labour Advisory Board, and, in the same way, she has sought to assemble every pertinent point of view. Like the Industrial Advisory Board, it counsels, but it neither controls nor is controlled by the decisions of the administration.

"While the administration itself is directly responsible for safeguarding the public welfare and effectuating public policy, the actual consumers' interest is a matter of primary and acute concern. If that is not watched—at all times and from every angle—the whole plan may be imperilled. To provide against this, the administration itself has chosen a Consumers Advisory Board, which is responsible for watching every agreement and every hearing to see that nothing is done to impair the interest of those whose daily living may be affected by these agreements.

"The thought in choosing this board was to get wide regional representation by devoted people who have interested themselves in this problem and are willing to give their time and effort to this vital work.

"The machinery the President has thus set up is a balanced sort of executive-legislative-judicial tribunal. It is not a bureau and will not become one. It is rather a forum of co-operation. It will duplicate no existing government machinery. It has the active and vital guidance, co-operation and support of every government department and on its board of directors sets every Cabinet officer whose department is affected or can help.

"This board is presided over by the Secretary of Commerce, but, in the normal business sense, the Chairman of this great board is the President himself. Neither that board nor any of the advisory boards is a 'scenery' board. This whole government is uniting and extending every effort to make this plan a success."

---

At the annual convention of the Ontario Retail Druggists' Association held at Toronto, early in June, the president, Mr. H. W. Shoemaker, referred to the advent of the idea of state medicine in Canada. "Whether we like it or not," he said, "state medicine is coming. We had rather expected the Dominion Parliament would pass some such legislation, and we had a committee appointed to furnish us with facts with regard to similar legislation in Great Britain and foreign countries. It appears now that the scene has shifted to provincial centres so far as state medicine is concerned." It will be recalled that the Prime Minister announced in the House of Commons in 1931, that the subject of health units would be brought before a future conference of the Dominion and Provincial Governments (LABOUR GAZETTE, April, 1932, page 381). The progress of this movement in various provinces has been noted in recent issues May, 1933, page 509, 563; March, 1933, page 254; March, 1932, page 289, etc.).

## Industrial Relations in Ontario Paper Company, Limited

An account of the organization of the various departments of the Ontario Paper Company, Limited, of Thorold, appears in the current issue of *Pulp and Paper in Canada*. This company is stated to be attracting much attention "because of the admirable condition it is in to-day as the result of wise direction. It is, and has been, as a matter of fact, a company with policies that might well be regarded as exemplary."

### Employment Department

This department operates on well-defined policies as laid down by the management and all relations between the Ontario Company and its employees are concentrated in this Department. No one is engaged, transferred, promoted, or discharged except through this medium, which acts as a clearing house for these activities. The employment policies are as follows:—(1) To consider the interests of the employees, as well as those of the Company, and to give fair and considerate treatment to each and every employee; (2) Select employees carefully and assign them as nearly as possible to work for which they are suited by aptitude, education and training; (3) Pay fair wages; (4) Work reasonable hours; (5) Endeavour to provide steady employment; (6) Provide safe and healthful working conditions; (7) Recognize exceptional work and encourage promotion within the organization; (8) Protect employees from unjust discharge; (9) Provide competent supervision; (10) Give careful and honest consideration to any grievances and provide means by which these questions may be brought before the Management; (11) Encourage suggestions; (12) Co-operate with employees in handling all matters pertaining to insurance, benefit associations, relief, education, recreation and similar activities; (13) Create a working partnership and real spirit of co-operation between the Company and its employees.

### Safety First Department

The combined results of the safety first and first aid departments has been to reduce the number of lost time accidents from 160 in 1930 to 90 in 1931 and a further reduction to 64 in 1932.

The first step in the campaign against accidents was the installation of one main display board located at the time office main entrance to the plant, a sub-main display

board located at the entrance to the mill from the office and ten single display boards located at strategic points in each department throughout the mill for the display of photographic and educational literature. These educational displays cover bulletins on accident prevention, waste of materials, progress or improvement, daily news events, executive letters and notices. Every effort is made to guard the employees from moving machinery injuries by properly guarding the dangerous points.

Working in conjunction with the safety first department there is a very efficiently operated first aid department. All employees are ordered to report to the first aid room for attention to all accidents although they may be very minor. All patients are dressed daily and again when going off shift or dressings are provided for home use. This procedure has proven effective in keeping infections at zero for years. Employee absentees are reported by the foreman of each department to the time office at the same time he turns in his daily time sheets. The nurse is then able to visit all homes of men reported absent for industrial accidents or non-industrial accidents. Public health talks and advice are given daily to employees who visit the first aid room by the nurse. If requested by an employee the nurse will attend sickness or injury of member of family resulting from accident at home. Social service relief problems of employees of the company are handled by the nurse.

Silicosis was the subject of a special discussion by scientists from Great Britain, Canada and the United States in connection with the 29th annual meeting of the National Tuberculosis Association, which was held at Toronto in June. Dr. A. R. Riddell, of the Ontario Department of Health, stated that the only effective treatment was removal from exposure, which in most cases meant a change of occupation. "Silicosis is relatively common," he said, "it may play an important role in the general spread of tuberculosis. This possible source of infection has not received the attention it merits, as it is too often not considered infectious. But we have found on investigation as great an amount of infection among the wives and children of silicotics as was disclosed among those in contact with ordinary tuberculosis."

## LABOUR LEGISLATION IN QUEBEC, ALBERTA, AND MANITOBA IN 1933

### Quebec

THE following is a brief summary of the laws of labour interest which were enacted by the Quebec Legislature during the session which opened on January 10 and closed on April 13, 1933.

#### Unemployed Aid

The Unemployed Aid Act, 1933, ratifies an agreement between the Government of Canada and the Government of the Province and vests in the latter all necessary powers for carrying it into effect. The agreement, which is reproduced in the schedule to the Act, provides for settling on the land certain families who would otherwise be on direct relief, and is similar to the agreement in the schedule to the British Columbia Unemployment Relief Act summarized in the May issue of the *LABOUR GAZETTE* at page 503. The Act further provides that the Lieutenant-Governor in Council may authorize the Minister of Public Works to make agreements with the Dominion Government and the municipalities of the Province for the relief of unemployment. The Unemployed Aid Act passed by the Provincial Legislature in 1931 (*LABOUR GAZETTE*, March, 1932, page 297) is to apply to the carrying into effect of the agreement regarding land settlement and all agreements relating to unemployment relief. As from May 1, 1932, the government of the Province may assume in whole or in part the payment of the contributory portion devolving upon a municipality for the cost of direct relief, and may also make such expenditure as it deems necessary to aid the unemployed, which cannot be included under the agreements in the claims to be addressed to the Government of the Dominion. As from the same date it is provided that when direct relief is a charge upon the Dominion, the Province and the municipalities, or upon the Dominion and the Province, the Lieutenant-Governor in Council may authorize the Provincial Treasurer to advance in whole or in part the sums necessary to pay the contributory share of the Dominion Government and that of one or more municipalities. Loans contracted before March 15, 1933, by the municipalities under the Unemployed Aid Act, 1930, the Certain Works Unemployed Aid Act or the Unemployed Aid Act, 1931, are validated. The Minister of Public Works is charged with the administration of the Act.

#### Return to the Land

An Act to Promote the Return to the Land was amended to enable the Minister of Colonization, on the authorization of the Lieutenant-Governor in Council, to purchase lots for the establishment of settlers at a cost not exceeding one hundred dollars per lot.

#### Hours of Labour

An Act respecting the Limiting of Working Hours, which came into force by Proclamation on June 10, 1933, empowers the Lieutenant-Governor in Council to fix the number of hours per week or per day during which a workman employed in manual labour may work.\* Such limitation is to be for such regions of the Province, such kinds of industry and works, such categories of workmen and for such terms and lengths of time as may be determined by Order in Council. The Act does not apply to the agricultural industry. No limitation of working hours may be decreed for industries or works which are subject to competition from other countries or provinces. The limit of working hours may not be less than six hours per day or thirty-three hours per week so that as far as possible work may be assured for two or more crews of workmen employed at the same work. Before the limitation of working hours is decreed, the employers' or workmen's associations, if any, must be consulted. The Order in Council may permit exemptions for preparatory, complementary or urgent work. An employer who permits a workman to contravene the provisions of an Order in Council under the Act is liable, in addition to costs, to a fine of not less than twenty-five dollars nor more than fifty dollars and, in default of payment, to imprisonment for not more than thirty days.

#### Workmen's Compensation

The Workmen's Compensation Act was the subject of a number of amendments. No compensation is payable for the first seven days of disability unless the workman is disabled for at least three weeks from earning full wages at the work at which he was employed. The minimum weekly payment to a widow or

\* An Order in Council relating to the hours of work in the building industry in the District of Montreal is given on page 701.

invalid widower with one or more children is reduced from \$12.50 per week to \$10 per week. The minimum compensation for total disability is also reduced from \$12.50 per week or the amount of weekly earnings to \$10 per week or the amount of weekly earnings. In the case of navigation, towing, operation of vessels, marine wrecking, etc., the responsibility of the owner of the vessel is limited to the maximum fixed by the Canada Shipping Act.

Those clauses were repealed which provided that the workman should be furnished with all the medical aid his case required, the cost being met by the employer or the accident fund, as the case might be, and giving the workman his choice of a physician. The clauses replacing them provide that medical aid shall be given, in all cases, under control of the Commission, which, in industries under Schedule I, must take necessary steps therefor and pay the cost from the Accident Fund. As to industries in Schedule II the employer is personally bound to provide medical aid and to pay the cost thereof. Should he fail to do so, upon decision of the Commission, medical aid given at the request of the workman or of any person for him or on the order of the Commission shall be at the employer's expense. Wherever possible the workman must be provided with a doctor speaking his language and must be consulted as to the choice of a physician. An amendment to the clause imposing a penalty up to \$50 upon an employer failing to report an accident to the Commission imposes the same penalty for deliberately furnishing false information. With regard to the homologation of a decision of the Commission by the Superior Court, it is now provided that the Court may also award its judgment with costs against the debtor.

Provision is made for greater latitude as regards the maintenance of the Accident Fund. Formerly the Commission was required to maintain the fund so that with the reserves, exclusive of the special reserve, it should always be sufficient to meet all payments in respect of compensation as they become payable. This is amended to permit the Lieutenant-Governor in Council to order otherwise. The English version of the Act is brought into line with the French version by the addition of the words "or demerit" to the clause permitting the Commission to adopt a system of merit rating. The section under which an employer who defaults in the making of returns or paying assessments is liable for the capitalized value of the compensation payable for an accident happening during de-

fault was amended to make him liable also for the cost of medical aid. A new section provides that an employer who is in default as to an assessment for more than one month and who continues to carry on an industry under Schedule I is guilty of an offence and liable to a penalty of not less than \$20 nor more than \$100 per day. That clause is repealed which provided that the privileged claim of the Commission on the property of an employer should not exceed, for a particular claim, the sum of \$1,000.

Occupational diseases due to employment in mining and quarrying are struck out, viz: ankylostomiasis, miners' phthisis, stone workers' and grinders' phthisis, silicosis and pneumoconiosis. The provisions of the amending Act do not apply to accidents happening before the date of its coming into force (April 13, 1933).

An amendment to the Civil Code provides that in cases covered by the Workmen's Compensation Act no recourse may be had at common law.

### Silicosis

The Silicosis Act, 1931, was repealed. This Act required that every person employed in the cutting, polishing or finishing of granite should have a medical certificate and that employers in such processes should provide their workmen with masks or with approved safety devices. The Lieutenant-Governor in Council was empowered to make regulations for the protection of workmen and to extend the Act and regulations to cover workmen engaged in the cutting, etc., of substances other than granite.

Sections dealing with silicosis which were added to the Mining Act in 1931 were also repealed. These required every workman employed below ground for more than fifty hours per calendar month to have a certificate to the effect that he was free from tuberculosis of the respiratory organs. Such certificate was to be issued by a medical officer appointed under the Workmen's Compensation Act and was to be renewed annually. A similar certificate was required in the case of workmen engaged in ore or rock-crushing operations unless the ore or rock was kept constantly moist. The Director of Mines might exempt any mine which did not contain silica in such quantity as to produce silicosis.

### Women's Minimum Wages

The Women's Minimum Wage Act was amended to provide that the Lieutenant-Governor in Council, on the recommendation of the Minimum Wage Commission, may

make regulations to compel employers to keep registers of the names, ages and places of residence of the girls and women employed by them, and also of the duration of each day's work of such girls and women, the wages they have received therefor and whether they are engaged by the day, by the hour, on piecework or otherwise. (The text of a regulation under this provision was given in the LABOUR GAZETTE, May, 1933, page 521.) The section providing a maximum penalty of \$100 for an employer who violates an order of the Commission as regards wages or hours of work is replaced by a section fixing a fine not exceeding \$50, in addition to costs, for infringement of any Order in Council under the Act and in default of payment a term of imprisonment of not less than one month and not more than two months.

### Electrical and Boiler Inspection

The Public Fire Protection Act was the subject of a number of amendments. The title was changed to "Electricians and Electrical Installations Act," and those portions relating to the inspection of boilers and pressure vessels were deleted, that section of the work having been taken away from the Electrical Inspectors' Department and a separate service created for it under the Pressure Vessels Act as outlined farther on. On the other hand the powers and duties of electrical inspectors were considerably enlarged. The definition of "public building" was amended to include industrial establishments, transformer rooms, and vaults, and also the installation of transformers on posts, etc., if situated on private property. Electrical installations of public buildings must be inspected annually. An inspector appointed under the Act is authorized to require the production of licences, and demand proof of compliance with the law, failing which he may stop the work and notify the Board of Examiners. These powers were formerly confined to the Provincial Police. The Lieutenant-Governor in Council may appoint a Board of Advisers to the Board of Examining Electricians, these advisers to represent corporations and associations interested in the electrical industry. The Lieutenant-Governor in Council may also establish the manner and duration of apprenticeship for electricians. A penalty is provided for a company, association, corporation or person refusing or neglecting to register every apprentice in its employ within thirty days following his entry into service. Provision is made for adding to the inspection staff a number of duly qualified journeymen electricians to inspect all build-

ings in the Province, make the law known to interested persons and report infringements. The provisions of the Act do not apply to miners governed by the Mining Act. Regulations made under the Public Fire Protection Act are continued in force.

The Pressure Vessels Act provides for the appointment by the Lieutenant-Governor in Council of a chief inspector of pressure vessels and a number of qualified inspectors. The inspectors are charged with the duty of examining and verifying all plans and specifications of pressure vessels, supervising their construction and installation, issuing certificates, and making the annual inspection required by the Act of all pressure vessels in public buildings and industrial establishments. "Pressure vessels" are defined to include the following apparatus: boilers and furnaces, either steam or hot air, used for producing motive power or heat; automatic apparatus to supply heat for boilers or furnaces using oil or coal; refrigerating plants used for cooling the air, chilling articles or making ice; tanks or vessels used for containing gas, air or liquids under pressure; every vessel or mechanical apparatus under pressure either of steam, gas, air or liquids, and mentioned in the Canadian Interprovincial Code; every other apparatus added by the Lieutenant-Governor in Council on the recommendation of the Minister. The Act does not apply to mines which are governed by the Mining Act. Plans and specifications of pressure vessels manufactured in the Province must be submitted for the approval of the Chief Inspector and the vessels made according to such plans and specifications, must be accompanied by an affidavit that they are so made. Vessels constructed outside of the Province to be used in the Province must be registered in the office of the Chief Inspector, and for this purpose plans and specifications must be submitted for his approval. Manufacturers of such vessels must furnish a specification sheet supported by an affidavit establishing the quality of material and labour mentioned in the plans. Such vessels are to be inspected during construction. The Canadian Interprovincial Code is to serve as a guide in the construction of pressure vessels and the classification of their accessories, for the technical direction of inspectors and the application of the Act. Any inspector or any member of the Provincial Police may require the production of the certificates, failing which he may stop the work under way and notify the Chief Inspector of any violation of the Act. The Lieutenant-Governor in Council is authorized to make regulations under the Act and

regulations already issued under the provisions of the Industrial Establishments Act are continued in force until replaced, notwithstanding that the sections of the Industrial Establishments Act under which they were issued are repealed. It is provided that nothing in the Pressure Vessels Act shall prejudice the powers of municipal councils to make rules concerning public safety if such are not inconsistent with the Act and regulations.

### Licensing of Pipe Fitters

The Pipe Fitters Act, which came into force on July 1, 1933, establishes a system of inspection of pipe-fitting apparatus and installation, and requires all contractors, journeymen and apprentices in pipe-fitting to be licensed. The Lieutenant-Governor in Council is authorized to appoint a Board of Examiners of three members having theoretical and practical knowledge of such work. An applicant for admission to an examination for a journeyman's licence must have served four years apprenticeship unless he gives proof of study at a technical school, when he will be admitted after three years' apprenticeship. Provision is made for the appointment of qualified inspectors who may carry out inspections at any reasonable hour. Any member of the Provincial Police or any person authorized by the examiners may require production of licences and proof of compliance with the law, failing which he may stop the work and notify the examiners of any violation of the law. The Lieutenant-Governor in Council may make regulations for the carrying out of the Act.\* Penalties are provided for employment of unlicensed persons and for hindering an inspector on duty. The Act does not apply to work on locomotives, railway cars, or ships; to any person employed on the upkeep of systems installed on his employer's premises; nor to mines governed by the Mining Act.

### Other Legislation

An amendment to the Code of Civil Procedure provides that the exemption from seizure of wages and salaries which is granted by the Code shall not apply in the case of a claim for alimentary pension when such wages and salaries are to be seizable up to 50 per cent.

An Act to repeal the Mechanics' Institute and Library Act and to enact a new mode of incorporating Mechanics' Institutes and Library Associations, repeals the Mechanics' Institute and Library Association Act and declares all such organizations incorporated thereunder to be dissolved and deprived of their rights as from April 13, 1933, except for their liquidation. Such organizations may, however, within thirty days of the said date, obtain a new incorporation under Part III of the Quebec Companies Act. Other persons desirous of establishing such organizations may also be incorporated in the same manner.

An amendment to Part III of the Quebec Companies Act adds a number of sections which provide, *inter alia*, that the Lieutenant-Governor in Council may order an inquiry into the affairs of any corporation. The judge of the Superior Court of the district in which the corporation has its head office may order the cancellation of the letters-patent of such corporation, on petition of the Attorney General served upon the corporation and based upon grounds of public interest, and particularly when the corporation prints, publishes, edits or circulates or aids in printing, etc., any book, newspaper, periodical, pamphlet, print, publication or document of any kind containing blasphemous or seditious matter, allows blasphemous or seditious words to be uttered at its meetings, aids and abets an unlawful assembly or riot or does acts or incites to the doing of an act declared to be an offence by section 98 of the Criminal Code.

### Alberta

The Alberta Legislature which was in session from February 9 to April 11, 1933, enacted a new statute dealing with unemployment relief, and amended the laws relating to workmen's compensation and to motor vehicles.

### Unemployment Relief

The Unemployment Relief Act empowers the Lieutenant-Governor in Council to enter into agreements with the Government of Canada and with cities, towns, villages, and municipal and improvement districts for instituting and carrying out relief measures; to contribute to the cost of relief measures undertaken by

any municipality; and either alone or in conjunction with the Government of Canada and municipalities or any of them to institute and carry out relief measures. Municipalities are authorized to borrow money and do all things necessary for the carrying out of agreements. A return showing operations under the Act must be made to the Legislature within fifteen days of the opening of each session. The Act comes into force on April 11, and is then to be deemed to have been in effect from April 6, 1932. It expires on March 31, 1934, but liabilities created prior to that date may be discharged.

\* See page 702.

### Workmen's Compensation

An amendment to the Workmen's Compensation Act empowers the Board to divide industries in Schedule II into classes and any class into one or more subclasses. A new clause provides that assessments may be made in such manner and form and by such procedure as the Board may deem adequate and expedient. In case of a strain causing hernia, when it is shown that failure of a workman to report to his employer within twenty-four hours involves hardship for the workman, the Board is authorized to extend the period for reporting as it deems fair and reasonable.

### Motor Vehicles

The Vehicles and Highway Traffic Act was amended by the addition of sections dealing with the financial responsibility of owners and

drivers. These are similar to provisions enacted recently in other provinces, including those in the Nova Scotia Motor Vehicle Act summarized in the LABOUR GAZETTE for August, 1932, at p. 866. The Alberta Act came into force by proclamation on June 1, 1933.

An amendment to the Alberta Insurance Act enacts new provisions relating to motor vehicle insurance similar to those added recently in other provinces. These include a clause stating that the insured shall not be liable under an owner's or a driver's policy for any liability imposed by any workmen's compensation law upon the insured nor, unless the coverage is expressly extended as provided in the Act, for loss or damage resulting from bodily injury to or death of any employee of the insured while employed in the operation or repair of the automobile.

## Manitoba

The Manitoba Legislature, which was in session from February 14 to May 4, 1933, enacted new statutes dealing with unemployment relief and with the inspection of boilers and pressure vessels. An amendment to the law governing shops, and sections in a number of other Acts are also of labour interest.

### Unemployment Relief

The Unemployment Relief Loan Act, 1933, authorizes the Lieutenant-Governor in Council to raise by way of loan the sums required for the relief of distress and unemployment and for assisting municipalities by loaning money to them for relief purposes. Municipalities are also empowered to borrow for such purposes. These powers expire on April 30, 1934. The Lieutenant-Governor in Council may authorize the expenditure for relief of moneys heretofore raised for capital purposes.

### Steam Boilers

The Steam Boiler and Pressure Plant Act is a revision and extension of the Steam Boiler Act and covers pressure plants of all kinds, including refrigeration plants, providing for their inspection and proper installation. Boilers exempted under the Act are those developing less than three horse power; those used in heating private residences housing less than three families; and those subject to inspection under the Canada Shipping Act. Pressure vessels of less than one and a half cubic feet volume or operated at less than fifty pounds pressure to the square inch are excluded, as are those subject to inspection under the Explosives Act (Dominion). Both boilers and

pressure vessels forming part of the equipment of a railway under the Railway Act (Dominion) are exempt. The Act places upon the owner of the boiler or pressure vessel the duty of causing inspections to be made and certificates to be posted. The inspector must condemn for use any unsafe boiler or pressure vessel whereupon the owner must close it down and not operate it again until it is passed as safe by an inspector. The latter may also order repairs and alterations to be made and if such are not promptly attended to may condemn the boiler or pressure vessel for use until the repairs or alterations are completed and passed by an inspector. A person who operates and an owner who permits the operation of a boiler or pressure vessel when condemned is liable to a penalty of not less than \$50 nor more than \$200. Provision is made for an appeal to the Bureau of Labour from an order of an inspector and for a further appeal to the Minister administering the Act. Special inspections may be arranged for at the owner's expense. Inspectors must report to the Bureau of Labour concerning all inspections and must keep records thereof and of all accidents. The following classes of equipment must be operated by or in charge of an engineer holding a certificate under the Act: steam plants over three boiler horse power operated at a pressure exceeding thirty pounds to the square inch, or with safety valves set to permit a pressure exceeding thirty pounds, but not including steam plants used on farms for farming purposes only; and refrigerating plants of fifteen tons capacity and over, and compressed air or compressed gas plants over seventy-five horse power where the pressure in either case exceeds fifty pounds to the square inch.

Only British subjects twenty-one years of age or over are eligible for examination as engineers. An applicant for a first class certificate, which entitles the holder to take charge of any plant, must hold a second class certificate and since its receipt have operated a plant of over 200 horse power or assisted in the operation of one over 500 horse power for a period of two years; or he must have served six years in building or repairing boilers or machinery and in addition have two years' experience in operating a plant over 200 horse power or assisting in the operation of one over 500 horse power; or he must hold a certificate in engineering from a recognized school of technology, and have in addition three years' experience in operating a plant over 500 horse power. An applicant for a second-class certificate, which entitles him to take charge of a plant not exceeding 500 horse power in the aggregate, must hold a third-class certificate and since its receipt have operated a plant of 100 horse power or assisted in operating one of over 200 horse power for two years; or have spent four years in building or repairing boilers or machinery and two years in operating a plant of 100 horse power or assisted in operating one of 200 horse power; or hold a certificate in engineering from a recognized school of technology and have in addition three years' experience in operating a plant of 200 horse power. An applicant for a third-class certificate, which entitles the holder to have charge of a plant not exceeding 200 horse power in the aggregate, must hold a provisional certificate and since its receipt have fired a boiler or assisted an engineer in operating a plant of at least 100 horse power for a period of one year; or have served two years firing a boiler or assisting an engineer in a plant developing at least 100 horse power; or have served two years in building or repairing boilers or machinery and an additional year firing or assisting an engineer; or has a certificate in engineering from a recognized school of technology and two years' experience as assistant in a plant of 100 horse power or more. An applicant for a provisional certificate which entitles the holder to have charge of a stationary steam plant not exceeding the horse power specified in the certificate, must have a year's practical experience in the operation or construction of boilers and the machinery used therewith. The Board of Examiners consists of three engineers holding first class certificates appointed by the Lieutenant-Governor in Council and including one representative each of employers and engineers. The Lieutenant-Governor in Council may also on the recommendation of the Min-

ister, make regulations under the Act. Regulations issued under the Steam Boiler Act are continued in force.

### Other Legislation

An amendment to the Shops Regulation Act extends the definition of "shop" to include premises where boots are made and repaired.

In the revision of the Hospital Aid Act the section was omitted which allowed a municipality held liable for hospital expenses of any person to attach all sums of money owing to him by his employer. It is provided that in case a hospital admits for treatment or incurs expense for burial of a patient or the Minister of Health and Public Welfare or any municipality becomes liable for the treatment or burial of a patient admitted to a hospital and the patient was employed by any person whose practice is to deduct from wages a fee for medical aid or burial for his employees or was insured against payment of hospital charges in case of illness or against funeral expenses, the amount so owing to him shall be paid, on demand, by the employer or insurer, to the hospital, the Minister, or the municipality, as the case may be. The provisions of the Act respecting liability of the Province or municipality for hospitalization do not apply to workmen who come under the jurisdiction of the Workmen's Compensation Act or to wards of the Dominion Government.

The Minimum Wage Act was amended to provide that when regulations are made with reference to any shop, office, place of amusement, mail order house, or factory providing a standard of minimum wages for boys under 18 years of age no person over that age shall be employed at a lower rate.

An Act to impose a Special Tax upon Incomes provides for tax of two per cent on wages and incomes with exemption of \$480 per annum for single persons and \$960 per annum for married persons. In the case of wages the amount is deducted by the employer and paid over by him to the Government monthly.

An amendment to the Highway Traffic Act provides that a certificate to operate a public service vehicle may be granted subject to certain conditions, including the payment of reasonable wages and observance of proper conditions of service in respect of employees of the holder.

The Parents' Maintenance Act provides legal machinery to compel children to provide for their parents when they are judged financially able to do so.

## HOURS OF WORK IN THE BUILDING INDUSTRY IN THE DISTRICT OF MONTREAL

THE following Order in Council under the Hours of Work Act, which was passed at the recent session of the Legislature of the province of Quebec, was approved by the Lieutenant-Governor of the province on June 15, 1933. An outline of this measure appears in an article on page . . . , outlining the labour legislation of the session.

### No. 1253

The Honourable the Minister of Labour, in a memorandum dated the 14th of June (1922), sets forth:—

1. That in virtue of article 1 of the Act 23 George V, chapter 40, the Lieutenant-Governor in Council may order the number of hours per day or week during which a workman, employed in manual labour, may work;

2. That the building industry, in conformity with article 3 of the said chapter, is not in any manner subject to the competition of other countries or other provinces;

3. That, pursuant to article 5, he called together, on the 16th of May, 1933, the official representatives of the district of Montreal Building Board of Trade, of the International Unions and Catholic Syndicates, of the building trades of the same district, and consulted them on the mode of applying a limitation of working hours in the said industry;

And therefore, the Honourable the Minister recommends that the following provisions be put into force:—

### *Interpretation of the terms for the purpose of the present order*

The following terms will have the significance hereinafter given:—

The words "building industry" comprise the building, repairing or demolishing of every kind and cover especially the men employed in the following trades:

Brick-layers, asbestos-layers, carpenters, joiners, cement finishers, roofers, electricians, tin-smiths, blacksmiths (if employed on the job), crane-men, stationary engineers and firemen, labourers and excavators, lathmen, masons, reinforced concrete workmen, bridgemen, elevator builders, tile-layers, painters, plasterers, plumbers and pipe fitters, marble-polishers, stone cutters, and joint finishers, the helpers and apprentices.

The words "Montreal Division" will comprise the juridical districts of Montreal, Montcalm, Hull, Pontiac, Terrebonne, Joliette, St-Hyacinthe, Chambly, Iberville, and Richelieu (pursuant to the Order in Council No. 1036 of

June 17, 1921, determining the boundaries of the district of Montreal, for the inspection of industrial establishments).

The word "contractor" designates any person, association or corporation;

(a) Contracting or sub-contracting for works by the job, for percentage or by the day;

(b) Building on his own account;

*Article 1.*—From and after the 1st of July, 1933, the duration of effective labour in the building industry and within the limits of the Montreal Division, must not exceed eight hours per day.

The total hours of effective labour, in the course of one single week, must not, in any case, exceed forty hours.

Any contractor may, however, at his option, adopt the two-shift system, pursuant to the provisions of article 2.

*Article 2.*—Notwithstanding the provisions of article 1, any contractor undertaking works for a municipal or school corporation, fabrique or parish trustees, the Government of this province, must establish on his job the two-shift system, with duration for each shift of six hours of effective labour for the six working days of the week.

The contractor of works for an institution, association or corporation, the costs whereof are paid or guaranteed in a proportion of at least 50 per cent by the Government of this province or by a municipal corporation, or by both, shall also be obliged to maintain the two-shift system.

*Article 3.*—The provisions of article 2 shall be applicable only from the 1st of May to the 1st of October of any one year, and if the cost of the work exceeds \$20,000.

*Article 4.*—The present order does not apply:

(a) If a contract by the job was signed before its coming into force;

(b) If the cost of the works, including the salaries and materials, does not exceed \$500.

(c) If a person performs work by his own hands on his property.

*Article 5.*—The Minister of Labour may, after an investigation held by the inspectors of industrial establishments, grant permits of derogation to the present order for preparatory, complimentary or urgent work.

Since the above order was published, the Hon. C. J. Arcand, provincial Minister of Labour, has held conferences with employers and workers with a view to the establishment of the 40-hour working week in the building industry in other districts of the Province.

## Regulations Under Pipe-Fitters Act in Province of Quebec

New regulations under the Pipe-Fitters Act, passed at the recent session of the Quebec Legislature, were published in the *Quebec Official Gazette*, June 30, 1933. In these regulations, each kind of pipe-fitting mentioned in the Act (i.e. in heating systems, in refrigerating systems, and in connection with mechanical sprayers) is classified as a "trade division" or "division".

The fees for a contractor's licence are as follows: one trade division, \$25; two trade divisions, \$30; three trade divisions, \$35.

The fee for an apprentice licence is 25 cents.

The fees for a temporary contractor's licence are double those mentioned above. The fee for renewing a contractor's licence is the same as the original charge, while renewal fees for a journeyman's licence are \$1, \$1.50 and \$2 for one-trade, two-trade and three-trade divisions, respectively. The apprentice's renewal fee is 25 cents. The Board of Examiners will issue a duplicate licence to replace a licence that has been lost, stolen or destroyed, on receipt of proof, the fee in such case being 50 cents.

## Classes of Trucking Exempted from Licensing in Manitoba

The Municipal and Public Utility Board of Manitoba published an order on June 16, 1933, exempting trucks and trailers that are used for certain purposes from the provision of the Highway Traffic Act, which calls for the licensing of commercial trucks. (The present order consolidates a number of previous findings of the Board.)

Trucks and trailers are exempted that are used for the following purposes during the current year: (1) Transporting eggs from farmers' premises where the truck is certificated to transport milk and cream only; (2) operation of their trucks by local draymen within a fifteen mile radius of their place of business; (3) towing by trucks operated by local garages; (4) transporting tools and equipment owned and used by repair men or companies in connection with the repairing of

tramways, electric or telephone lines, water pipe lines, boilers, boring machinery, farm implements, threshing machinery, and manufacturing plants; (5) transporting livestock to exhibitions or fairs; (6) delivering their own fish by fishermen where the truck does not exceed one-half ton carrying capacity; (7) transporting dead animals to rendering stations; (8) transporting grain, bait, machinery, or other articles to be used in grasshopper poisoning; (9) transporting farmers' grain to market; (10) where the object of transportation is a single or isolated trip and an official of the Board so designates by letter, which letter shall be carried during the trip; (11) delivering meat for local meat ring; (12) delivering gas and oil from local oil stations to consumers only and within fifteen mile radius of place of business.

## Provincial Inquiry Into the Fishing Industry of Manitoba

At the recent session of the Manitoba Legislature the Select Standing Committee of Agriculture and Immigration brought in a report on conditions existing in the fishing industry in the province. This report, which was adopted by the Legislature last May, recommended "that the fishermen reorganize themselves"; and that a special committee be appointed to investigate all matters relating to the industry. Subsequently the provincial government appointed the special committee, as proposed, to consist of the following members: Professor R. A. Wardle, Department of Biology, University of Manitoba; Professor H. C. Grant, Department of Agriculture and Economics, University of Manitoba; Mr. T. W. Laidlaw, Assistant Deputy Minister, Department of Mines and Natural Resources and

Industry; Mr. James McLenaghan, M.L.A.; and Mr. Skuli Sigfusson, M.L.A.

The committee is to inquire into all matters relating to the fish industry of Manitoba, and more particularly the following:—

(a) The cost of nets and fishing equipment with a view to ascertaining: (1) Reasons for the increase in prices thereof since 1926; (2) If nets and equipment cannot be obtained at lower prices than those demanded at the present time;

(b) The advisability of requesting the Dominion Government to investigate the operations of persons engaged in the purchasing and distributing of fish produced in Manitoba waters under "The Combines Investigation Act," with a view to determining whether or not a combine exists.

(c) The advisability of establishing an open fish market in Canada at a point therein readily accessible to fish dealers in the United States and providing for a competitive marketing of Canadian fresh water fish under Canadian Legislative Control.

(d) To secure the eliminating, if possible, of excess handling charges.

(e) Regulations relating to the fishing industry in Manitoba with particular reference to the production of a standard quality product.

(f) Such further and other matters as the Commissioners may consider in the interests of the industry.

## MINIMUM WAGES FOR WOMEN IN BRITISH COLUMBIA

### Temporary Reduction in Fruit and Vegetable Industry

THE Minimum Wage Board of British Columbia has issued the following emergency order, dated June 14, 1933, relating to the fruit and vegetable industry, and providing for a temporary reduction of 10 per cent in the existing minimum wage rates for experienced female employees. Similar action was taken by the Board during the canning season last year in connection with this industry (LABOUR GAZETTE, July, 1932, page 768). The original order of 1926 governing the fruit and vegetable industry, appeared in the LABOUR GAZETTE, October, 1926, page 948.

#### ORDER NO. 17B (EMERGENCY) RELATING TO FRUIT AND VEGETABLE INDUSTRY

Effective June 15, 1933, to December 31, 1933.

Whereas on the 3rd day of September, 1926, an obligatory order was issued by the Minimum Wage Board relating to the fruit and vegetable industry under the provisions of the "Minimum Wage Act," being chapter 173 of the "Revised Statutes of British Columbia, 1924," by paragraphs 2 and 3 of which order a minimum wage in respect of the said industry was fixed for experienced female employees therein:

And whereas the said order became effective in sixty days from the date thereof, and has since been continuously in force, subject during the period from the 15th day of June, 1932, to the 15th day of November, 1932, to the provisions of Emergency Order No. 17a, dated the 14th day of June, 1932:

And whereas the Board, under the provisions of section 6 of the said Act, has held public meetings in Penticton on the 25th and 26th days of May, 1933; at Vancouver on the 27th day of May, 1933; and at Victoria on the 12th day of June, 1933, at which employers and employees in the said fruit and vegetable industry and the general public were heard:

And whereas, in the exercise of the discretion vested in it by the said Act, without reconvening or calling any conference, the Board has re-opened the question respecting the minimum wage so fixed by the said order, and has considered the question.

Now the Board doth order, in amendment of the said order of the 3rd day of September, 1926, that for the period from the 15th day of June, 1933, to the 31st day of December, 1933, both dates inclusive, the minimum wage fixed by the said order for experienced female employees in the fruit and vegetable industry (including the respective rates per hour or per piece fixed in respect thereof) shall be reduced by the deduction therefrom of ten per centum of the amount thereof; and that except to the extent and for the period herein provided the said order of the 3rd day of September, 1926, shall continue in full force and effect as if this order had not been made.

Dated the 14th day of June, 1933.

ADAM BELL, *Chairman*,  
HELEN GREGORY MACGILL,  
HERBERT GEDDES,

*Members of the Minimum Wage Board.*

Each employer shall post, and keep posted, a copy of this order in each room in which employees affected by the order are employed.

## Minimum Wages for Women in Saskatchewan

Order No. 6, of the Minimum Wage Board of Saskatchewan, which was reprinted in the last issue of the LABOUR GAZETTE, page 611, was first issued on May 10, and was subsequently revised. The final text of the order is as follows:—

#### ORDER NO. 6

1. For a period of four months from the first day of May, 1933, the minimum rates of wages fixed by the Board for workers in shops and stores, laundries and factories, mail order houses, hotels, restaurants and refreshment rooms, beauty parlours, and barber shops, are hereby reduced by ten (10) per cent where the

rate so fixed is less than thirteen (13) dollars per week, and by fifteen (15) per cent where the rate so fixed is thirteen (13) dollars per week or over:

Provided that where an employee is employed for twenty-four (24) hours or more in any week, but for less than full time the reduction shall not be greater than ten (10) per cent, and provided further that there shall be no reduction in the case of an employee who is employed for less than twenty-four (24) hours in any week.

2. This Order shall be deemed to have been in force on and from the first day of May, 1933, and supersedes Order No. 6 of the tenth day of May, 1933.

## ANNUAL REPORT OF DEPARTMENT OF RAILWAYS, LABOUR, AND INDUSTRIES OF SASKATCHEWAN

THE fourth annual report of the Department of Railways, Labour and Industries of Saskatchewan reviews the work of the Department during the year ending April 30, 1932. Included in its duties is the administration of the following legislative measures; the Factories Act, the Building Trades Protection Act, the Electoral Workers Protection Act, the Employment Agencies Act, the Mines Act, and the Minimum Wage Act. The preparation of statistics of employment, wages and hours of labour, strikes and lockouts, labour organization, industrial relations, conditions of industrial employment, etc., also fall within the scope of the department's activities. Matters concerning questions of adjustment of freight rates, locations of branch lines, etc., are dealt with by the Railway Development Branch of the Department. In addition to its normal functions, the Department was called upon to take its share of relief administration.

*Industrial Statistics.*—In its annual report, the Industrial Development Branch states that the rigid economy practised by all Departments resulted in curtailment of activities so that no industrial surveys were carried out and the amount of field work was kept to a minimum. The last year for which completed statistics are presented is 1930. In that year the flour milling industry occupied first position among Saskatchewan industries with the dairy industry in second place. The principal industrial statistics for 1930 were as follows: Number of reporting establishments, 750; capital invested, \$65,486,140; number of employees, 7,248; salaries and wages, \$9,229,593; gross value of products, \$62,276,766.

*Steam Boiler and Industrial Inspection.*—The report of the Steam Boiler and Industrial Section, which deals with inspections of boilers, pressure vessels, and elevators, states that very few agricultural steam tractor engines had been brought into the province, but that there had been an increase in the number of pressure vessels and stationary plants.

*Coal Mine Inspection.*—The mines inspector reports that there were 139 coal mines in operation during the period from May 1, 1931 to April 30, 1932. There were 140 non-fatal accidents and one fatality in these mines. Fatalities in metal mines numbered two. A compilation of fatal accidents in coal mines since the beginning of coal mining in the province shows a total of 32, of which 15 were caused by falling coal or clay.

*Employment Service.*—The statistics of the Employment Service Branch were summarized as follows: Applications, 37,390; vacancies, 30,388; placements, 28,918. The average wage for farm work prevailing throughout the year was: winter work, from board only to \$10 per month; spring work from \$5 to \$25 per month; harvest work, from \$1.00 to \$2.50 per day; fall work, after threshing to freeze-up, from board only to \$10 per month.

*Immigration.*—Reference is made to the provision under the Empire Settlement Act by which teen age British boys are placed on carefully selected farms. Under this scheme, 16 boys arrived at the provincial government hostel in May, 1931, but present conditions being unfavourable, it was decided not to bring any more boys to Canada. Since the inception of the scheme in January, 1929, 173 boys have been brought out by the Saskatchewan government. Of this number eleven returned to England, paying their own fares; two were returned to England by the department on account of ill health; eleven were returned to England by the department as not suitable. Eleven were transferred to other provinces, to relatives engaged in farming operations. Twenty-one ran away from their employers, and have not since reported to the department, and two boys died. The one hundred and fifteen boys in "aftercare" are considered satisfactorily placed, as reports from the Inspector and from the boys' employers indicate that the boys are contented and making progress in their work.

The total number of immigrants reported as coming from Great Britain to Saskatchewan in 1931 was 1,352.

*Industrial Disputes.*—During 1931 there were in the province five disputes, affecting 744 employees. The most serious of these was the strike at Estevan in September, 1931.

The labour legislation referred to in the report was reviewed in the LABOUR GAZETTE, May, 1932, page 531, and for June, 1933, page 599.

### Minimum Wages for Female Employees

The report of the Minimum Wage Board of Saskatchewan for the fiscal year ending April, 1932, is also incorporated in the annual report of the Department. There were 719 firms reporting to the Board during the year and the number of female workers in these firms totalled 2,656 of which 469 were classed as inexperienced. In addition there were 114

piece-work and part-time employees, and 7 apprentices paying fees. During the year there were 907 general and 52 special investigations made into 953 businesses.

Increases are indicated in the number of employees in hotels and restaurants, and in beauty parlours, there being 163 more in the former, and 7 in the latter than in the year previous. However, there was a decrease in the number employed in shops and stores of 412, in laundries and factories, 51; and in mail order houses, 156.

There were 12 court cases against employers, convictions being obtained in eleven cases as a result of which back wages for \$1,308.98 and overtime for \$97.00 were paid. One case was dismissed as the party charged was not held by Court to be responsible.

The highest wage set by the board for experienced workers was \$15.00. Out of a

total of 1,129 employees in shops and stores, there were 567 receiving \$15.00 per week, and 314, \$16.00 and over. In beauty parlours, with 119 employees, there were 68 receiving \$15.00 per week, while 33 received \$16.00 and over. In laundries and factories and mail order houses, where \$14.00 is set as the minimum wage, out of 566 employees there were 178 receiving \$14.00, and 251, \$15.00 and over. In hotels and restaurants a total of 842 women were employed, of whom 69 received over the minimum wage.

Permits to work overtime issued during the year numbered 37, shops and stores 22, mail order houses 7, factories, 8; these were issued largely during the Christmas season, stock taking periods, etc. Overtime pay or time off was allowed in all cases.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

THE Seventeenth session of the International Labour Conference (League of Nations) was held at Geneva from June 8 to July 1, the delegates being representative of forty-nine states members of the Organization, besides four observers on behalf of the United States of America. The Canadian delegation consisted of the government representative, Dr. W. A. Riddell, Canadian advisory officer, League of Nations, with Mr. Pierre Beaulé, president of the Federation of Catholic Workers of Canada, as adviser; the employer's representative Mr. A. R. Goldie, chairman of the Industrial Relations Committee of the Canadian Manufacturers' Association; and the worker's delegate, Mr. James Simpson, vice-

president, Trades and Labour Congress of Canada.

The conference dealt with the following subjects: (1) Abolition of fee-charging employment agencies (second discussion); (2) Invalidity, old age and widows' and orphans' insurance (second discussion); (3) Unemployment insurance and various forms of relief for the unemployed; (4) Methods of providing rest and alternation of shifts in automatic sheet-glass works; and (5) Reduction of hours of work; report of the Tripartite Preparatory Conference.

The next issue of the LABOUR GAZETTE will contain a full account of the conference, with the text of the Draft Conventions and Recommendations that were adopted.

## Workmen's Compensation in Ontario in June

During the month of June 3,189 accidents were reported to the Ontario Workmen's Compensation Board, as against 3,285 during May and 3,614 during June a year ago. The fatal accidents numbered 11, as compared with 18 in May and 25 in June last year. Of the total of 3,189 accidents, 2,808 including 9 fatalities, were in Schedule 1 industries; 188 (including 2 fatal) were in Schedule 2 industries; and 193 were accidents to employees of the Crown.

The total benefits awarded in June amounted to \$282,085.22, of which \$223,609.56 was for compensation and \$58,475.66 for medical aid. This brings the total benefits awarded during the half year ending June 30 to \$1,802,445.93, as compared with \$2,668,718.13 during the corresponding period of 1932.

During the first six months of 1933 the accidents reported numbered 17,009, a decrease of 4,868 from the number for the corresponding period of 1932. The fatal accidents for the six months' period were: 1933, 97; 1932, 130. The average daily benefits awarded for the half year were \$12,016, and the average number of cheques issued daily 629.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JUNE, 1933

### Reports of Superintendents of Employment Service

**T**HE employment situation at the end of June was reported by the superintendents of the Employment Service to be as follows:—

Farmers in the Maritime Provinces were busy with their early vegetable and strawberry crops, and the city markets were well stocked with garden truck. Very good catches of fish were reported. Prospects appeared brighter for the lumber industry, as pulpwood operations were increasing daily, thus affording work for a large number of men. Wages, however, were low. Mines in the New Glasgow area, as well as those in Cape Breton and vicinity, operated from one to three days per week. Manufacturers of foodstuffs and soft drinks reported improvement, and oil companies increased output, due to fine weather and the holiday season; some slackness, however, prevailed in the iron and steel industry. Available work at the Saint John drydock was expected to keep employees busy there until the fall. Increased building activity was likewise in evidence, while the Saint John Harbour Board announced proposed construction at West Saint John which would afford employment for at least 500 men for the balance of the summer. Extensive highway construction and repairs were also underway in various centres. Passenger transportation by rail and water was heavy, due to holiday traffic, and the unloading of several boats provided additional labour for waterfront workers. Trade was slightly improved. The demand for household workers in the Women's Domestic Section continued, although at Halifax it was slightly less, due to residents being absent from the city during the summer months.

Some improvement was noticed in the farming situation in the Province of Quebec, but little activity was reported in logging, although prospects appeared good for a busy season. Mining was quiet, with a surplus of labour in the mining centres. Manufacturing concerns were slightly busier at Hull, Montreal, Quebec and Sherbrooke. This was particularly the case in the boot and shoe industry, and cloth and textile trades. Building construction, also, had provided employment for more men. In Montreal, orders were received for building tradesmen and the demand for labourers increased. This municipality likewise employed a large number of workers at sewer and paving construction. Sherbrooke, Hull and Three Rivers also recorded improvement. Transportation by water was active, although quiet by rail. The

commercial situation remained unchanged, only the larger centres reporting increased trade. In the Women's Domestic Section a number of requests for domestic help, especially cooks and assistants, had been received, but numerous applicants still remained unemployed.

The demand for farm help in the Province of Ontario was good, with no difficulty experienced in filling all orders, although the supply of experienced men was getting low. As many of the calls were for single men, the registration of single unemployed was thereby considerably reduced. Fewer men were being placed in logging as river drives were almost completed, but conditions appeared better for the future in this industry than for some time past. Sawmills were working to capacity, and were taking on a few men from time to time. Mining was quiet, although at Timmins, some of the smaller prospects were opening, which would likely create more work before long. Regular improvement was noted in all manufacturing concerns, the iron and steel group included, the majority of firms gradually taking back former employees and business managers remained optimistic about the future. Fruit and vegetable canneries were particularly busy, some running overtime. Very little activity was noticed in the building trades other than repairs, about the only outside employment offering being road work at the various government relief camps. The average demand for women domestics continued steady, although suitable applicants were sometimes difficult to obtain. Many women and girls, however, had been placed as fruit and berry pickers.

General conditions in farming throughout the Prairie Provinces were more favourable, owing to much-needed rains. These came at a critical time and helped to avert extensive damage from grasshoppers and lack of moisture, and thus proved of inestimable value. Many farmers had commenced to cut hay, but wages offered for the work were low and help difficult to obtain under these conditions. Logging and mining were quiet, and only summer crews were retained in the latter section. No improvement was registered in manufacturing, with industries continuing inactive. Little change was shown in building construction, the majority of work offering being on repairs. Employment was still provided for a number of men at the Government relief camps. Trade was only fair. The

demand for day workers in the Women's Domestic Section was lower than usual, while the call for experienced household help remained steady.

Owing to haying having been delayed by weather conditions, demands for farm help in British Columbia were few, but fruit crops in the Okanagan Valley were coming on well. A heavy hail storm, however, did considerable damage in some districts. Logging showed some improvement, and sawmills were busy getting out fruit crates and boxes, while shingle mills were working to capacity. The outlook in mining also appeared brighter, as more help had been taken on at some of the mines. Building construction was quiet, al-

though more permits had been issued at Vancouver during June than in the corresponding month last year. This, however, was only a small item when compared with the great need of work for the unemployed men in this group, about the only employment available being that provided by government relief on highways. Inactivity was noted on all water-fronts. Trade was quiet. Orders for domestic work were received in the Women's Section, but a large number of female applicants were still on relief, as the berry picking season this year, which normally would have provided work for a number of women and girls, had been very bad due to unsettled weather and the low price of berries.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN MAY, 1933

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on June 1 was 8,105, the employees on their payrolls numbering 743,572 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for May, was 1,704, having an aggregate

membership of 148,016 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 60 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of June, 1933, as Reported by Employers

According to data tabulated by the Dominion Bureau of Statistics from 8,105 firms throughout Canada, there was an important expansion in industrial activity at the beginning of June, resulting in the greatest increase in employment that has been reported in any month since June 1, 1930. The payrolls of the reporting employers increased from 715,068 on May 1 to 743,572 at the beginning of June, or by 28,504 persons. This gain of four per cent in the month was approximately twice as large as that reported on the same date in either 1932 or 1931, and (unlike the increase last year), has the added significance of including much smaller increases due to unemployment relief undertakings. The index on June 1, 1933, stood at

80.7, as compared with 77.6 in the preceding month, and 89.1 on June 1, 1932. On the same date in the eleven preceding years, the index (average 1926=100), was as follows:—1931, 103.6; 1930, 116.5; 1929, 122.2; 1928, 113.8; 1927, 107.2; 1926, 102.2; 1925, 95.6; 1924, 96.4; 1923, 98.5; 1922, 90.3 and 1921, 87.7. Although the increase on June 1, 1933, was very considerable, it was nevertheless not quite so large as the average gain reported between May and June in the years since 1920, so that the index, after correction for seasonal variation, was fractionally lower than on May 1. However, in the manufacturing group, which takes in more than half the total number of workers included in the survey, and is not affected by the reporting of

employees directly engaged on relief work, the increase on June 1 is greater than the usual seasonal gain recorded in the last twelve years.

Pronounced advances were reported in manufacturing, the additions to staffs exceeding those noted on the same date in other years of the record, except 1922 and 1928; the favourable movement extended to nearly all classes of factory employment. In the non-manufacturing division, all the major industrial groups except communications also showed improvement. Stream-driving opera-

### Employment by Economic Areas

Improvement was indicated in all of the five economic areas, firms in Quebec employing the greatest number of extra workers.

*Maritime Provinces.*—Gains were noted in the Maritime Provinces, according to statistics received from 602 employers with a combined working force of 57,850 persons, as compared with 55,963 on May 1. This increase was smaller than that reported on June 1 of last year, when considerably more workers had been taken on as an unemployment relief measure. Manufacturing (particularly in the

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

tions resulted in heightened employment in logging; this group and trade, mining and services reported increases which compared favourably with the movements indicated on the corresponding date in 1932. The expansion in construction provided work for a substantial number of workers, but was not so great as on June 1 of last year, when it was to a considerable extent due to unemployment relief work on the highways. This was a factor of lesser importance in the month under review, when a higher proportion of the increase took place in building construction.

lumber, food, pulp and paper and textile divisions), logging and construction registered heightened activity. On the other hand, transportation was seasonally slacker. Employment generally was in less volume than on June 1, 1932.

*Quebec.*—Construction and manufacturing recorded important increases in personnel in Quebec, and there were also gains in logging, mining, trade and services. Within the manufacturing division, pulp and paper, lumber, textile, mineral product, food, leather and rubber factories reported the greatest improve-

ment, while tobacco, iron and steel and electrical apparatus works were slacker. The gain indicated by the co-operating establishments provided work for considerably over twice as many persons as that noted on the same date of last year, but the index was then higher. Statements were tabulated from 1,957 firms employing 213,888 workers on June 1, or 10,742 more than in their last monthly report.

*Ontario.*—Employment in Ontario showed a decided advance which greatly exceeded that recorded on June 1, 1932; the index then, however, was some eight points higher. The

payrolls of the 3,563 co-operating establishments aggregated 307,051 employees, as against 298,901 on May 1. Manufacturing registered the greatest expansion; the metal, food, lumber, textile, pulp and paper, leather and electric current divisions showed decided improvement. Important gains also occurred in logging, mining, transportation, building and railway construction and services.

*Prairie Provinces.*—Construction (especially railroad construction), steam railway transportation, trade, services, mining and manufacturing reported improvement in the Prairie Provinces; the food and lumber industries

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS  
(AVERAGE CALENDAR YEAR 1926=100)

|  | Canada | Maritime<br>Provinces | Quebec | Ontario | Prairie<br>Provinces | British<br>Columbia |
|--|--------|-----------------------|--------|---------|----------------------|---------------------|
| June 1, 1921.....  | 87.7   | 100.4                 | 79.5   | 90.4    | 90.5                 | 82.8                |

| Relative Weight of Employment by Economic<br>Areas as at June 1, 1933..... | 100.0  | 7.8                   | 28.7   | 41.3    | 13.8                 | 8.4                 |

showed the greatest advances in the factory employment group. The 1,188 employers whose statistics were tabulated employed 102,463 persons, as against 98,098 in the preceding month. Much smaller increases were indicated on June 1, 1932, but the index then was higher.

*British Columbia.*—An aggregate payroll of 62,320 workers was employed by the 793 reporting firms, which had 58,960 at the beginning of May. This increase greatly exceeded that noted on the same date in 1932, the number added to the staffs being,

in fact, greater than in any other month since May 1, 1930. The index of employment, however, was lower than on June 1 of last year. Manufacturing recorded the most noteworthy expansion on the date under review; within this group, the improvement was unusually pronounced in lumber mills, but there were also gains in fish-canning, pulp and paper, textile and metal factories. Among the non-manufacturing groups, shipping, construction and logging recorded heightened activity.

Table I gives index numbers by economic areas.

**NOTE.**—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

### Employment by Cities

The trend of employment was upward in seven of the eight cities for which separate compilations are made; Montreal, Quebec City, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver all showed considerable gains, while a decline was noted in Windsor and the adjacent Border Cities.

*Montreal.*—Further improvement was recorded in Montreal, where the 1,118

co-operating firms employed 118,117 persons, an increase of 1,608 over their May 1 staffs. Manufacturing, especially of food, mineral and leather products, reported increases, and construction and services were also busier. The index, at 80.6, was lower than in June, 1932, although the gains then indicated were smaller.

*Quebec.*—Continued and larger increases were registered in Quebec City, chiefly in manufacturing, services and construction.

**NOTE.**—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

| Relative Weight of Employment by Industries as at June 1, 1933..... | 100.0          | 53.4          | 1.5     | 5.6    | 2.9            | 12.5           | 10.6         | 2.8      | 10.7  |

**NOTE.**—The "Relative Weight," as given above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

Statements were tabulated from 152 establishments having 12,122 workers, as against 11,698 in the preceding month. Smaller advances had been indicated at the beginning of June of a year ago, but the index then was higher.

*Toronto.*—Returns were furnished by 1,211 employers in Toronto with 103,660 persons on their payrolls, compared with 102,496 on May 1. Manufacturing as a whole was brisker; there were losses in textile and iron and steel factories, but these were more than

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

| Industries                                | Relative weight | June 1, 1933 | May 1, 1933 | June 1, 1932 | June 1, 1931 | June 1, 1930 | June 1, 1929 | June 1, 1928 |

The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

offset by gains in food, printing and publishing and some other industries. Firms in construction and services also increased their employees. The index was lower than on June 1, 1932, although a contraction had then been indicated.

*Ottawa.*—Construction showed heightened activity in Ottawa, and manufacturing was also busier, particularly in lumber and pulp and paper mills. Employment was not so active as at the beginning of June of last year, when a reduction had occurred. A combined working force of 11,557 employees was recorded on June 1, 1933, by the 156 co-operating firms, who had had 11,056 on their staffs in the preceding month.

*Hamilton.*—Considerable improvement was noted in Hamilton, where 241 employers reported 23,796 workers on their paylists, as compared with 21,909 at the beginning of May; the number added to staffs was the highest on record for any month in the last eleven years. Most of the increase took place in manufacturing, notably in textile and iron and steel plants, while transportation was also rather more active. Employment was quieter than on the same date of a year ago, when the trend was downward.

*Windsor and the adjacent Border Cities.*—Employment in the Border Cities showed a decrease on June 1, when data were received from 139 firms with 10,107 employees, or 194 fewer than at the beginning of May. Most of the loss took place in automobile factories, while other groups reported only slight changes. An increase had been registered on June 1, 1932, and employment was then in greater volume.

*Winnipeg.*—An aggregate working force of 33,059 persons was indicated by the 385 employers whose statistics were received, and who had 32,094 employees on May 1. This increase compared favourably with the decline noted at the beginning of June of last year, but the index then was higher. A large share of the gain recorded on the date under review was in manufacturing and trade, while other groups showed only slight changes.

*Vancouver.*—Manufacturing and shipping reported gains in Vancouver, the improvement in the former occurring largely in lumber and textile factories. Statements were tabulated from 342 employers with 25,398 workers in their employ, as compared with 24,565 on May 1. A somewhat smaller increase had been indicated on June 1 of a year ago, but the index then was higher.

## Manufacturing

There was a strongly upward movement in manufacturing, which extended to most of the industries so classified, and to the five economic areas, with the result that factory employment showed the greatest advance recorded in any month since February 1, 1930. The increase was larger than the average seasonal gain recorded on June 1 as compared with May 1 in the years since 1921; it is also noteworthy that the advance exceeded that indicated on June 1 in any previous year of the record, with the exception of 1922 and 1928. Statements were tabulated from 4,972 manufacturers employing 396,859 operatives, as compared with 380,595 in the preceding month. Gains were registered in the lumber, pulp and paper, textile, fish-preserving, vegetable food, iron and steel, non-ferrous metal, leather, rubber, electric current and mineral product industries. The increases in textiles and iron and steel are particularly interesting, because they are contrary to the trend usually indicated in these industries on June 1. Tobacco factories were seasonally slacker. Employment was in smaller volume than on June 1, 1932, although the gain then reported in employment in manufacturing had been on a very much smaller scale.

*Animal Products, Edible.*—There were further and more pronounced increases in the number employed in this group, particularly in the fish-preserving division in the Maritime Provinces. Statistics were tabulated from 262 firms employing 20,068 persons, as compared with 17,710 in the preceding month. This advance was much more extensive than that reported on June 1, 1932, when the index was a few points lower.

*Fur and Fur Products.*—There was an upward trend in employment in fur factories, 44 of which enlarged their payrolls from 1,427 persons at the beginning of May to 1,702 on June 1. A smaller gain had been indicated on the same date last summer, but activity was then at a slightly lower level.

*Leather and Products.*—Employment in this group showed improvement, which compared favourably with the falling-off indicated in the same month last year; the index then stood at 90.5, compared with 91.7 on the date under review. The working forces of the 251 co-operating employers totalled 18,546 persons, as against 17,768 in the preceding month. The largest gains occurred in footwear factories in Quebec and Ontario.

*Lumber and Products.*—Continued, seasonal expansion took place in lumber mills, and there were also gains in furniture and con-

tainer factories. Returns were compiled from 753 manufacturers in the lumber group having 29,198 workers on their staffs, compared with 25,322 at the beginning of May. All provinces shared in the upward movement on June 1, but Ontario and British Columbia showed the largest increases. Rather smaller additions to staffs were made on the same date last year, but the index then was higher.

*Plant Products, Edible.*—Gains were noted in this group at the beginning of June, when, 1,712 persons were added to the forces of the 383 co-operating manufacturers, who had 26,479 employees. Fruit and vegetable canning, sugar and syrup and baking and confectionery establishments reported most of the improvement, which occurred largely in Ontario. The increase registered on June 1, 1932, was much smaller, but employment then was in rather greater volume than on the date under review.

*Pulp and Paper Products.*—All branches of this group showed expansion, that in pulp and paper establishments being most pronounced. The index number stood at 85·7, compared with 88·3 at the beginning of June of last year; the gains then recorded, however, were much smaller. An aggregate payroll of 51,424 workers was reported by the 557 establishments whose statistics were compiled; these had employed 49,243 in the preceding month.

*Rubber Products.*—Forty-four rubber factories recorded a combined working force of 9,712 persons, or 231 more than in their last return. Employment was in smaller volume than at the beginning of June a year ago, although only a slight increase had then been indicated.

*Textile Products.*—Reversing the movement usually noted in the early summer, there was an increase in activity in the textile group on the date under review, chiefly in cotton, woollen and knitting mills in Quebec and Ontario. On the other hand, clothing factories were seasonally slack. Data were received from 852 firms employing 78,838 persons, as against 77,309 in the preceding month. This considerable gain compared favourably with the decline reported on June 1, 1932, but the index was then a few points higher than at the time of writing.

*Tobacco, Distilled and Malt Liquors.*—Activity in this group showed a seasonal falling-off, according to 147 employers whose staffs decreased from 13,649 in the preceding month to 13,205 on the date under review. Tobacco factories in Quebec recorded most of this decline. The index number on June 1,

1932, was higher than on the date under review; the downward movement then indicated, however, had involved a larger number of workers.

*Clay, Glass and Stone Products.*—Further improvement was noted in building material plants, 185 of which employed an aggregate working force of 5,648 persons, or 164 more than on May 1. The index stood at 51·9; this was considerably lower than that recorded on June 1, 1932, when a much larger increase had taken place. Ontario reported the bulk of the gain, which occurred mainly in brick yards.

*Electric Current.*—An advance as compared with May was shown in electric current plants, in which activity was lower than on the same date in 1932. The 93 co-operating companies increased their staffs by 467 workers to 13,835 at the beginning of June, 1933. Ontario recorded the greatest improvement.

*Electrical Apparatus.*—Slightly lowered activity was shown in electrical appliance factories, 90 of which reduced their payrolls by 38 employees to 9,058 on the date under review. A much larger recession had been recorded on June 1, 1932, but employment then was at a higher level.

*Iron and Steel Products.*—There was a further increase in the iron and steel group, mainly in rolling mill, machinery, heating appliance, wire, iron pipe and sheet metal works, while land vehicle factories showed curtailment. The general advance is especially interesting because it reverses the trend in employment usually shown in this group at the beginning of June. Returns were tabulated from 778 manufacturers employing 80,727 persons, compared with 79,550 on May 1. Improvement was noted in all provinces except Quebec, that in Ontario being greatest. Extensive losses had taken place on June 1, 1932, but the index was then many points higher.

*Non-ferrous Metal Products.*—These industries reported heightened activity, according to 136 firms employing 12,705 persons, compared with 11,857 in the preceding month. The increase took place very largely in Ontario. Contractions had been recorded at the beginning of June of a year ago, when employment was in smaller volume.

*Mineral Products.*—Continued seasonal advances were noted generally in this group, in which they were decidedly larger than those indicated on June 1, 1932, when the index number was, however, slightly higher.

An aggregate payroll of 12,164 persons was reported for June 1, 1933, by the 112 co-operating employers, who had 11,430 workers on May 1.

*Miscellaneous Manufacturing Industries.*—Production in the manufacturing establishments listed under this heading showed an increase, 220 workers having been added to the forces of the 90 firms whose returns were tabulated, and who employed 4,095 at the beginning of May.

### Logging

Employment in logging camps showed an increase, chiefly due to river-driving operations in the Maritime Provinces, Quebec and Ontario, although firms in British Columbia were also busier. Returns were received from 219 firms employing 11,157 persons, or 1,564 more than on May 1. Heightened activity had also been indicated on June 1, 1932, when the index was a few points lower.

### Mining

*Coal Mining.*—Employment in the Prairie coal fields showed a gain, while very little general change occurred in the Maritime Provinces and British Columbia. Statements were compiled from a total of 89 operators with 21,014 employees, or 85 more than at the beginning of May. The index was lower than on June 1, 1932, when a decline had been recorded.

*Metallic Ores.*—An advance was shown in metallic ore mines, mainly in Ontario; 71 employers enlarged their staffs from 15,755 workers on May 1, to 16,047 on the date under review. A rather smaller gain took place at the beginning of June of last year, when the index was a few points lower than on June 1, 1933.

*Non-Metallic Minerals (other than coal).*—According to data received from 76 firms in this group, they employed 4,364 persons, or 458 more than in the preceding month. Employment was not so active as on the same date of last year, although very much smaller additions to staffs had then been reported by the co-operating firms.

### Transportation

*Street Railways and Cartage.*—A decrease was registered in local transportation on June 1, when 177 companies released 109 employees from their payrolls, bringing them to 24,005 on the date under review. A gain had been noted at the beginning of June, 1932, when the index was practically the same. There were slight but general reductions as compared with May 1, 1933.

*Steam Railways.*—Improvement was indicated in steam railway operation, in which the 100 co-operating employers enlarged their staffs from 53,738 in the preceding month to 53,919 on June 1. The Maritime Provinces reported seasonal reductions, while there were increases in the remaining provinces. Employment was at a lower level than on June 1 of last year, when a contraction had been recorded.

*Shipping and Stevedoring.*—There were pronounced seasonal losses in employment in the Maritime Provinces, but the trend was decidedly upward in Ontario and British Columbia. Statistics were received from 92 firms with 14,643 employees, as compared with 14,590 in the preceding month. Large gains were noted on June 1, 1932, and the index then was rather higher.

### Communication

Improvement was indicated on telegraphs, but telephones were somewhat slacker, so that there was a slight decline in the communication group as a whole. The 82 companies and branches reporting had 21,906 persons on their paylists at the beginning of June, or 125 fewer than on May 1. Employment was at a lower level than on the same date a year ago, when no general change had been indicated.

### Construction and Maintenance

*Building.*—An aggregate staff of 13,530 was reported by the 629 contractors furnishing statistics, who had 11,339 workers on May 1. Activity increased in all provinces, but the largest gains were in Quebec. Building generally was not so brisk as on the same date of a year ago; the expansion then reported had been on a smaller scale.

*Highway.*—The 336 highway and road contractors furnishing returns had 38,909 persons in their employ, or 3,606 more than at the beginning of May. This improvement (shared in by all provinces except Ontario), was not so extensive as that noted on June 1, 1932, and the level of employment then was higher; this was largely due to the greater volume of unemployment relief work reported last summer.

*Railway.*—Continued advances were registered by the track departments of the railways, in which activity was less than at the beginning of June of last year. The working forces of the 37 co-operating employers totalled 26,499 persons, as against 24,166 in the preceding month. The most noteworthy increases were in Ontario and the Prairie Provinces, while there were declines in the Maritimes and British Columbia.

### Services

Hotels and restaurants showed their customary seasonal increase, and laundries and dry-cleaning establishments also reported improved conditions. Statements were compiled from 327 firms employing 20,893 workers, as compared with 19,705 on May 1. The index, at 106.2, was some ten points lower than on the same date in 1932.

### Trade

Improvement was indicated in retail and wholesale trade; 898 establishments reported 79,827 employees, or 523 more than in their

last return. A minor decline had been noted on June 1, 1932, when the index was higher. Most of the improvement on the date under review took place in wholesale houses.

### TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada on the date under review.

## (2) Unemployment in Trade Unions at the Close of May, 1933

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are occupied in work other than their own trades

figures have reference only to the organizations reporting.

The local trade union situation during May continued in the slightly favourable trend of

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

or who are idle owing to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such

the preceding month according to the returns received from a total of 1,704 labour organizations, covering 148,016 members. Of these 35,201 were reported idle on the last day of the month, a percentage of 23.8 contrasted with 24.5 per cent of inactivity in April. Employment losses on a small scale were shown from May of last year when 22.1

per cent of the members reported were without work. British Columbia, Alberta, Ontario, Quebec, and New Brunswick unions all reflected some improvement in the volume of work available from April, though the changes were not outstanding, British Columbia with a 3.1 per cent gain showing the greatest expansion while in Quebec and New Brunswick the increases were fractional only. Retarded activity in the Nova Scotia coal mines was a large factor in the unfavourable movement reported in that province from April, while in Manitoba and Saskatchewan there was a tendency also toward lessened

activity though the recessions were of minor importance. Compared with conditions in May of last year Nova Scotia unions reported a substantial drop in activity during the month reviewed, coal mining as in the previous comparison, being largely responsible for the change. Declines of much lesser proportions, however, were recorded by Saskatchewan and Ontario unions. On the other hand, employment advances on a small scale were noted by Quebec, Alberta, and British Columbia unions. In New Brunswick and Manitoba unemployment remained at the same level as in May a year ago.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

| Month             | N.S. and Prince<br>Edward Island | New<br>Brunswick | Quebec | Ontario | Manitoba | Saskatchewan | Alberta | British<br>Columbia | Canada |
|-------------------|----------------------------------|------------------|--------|---------|----------|--------------|---------|---------------------|--------|
| Average 1919..... | 3.1                              | 2.0              | 3.4    | 2.7     | 2.1      | 3.2          | 2.0     | 7.9                 | 3.4    |
| Average 1920..... | 1.8                              | 2.0              | 7.2    | 3.4     | 3.1      | 3.2          | 2.8     | 11.2                | 4.9    |
| Average 1921..... | 11.3                             | 8.5              | 16.6   | 9.7     | 8.5      | 7.8          | 7.8     | 23.5                | 13.7   |
| Average 1922..... | 7.1                              | 4.3              | 8.6    | 5.0     | 8.9      | 5.4          | 6.1     | 12.4                | 7.1    |
| Average 1923..... | 3.0                              | 2.0              | 6.7    | 3.7     | 5.1      | 3.3          | 6.0     | 5.8                 | 4.9    |
| Average 1924..... | 5.1                              | 4.0              | 10.9   | 6.1     | 6.5      | 4.3          | 5.4     | 5.8                 | 7.3    |
| Average 1925..... | 5.0                              | 3.6              | 10.9   | 5.5     | 5.1      | 3.3          | 8.4     | 5.7                 | 7.0    |
| Average 1926..... | 7.2                              | 2.1              | 6.8    | 4.2     | 3.6      | 3.0          | 4.9     | 5.5                 | 5.1    |
| Average 1927..... | 3.7                              | 1.9              | 6.8    | 4.1     | 4.4      | 3.2          | 4.1     | 5.5                 | 4.9    |
| Average 1928..... | 4.0                              | 1.2              | 6.1    | 3.5     | 4.2      | 3.0          | 4.2     | 5.1                 | 4.5    |
| Average 1929..... | 4.0                              | 1.6              | 7.7    | 4.3     | 7.1      | 5.3          | 6.4     | 5.9                 | 5.7    |
| Average 1930..... | 5.4                              | 3.7              | 14.0   | 10.4    | 9.6      | 10.6         | 13.3    | 11.6                | 11.1   |
| Average 1931..... | 9.5                              | 9.2              | 19.3   | 17.2    | 15.7     | 15.6         | 19.4    | 17.6                | 16.8   |
| Average 1932..... | 9.6                              | 14.4             | 28.4   | 23.7    | 20.0     | 15.8         | 22.6    | 21.6                | 22.0   |
| Average 1933..... | 4.7                              | 3.4              | 5.3    | 2.6     | 1.5      | 2.9          | 1.4     | 4.9                 | 3.6    |
| May, 1919.....    | 4                                | 5                | 0      | 1.7     | 2.6      | 1.3          | 1.5     | 3.6                 | 3.4    |
| May, 1920.....    | 12.9                             | 6.2              | 26.5   | 9.1     | 10.4     | 9.4          | 12.0    | 21.7                | 15.5   |
| May, 1921.....    | 12.1                             | 3.1              | 16.4   | 3.9     | 7.1      | 6.4          | 5.9     | 10.9                | 8.7    |
| May, 1922.....    | 1.3                              | 1.0              | 9.1    | 1.5     | 5.4      | 2.0          | 7.6     | 2.4                 | 4.5    |
| May, 1923.....    | 1.6                              | 3.2              | 13.7   | 5.8     | 6.1      | 1.6          | 4.7     | 3.6                 | 7.3    |
| May, 1924.....    | 3.9                              | 3.2              | 11.7   | 3.5     | 5.8      | 4.6          | 4.4     | 3.4                 | 7.0    |
| May, 1925.....    | 4.1                              | 2.6              | 10.0   | 2.8     | 1.8      | 2.3          | 7.2     | 3.0                 | 4.9    |
| May, 1926.....    | 5.8                              | 1.9              | 8.8    | 3.1     | 3.7      | 1.7          | 6.5     | 3.9                 | 5.2    |
| May, 1927.....    | 5.6                              | 1.5              | 4.8    | 2.7     | 2.9      | 3.0          | 4.3     | 3.0                 | 3.7    |
| May, 1928.....    | 3.9                              | 5                | 6.8    | 2.6     | 3.7      | 2.9          | 4.3     | 2.3                 | 4.0    |
| May, 1929.....    | 4.1                              | 2.2              | 14.8   | 7.7     | 9.0      | 7.9          | 16.5    | 10.6                | 10.3   |
| Jan., 1931.....   | 7.4                              | 10.5             | 16.1   | 18.4    | 15.1     | 18.3         | 15.7    | 16.9                | 16.0   |
| Feb., 1931.....   | 6.7                              | 8.5              | 15.7   | 17.1    | 15.6     | 19.0         | 18.2    | 16.3                | 15.6   |
| Mar., 1931.....   | 6.5                              | 10.9             | 14.0   | 16.0    | 14.7     | 19.5         | 21.8    | 18.8                | 15.5   |
| April, 1931.....  | 7.2                              | 9.8              | 14.9   | 15.2    | 14.4     | 14.6         | 20.3    | 17.8                | 14.9   |
| May, 1931.....    | 6.4                              | 10.3             | 20.5   | 16.6    | 13.0     | 12.8         | 22.0    | 14.2                | 16.2   |
| June, 1931.....   | 7.2                              | 6.5              | 20.0   | 16.2    | 14.1     | 13.5         | 21.7    | 15.6                | 16.3   |
| July, 1931.....   | 7.2                              | 7.0              | 17.0   | 16.6    | 14.7     | 14.5         | 25.3    | 16.3                | 16.2   |
| Aug., 1931.....   | 9.3                              | 7.7              | 16.9   | 15.2    | 15.7     | 11.8         | 24.4    | 16.4                | 15.8   |
| Sept., 1931.....  | 8.2                              | 10.4             | 22.7   | 18.7    | 19.0     | 12.7         | 16.0    | 17.9                | 18.1   |

Each month the returns on unemployment in the largest city in each province with the exception of Prince Edward Island are tabulated separately. Of these, Saint John, Vancouver and Toronto all reflected moderate improvement in the volume of work available during May from the previous month while in Regina and Edmonton the gains in employment recorded were merely nominal. On the other hand, recessions of over 2 per cent occurred in Halifax and Winnipeg, the Montreal situation remaining practically unchanged. In making a comparison with the returns for May of last year Regina unions with an employment contraction of 6 per cent during the month reviewed showed the greatest change, followed by 4.4 per cent in Halifax and lesser declines in Toronto, Edmonton and Winnipeg. Saint John unions, however, reported heightened activity, the increase being over 4 per cent, and in Montreal and Vancouver the changes, though favourable, were slight.

The chart which appears with this article illustrates the unemployment trend by months from January, 1927, to date. The curve during May tended slightly downward, a continuation of the movement shown in April. The level attained by the curve at the close of the month showed little variation from May a year ago, the trend, however, being toward lessened activity.

The situation in the manufacturing industries changed but slightly during May from the previous month, the 457 unions making returns with 42,258 members reporting 28.5 per cent of idleness in comparison with 28.3 per cent in April. Unemployment was, however, in greater prevalence than in May a year ago when 24.2 per cent of the members reported were idle. Cigarmakers and metal polishers indicated large percentage gains in employment during May from the preceding month, though the membership involved was quite small. Among wood and textile workers moderate improvement in conditions was shown, with increases on a small scale

reported by the printing and garment trades, glass and brewery workers, and bakers and confectioners. On the contrary, leather workers and general labourers each reported a drop in activity of around 5 per cent from April, and pulp and paper makers a decline of nearly 4 per cent. The level of activity was also somewhat reduced for hat and cap makers, and meat cutters and butchers, the iron and steel trades showing but fractional employment recessions. Fur, glass and hat and cap workers were all afforded considerably more work during May than in the corresponding month last year, and the situation for garment, wood and textile workers, meat cutters and butchers also showed improvement. Much slacker conditions, however, prevailed for cigarmakers, papermakers, leather, and iron and steel workers, and declines in employment were also apparent among brewery workers, metal polishers, general labourers, printing tradesmen, and bakers and confectioners.

Activity in the coal mining industry was somewhat retarded during May, the percentage of idleness standing at 21.5 in contrast with 17.1 per cent in April. The May percentage was based on the returns tabulated from 50 unions of coal miners comprising 13,003 members, 2,795 of whom were without work on the last day of the month. This adverse employment movement was entirely confined to the coal fields of Nova Scotia, while Alberta and British Columbia miners were somewhat better engaged than in April. Less favourable conditions were shown in the coal mining industry, as a whole, from May of last year when unemployment stood at 14.3 per cent, slackness in the Nova Scotia coal mines accounting in large measure for the change, although in British Columbia also activity was at a considerably lower level. Alberta miners, however, were afforded a greater volume of employment than in May a year ago. Short time work continued quite prevalent in both the eastern and western coal areas.

From unions in the building and construction trades 210 reports were received during May, embracing a membership of 16,965 persons, 11,135 or 65.6 per cent of whom were reported idle at the end of the month in contrast with percentages of 66.7 in April and 57.2 in May, 1932. Pronounced employment advances from April were recorded by carpenters and joiners, and bridge and structural iron workers, gains of more moderate proportions being shown by painters, decorators and paperhangers, and steam shovel men. Among bricklayers, masons and plasterers moderate improvement only was

indicated. On the contrary, electrical workers and granite and stonecutters reported extensive employment losses from April, and noteworthy contractions were apparent among plumbers and steamfitters. Activity for tile layers, lathers and roofers also eased up slightly. Compared with the situation in May a year ago, painters, decorators and paperhangers alone reported a better employment volume during the month reviewed, the improvement being substantial. On the other hand, marked curtailment of activity was evident among electrical workers, granite and stonecutters, and tile layers, lathers and roofers, and recessions of considerable proportions were indicated also by bricklayers, masons and plasterers, carpenters and joiners, and plumbers and steamfitters.

The trend of employment in the transportation industries was slightly upward during May from the previous month according to the reports tabulated from 749 associations, with a total of 55,266 members. Of these 6,762 or a percentage of 12.2 were without work on the last day of the month contrasted with 14.1 per cent in April. The situation varied but slightly from May, 1932, when 12.5 per cent of the members covered in the returns were idle. The bulk of the improvement from April was in steam railway operation which comprised about 79 per cent of the entire group membership reporting, while in navigation and street and electric railway operation the gains in activity recorded were quite slight. Teamsters and chauffeurs showed a fractional adverse change only. In contrast with the returns for May last year navigation workers, during the month reviewed, were accorded a considerably better employment volume and among teamsters and chauffeurs there was a noteworthy gain. The tendency for steam and street and electric railway employees, however, was toward lessened activity, though the changes were small.

Retail clerks were busily engaged during May, the 5 associations reporting with 1,043 members, showing 0.6 per cent of unemployment contrasted with 2.0 per cent in April. In May last year 2.3 per cent of the members reported were without work.

Civic employees indicated a somewhat better situation during May than in either the previous month or May a year ago as manifest by the returns tabulated from 69 associations with 6,385 members. Of these, 329 or 5.2 per cent were idle at the end of the month, contrasted with percentages of 6.0 in April and 9.5 in May, 1932.

Unemployment in the miscellaneous group of trades during May stood at 21.6 in con-

trast with percentages of 20.8 in April and 20.5 in May a year ago. The percentage for the month reviewed was based on the reports received from 115 unions covering a membership of 4,199 persons. Unclassified workers and hotel and restaurant employees reported contractions in activity of about 3 per cent from April, and among theatre and stage employees and barbers employment eased up slightly. On the other hand, stationary engineers and firemen reported nominal improvement in conditions. Activity for hotel and restaurant employees showed large curtailment from May last year, and among theatre and stage employees, barbers and unclassified workers the situation also declined. Stationary engineers and firemen, however, were afforded a somewhat greater volume of work.

Fishermen maintained an almost unchanged situation during May from the previous month, the 2 unions from which returns were tabulated with 705 members indicating an unemployment percentage of 2.1 in contrast

with 2.0 per cent of idleness in April. In May a year ago, however, all members were reported busily engaged.

Among lumber workers and loggers somewhat better conditions prevailed during May from the previous month, though there was still considerable evidence of slackness among these workers, the 4 unions from which reports were received with 677 members showing 31.5 per cent of inactivity compared with 34.3 per cent in April. Unemployment was, however, in greater volume than in May last year when 26.7 per cent of the members reported were without work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1932 inclusive, and also the percentage of unemployment by provinces for May of each year from 1919 to 1930 inclusive, and for each month from January, 1931 to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for May, 1933

During the month of May, 1933, the reports from the offices of the Employment Service of Canada showed an increase of 17 per cent in the average daily placements, when compared with those of the preceding month, but a loss of 4 per cent was indicated in comparison with the average daily placements effected in May a year ago. All groups, except farming, trade and transportation, registered increases over April, the highest gain being in construction and maintenance, and the largest loss in farming. When compared with May last year, gains in farming, construction and maintenance, transportation, and mining were slightly more than offset by decreases in services, logging, manufacturing, and trade, the most pronounced change in the first group being in farming and in the second, in services.

The accompanying chart shows the trend of employment from January, 1931, to date, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noted that the curves of vacancies and placements in relation to applications showed a decidedly upward trend throughout the month, and in both instances, at the end of the period, were slightly above the levels attained at the close of May, 1932. The ratio of vacancies to each 100 applications was 57.9 and 59.5 during the first and the second half

of May respectively, contrasted with ratios of 59.4 and 58.3 during the corresponding periods of 1932. The ratios of placements to each 100 applications during the month under review were 54.4 and 56.9 as compared with 57.2 and 56.2 during May a year ago.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during May, 1933, was 1,258 as compared with a daily average of 1,072 in the preceding month and with 1,289 in May, 1932.

The average number of applications for employment received daily by the offices during the month under review was 2,143 in comparison with 2,069 in April and with 2,190 in May last year.

The average number of placements made daily by the offices of the Service during May, 1933, was 1,191, of which 530 were in regular employment and 661 in work of one week's duration or less, as compared with a total daily average of 1,019 in the previous month. Placements during May a year ago averaged 1,242, consisting of 501 placements in regular and 741 in casual employment.

During the month of May, 1933, the offices of the Service referred 32,676 persons to vacancies and effected a total of 30,952 placements. Of these, the placements in regular employment were 13,770, of which 9,809 were for men and 3,961 for women, while placements in casual work numbered 17,182. The number of vacancies reported by employers

was 24,051 for men and 8,642 for women, a total of 32,693, with applications for work numbering 55,706, of which 43,025 were from men and 12,681 from women. Reports for April, 1933, showed 24,652 positions available, 47,566 applications made, and 23,415 placements effected, while in May, 1932, there were recorded 32,209 vacancies, 54,745 applications for work, and 31,039 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment

better than in the preceding month and 85 per cent above the corresponding month of last year. Placements, also, were 146 per cent higher than in April and over 88 per cent in excess of May, 1932. The substantial gain in placements over May of last year was entirely due to work provided in relief of unemployment on highway construction. The increase in this group was partly offset by a reduction in services. The changes in other groups were nominal. Most of the placements effected during the month were in construction and

| 1933 (5 months)..... | 58,176     | 67,832  | 126,008 |

NOVA SCOTIA

Opportunities for employment, as indicated by orders received at employment offices in Nova Scotia during May, were 142 per cent

maintenance, and services, there being 1,332 in the former and 467 in the latter. Of the placements in services, 326 were of household workers. During the month 112 men and 67 women were placed in regular employment.

NEW BRUNSWICK

There was a gain of 114 per cent in the number of positions offered through employment offices in New Brunswick during May, when compared with the preceding month and over 29 per cent in comparison with the corresponding month of last year. Placements also were 114 per cent higher than in April and 30 per cent above May, 1932. The increases over May of last year were attributable to placements on highway construction in relief of unemployment, but there was also a small gain in logging. All other groups showed

\* 72 Placements effected by offices since closed.

declines, but none were large, except in services. Placements by industrial divisions included: manufacturing, 27; logging, 20; construction and maintenance, 506; and services, 573, of which 393 were of household workers. There were 59 men and 62 women placed in regular employment during the month.

#### QUEBEC

Employment opportunities, as indicated by orders received at employment offices in the Province of Quebec, were nearly 26 per cent better than in the preceding month and 58 per cent above the corresponding month of last year. There was a gain of nearly 25 per cent in placements when compared with April and of nearly 46 per cent in comparison with May, 1932. All industrial divisions participated in the increase in placements over May of last year, although most of the gain was in the services group and due to expansion in the work of the Women's Divisions. Placements in industrial divisions included: manufacturing, 163; logging, 62; farming, 53; construction and maintenance, 294; trade, 49; and services, 1,962, of which 1,583 were of household workers. Placements in regular employment numbered 746 of men and 1,253 of women.

#### ONTARIO

During the month of May positions offered through employment offices in Ontario were nearly 55 per cent higher than in the preceding month, but only 1 per cent in excess of the corresponding month of last year. There was a gain of nearly 54 per cent in placements when compared with April and a decline of less than 1 per cent in comparison with May, 1932. Although there was only a nominal decrease in placements when compared with May of last year for the province as a whole, there was considerable change in several industrial groups. Construction and maintenance showed the largest increase, and there was also a gain in transportation. All other groups reported declines, that in services being the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 339; logging, 524; farming, 628; transportation, 112; construction and maintenance, 8,692; trade, 319; and services, 4,321, of which 2,008 were of household workers. There were 4,717 men and 1,326 women placed in regular employment during the month.

#### MANITOBA

Employment offices in Manitoba were notified of over 26 per cent less vacancies

during May than in the preceding month and nearly 46 per cent less than during the corresponding month of last year. Similar percentages of decline were reported in placements under both comparisons. Farm placements were more numerous than during May of last year, but in all other groups declines were reported. The losses in construction and maintenance were the largest and were mainly responsible for the adverse change for the province as a whole. Placements by industrial divisions included: farming, 421; construction and maintenance, 499; trade, 39; and services, 874, of which 726 were of household workers. Regular employment was found for 669 men and 375 women during the month.

#### SASKATCHEWAN

The demand for workers, as indicated by orders received at employment offices in Saskatchewan during May, was 5 per cent greater than in the preceding month and over 11 per cent higher than during the corresponding month of last year. There was a gain of nearly 7 per cent in placements when compared with April and of 15 per cent in comparison with May, 1932. An increase in farm placements, with a somewhat smaller gain in construction and maintenance, accounted for the improvement over May of last year. These increases, however, were partly offset by a decline in services. The changes in other groups were unimportant. Placements by industrial divisions included: manufacturing, 49; farming, 1,007; construction and maintenance, 539; trade, 41; and services, 864, of which 559 were of household workers. Placements in regular employment numbered 1,202 of men and 387 of women.

#### ALBERTA

During the month of May, orders received at employment offices in Alberta called for nearly 26 per cent more workers than in the preceding month, but over 10 per cent less than during the corresponding month of last year. There was an increase of nearly 26 per cent in placements when compared with April, but a decline of over 11 per cent in comparison with May, 1932. A loss in placements under construction and maintenance nearly equalled the decline for the province as a whole, but services also showed a decrease. This, however, was offset by gains in farming and logging. Nominal changes only were reported in other groups. Industrial divisions in which most of the placements were effected were: manufacturing, 22; logging, 198; farming, 754; construction and maintenance, 1,182; and services, 546, of which 370 were of house-

hold workers. There were 1,291 men and 294 women placed in regular employment during the month.

#### BRITISH COLUMBIA

Orders received at employment offices in British Columbia during May called for nearly 2 per cent more workers than in the preceding month, but nearly 11 per cent less than during the corresponding month of last year. There was a gain of nearly 2 per cent in placements when compared with April, but a decline of over 10 per cent in comparison with May, 1932. Fewer placements on highway construction than during May of last year was responsible for the adverse change under this comparison, but small declines were also reported in farming, logging and transportation. These losses were partly offset by gains in services and mining. Placements by industrial divisions included: manufacturing, 30; logging, 28; farming, 60; mining, 43; construction and maintenance, 2,436; and services, 676, of which 392 were of household workers. During the month 1,013 men and 197 women were placed in regular employment.

#### Movement of Labour

During the month of May, 1933, the Offices of the Employment Service of Canada effected 13,770 placements in regular employment, 6,505 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 153 were granted the Employment Service reduced transportation rate, 138 going to centres within the same province as the despatching office and 15 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Ontario offices were instrumental in the transfer of 73 persons during May, 72 of whom went to provincial employment and one outside the province. The latter, a gas boat operator, was despatched from North Bay to Rouyn. Provincially, to centres within their respective zones, Port Arthur shipped 43 bush workers, one cook and one cookee; Sudbury, 7 bushworkers, one engineer and one blacksmith, and Fort William, 5 bushmen and 8

lumber workers. Proceeding from North Bay, 3 sawmill workers went to Timmins and one cook to Port Arthur. The Port Arthur zone was also the destination of one mine labourer, conveyed from Timmins. Both the provincial and inter-provincial labour movement in Manitoba during May originated at Winnipeg and comprised the transfer of 16 workers, 3 of whom were conveyed to provincial situations and 13 to other provinces. Those travelling within the province were for employment in the Winnipeg zone and included one farm hand, one carpenter and one barber. Of the workers going outside the province, one chamber maid, one farm hand, 2 restaurant chefs, one machinist, one bushman and 2 camp cooks were bound for the Port Arthur zone while the remaining 5 were farm hands for Saskatchewan rural districts. In Saskatchewan during May one certificate was secured by a teacher at the Regina office for transportation within the same zone. Transfers at the reduced rate effected by Alberta offices during May were 41 in number, of which 40 were provincial and one inter-provincial. Provincially, from Edmonton 3 farm hands, one farm housekeeper, 2 mine workers, 4 carpenters, 9 bushworkers, 4 sawmill hands, one stonemason, 2 cooks, one creamery worker, 4 steamship employees, one engineer, 2 labourers and one freight checker were sent to various sections within the Edmonton zone. The Calgary office in addition, was responsible for the transfer of one farm housekeeper to Drumheller and of 4 farm hands within its own zone. The movement outside the province was of a farm hand going from Edmonton to Saskatoon. Reduced rate certificates granted in British Columbia during May totalled 22, all of which were issued by the Vancouver office to centres within the province. Travelling to employment at various points within the Vancouver zone were 10 mine workers, 2 farm hands, one domestic and one hotel cook, while to Penitction were despatched 2 mine workers, 2 hotel cooks and one farm general and to Kamloops one farm housekeeper and 2 hotel workers.

Of the 153 persons who were conveyed at the Employment Service reduced transportation rate during May, 77 journeyed by the Canadian National Railways, 60 by the Canadian Pacific Railway, 12 by the Pacific Great Eastern Railway, 3 by the Temiskaming and Northern Ontario Railway and one by the Northern Alberta Railway.

## (4) Building Permits Issued in Canada in May, 1933

The value of the building permits issued by 61 cities during May, 1933, was higher by 29.0 per cent than in April, 1933, but lower by 63.5 per cent than in May, 1932. According to statements tabulated by the Dominion Bureau of Statistics, the authorizations amounted to \$2,002,309 as compared with \$1,551,693 in the preceding month, and \$5,488,845 in May, 1932. In connection with these figures, it should be noted that wholesale prices of building materials have been lower in 1933 than in any other year of the record, averaging 75.2 for the first five months, as compared with 79.0 and 83.6 in the same periods of 1932 and 1931, respectively.

Some 50 cities furnished detailed statistics, showing that they had issued almost 300 permits for dwellings valued at approximately \$700,000 and for some 2,100 other buildings estimated to cost over \$1,100,000. In addition, Brantford reported the authorization of an engineering project valued at approximately \$5,000. In April, authority was given for the erection of some 200 dwellings and 1,500

other buildings, valued at approximately \$480,000 and \$950,000, respectively.

Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia reported increases in the value of the permits issued as compared with April, 1933, that of \$229,423 or 34.2 per cent in Ontario being the most pronounced.

As compared with May, 1932, all the provinces registered decreases; of these declines, that of \$975,062 or 88.0 per cent in Manitoba, was most noteworthy.

Each of the four larger cities, Montreal, Toronto, Winnipeg and Vancouver, registered a gain as compared with April, 1933, but a loss as compared with May, 1932. Of the other centres, New Glasgow, Galt, Oshawa, Sarnia, Sault Ste. Marie, Windsor and Woodstock recorded increases in the value of the building authorized as compared with either the preceding month or the same month of last year.

*Cumulative Record for First Five Months, 1933.*—The following table gives the value of the building authorized by 61 cities in May

## ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS AS ISSUED BY 61 CITIES

| 1920..... | 13,082,015                     | 47,640,916                                   | 79.3   | 144.7   |

and in the first five months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first five months of the same years are also given (1926=100).

The aggregate for the first five months of 1933 was lower than in the same period of any previous year of this record. The average index number of wholesale prices of building materials, however, was decidedly lower than in any of the years since 1920.

The accompanying table gives the value of the building permits issued by 61 cities during May and April, 1933, and May 1932. The 35 cities for which records are available since 1910 are marked by asterisks.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, June, 1933, summarized the employment situation as follows:—

Employment at May 22, 1933, showed a further substantial improvement, which extended to almost every industry. The improvement was most marked in mining other than coal mining, building, public works contracting, brick, tile, artificial stone, cement, pottery, iron and steel, tinplate, and metal goods manufacture, engineering, ironfounding, shipbuilding and ship-repairing, the textile, clothing, boot and shoe, and distributive industries, and dock and harbour service.

There was a further decline, however, in employment in coal mining.

There was an appreciable reduction in the percentage of insured workpeople unemployed in all parts of the country except the North-Eastern Division, where a slight increase in the percentage was due to the decline in employment in the coal mining industry. In London and the South-Eastern Counties employment was fair; in South-West England and the Midlands it was slack; while in all other areas it was still bad.

Among the workpeople, numbering approximately 12,808,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at May 22, 1933 (including those temporarily stopped as well as those wholly unemployed), was 20.5, as compared with 21.4 at April 24,

1933, and with 22.1 at May 23, 1932. The percentage wholly unemployed at May 22, 1933, was 16.6, as compared with 17.2 at April 24, 1933, while the percentage temporarily stopped was 3.9, as compared with 4.2. For males alone, the percentage at May 22, 1933, was 23.7, and for females, 12.1; at April 24, 1933, the corresponding percentages were 24.4 and 13.3.

At May 22, 1933, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,998,567 wholly unemployed, 490,243 temporarily stopped, and 94,069 normally in casual employment, making a total of 2,582,879. This was 114,755 less than a month before, and 158,427 less than a year before. The total included 2,103,170 men, 61,957 boys, 371,518 women and 46,234 girls.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at May 22, 1933, was 2,653,852.

### United States

The Bureau of Labour Statistics of the United States Department of Labour tabulate monthly statistics of employment and payrolls based on reports from establishments in 17 major industrial groups. According to the Bureau's statistics of all manufacturing industries a comparison of the May, 1933, index of employment (58.7) with the index of April, 1933 (56.0) shows an increase in employment of 4.8 per cent over the month interval. A similar comparison of the May

pay-roll index (38.9) with the April index (34.9) shows a gain of 11.5 per cent in payrolls between April and May. Comparing employment in May, 1933, with May, 1932, it is seen that the level of employment in May, 1933, is 1.7 per cent below the index of employment in May, 1932 (59.7). The payroll index of May, 1933, compared with the index of May, 1932 (42.5) shows a decline of 8.5 per cent in payrolls over the year interval.

The changes in employment and payrolls in May, 1933, are based on reports supplied by 17,923 establishments in 89 of the principal manufacturing industries of the United States. These establishments reported 2,632,335 employees on their payrolls during the pay period ending nearest May 15, whose combined weekly earnings were \$45,794,311. The employment reports received from these co-operating establishments cover approximately 50 per cent of the total number of wage earners in all manufacturing industries of the country.

*Non-Manufacturing Industries.*—The general improvement in the employment situation between April and May, 1933, was also reflected in a number of the non-manufacturing industries surveyed monthly by the Bureau of Labour Statistics. Increased employment was reported in 9 of the 16 industries surveyed and increased payrolls were reported in 12 industries. The increases in employment in May, 1933, in most instances were greater than the average per cents of change between April and May in the preceding years for which data are available, and, while 7 industries reported declines in employment, the decreases reported in May in several of these industries were not as pronounced as might be expected. For example, the retail trade group which reported a gain of 10.1 per cent in employment in April, due largely to Easter trade, reported a decline of only 2.1 per cent in employment in May, indicating that a great number of employees taken on for Easter business were retained on the payrolls of the reporting establishments.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government with respect to contracts "for construction, remodelling, repair or demolition of any work" is set forth in an Act of Parliament adopted on May 30, 1930, entitled "The Fair Wages and Eight-Hour Day Act, (chapter 20-21, Geo. V). The full text of this measure appeared in the *LABOUR GAZETTE*, April, 1930, page 383. The Fair Wages and Eight-Hour Day Act provides as follows:

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Fair Wages Policy was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Order in Council of April 9, 1924. The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain before hand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

In addition to the requirements of the Fair Wages and Eight-Hour Day Act, government contracts for the construction, remodelling, repair or demolition of any work, contain a number of other provisions for the protection

of the workmen employed, which are sanctioned by the foregoing Orders in Council.

It is further provided in the foregoing Orders in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Orders in Council as "B" conditions, (the conditions of the Fair Wages Orders in Council with reference to building and construction works were designated as "A" conditions), and include the following Fair Wages Clause:

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

Both in the case of contracts for building and construction work, and in the "B" conditions sanctioned by Orders in Council applicable to contracts for the manufacture of certain classes of supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates and working hours.

The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the Department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of certain classes of supplies listed in the Fair Wages Orders in Council it is required that the contractor's premises and the work being performed, under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and

empower the Minister of Labour to deal with any disputes which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been executed by the Governments of Canada recently:

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, etc.)*

Repairing Beattie Street Armoury (electric wiring), Vancouver, B.C. Name of contractor, Hume and Rumble Limited, Vancouver, B.C. Date of contract, May 15, 1933. Amount of contract, \$1,300. A fair wages schedule was inserted in the contract as follows:

| Trade or class of labour    | Rates of wages not less than | Hours of labour not more than |
|-----------------------------|------------------------------|-------------------------------|
|                             | per hour                     | per day                       |
| Carpenters.....             | \$ 0 87½                     | 8                             |
| Wiremen.....                | 1 00                         | 8                             |
| Electricians' helpers.....  | 0 50                         | 8                             |
| Labourers.....              | 0 45                         | 8                             |
| Motor truck driver.....     | 0 45                         | 8                             |
| Driver, team and wagon..... | 1 00                         | 8                             |

Repairing Woodward's Training Wall at Stevenson, B.C. Name of contractor, Coast Quarries Limited, Vancouver, B.C. Date of contract, June 5, 1933. Amount of contract, \$11,995. A fair wages schedule was inserted in the contract as follows:

| Trade or class of labour  | Rates of wages not less than | Hours of labour not more than |
|---------------------------|------------------------------|-------------------------------|
|                           | per hour                     | per day                       |
| Pile driver foreman.....  | \$1 12½                      | 8                             |
| Pile driver engineer..... | 1 00                         | 8                             |
| Pile driver men.....      | 0 90                         | 8                             |
| Boorman.....              | 0 90                         | 8                             |
| Derrick man.....          | 0 90                         | 8                             |
| Labourers.....            | 0 45                         | 8                             |

Construction of an automobile ferry landing at Sidney, Nanaimo District. B.C. Name of contractor, Victoria Pile Driving Co. Ltd., Victoria, B.C. Date of contract, June 27, 1933. Amount of contract, \$4,761.18. A fair wages schedule was inserted in the contract as follows:

| Trade or class of labour | Rates of wages not less than | Hours of labour not more than |
|--------------------------|------------------------------|-------------------------------|
|                          | per hour                     | per day                       |
| Pile driver foreman..... | \$1 12½                      | 8                             |
| Engineer.....            | 1 00                         | 8                             |
| Pile driver man.....     | 0 90                         | 8                             |
| Pile driver boorman..... | 0 90                         | 8                             |
| Bridgeman.....           | 0 90                         | 8                             |
| Timberman.....           | 0 90                         | 8                             |
| Fireman.....             | 0 65                         | 8                             |
| Labourers.....           | 0 40                         | 8                             |

Construction of wooden oil scow for Dredge P.W.D. No. 305. Name of contractor, Star Shipyard (Mercer's) Ltd., New Westminster, B.C. Date of contract, May 29, 1933. Amount of contract, \$4,156.50. A fair wages schedule was inserted in the contract as follows:

| Trade or class of labour           | Rates of wages not less than | Hours of labour not more than |
|------------------------------------|------------------------------|-------------------------------|
|                                    | per hour                     | per day                       |
| Blacksmiths.....                   | \$0 67½                      | 8                             |
| Blacksmiths' helpers.....          | 0 53½                        | 8                             |
| Fitters.....                       | 0 78½                        | 8                             |
| Labourers.....                     | 0 45                         | 8                             |
| Machinists.....                    | 0 67½                        | 8                             |
| Painters.....                      | 0 62½                        | 8                             |
| Riggers.....                       | 0 65½                        | 8                             |
| Ships' carpenters.....             | 0 78½                        | 8                             |
| Ships' joiners.....                | 0 78½                        | 8                             |
| Ships' joiners' foreman.....       | 0 87½                        | 8                             |
| Teamsters.....                     | 0 45                         | 8                             |
| Teamsters with team and wagon..... | 1 00                         | 8                             |
| Truck drivers.....                 | 0 45                         | 8                             |
| Wood caulkers.....                 | 0 81½                        | 8                             |

Deepening and widening entrance channel at Digby, N.S. Name of contractors, Beacon Dredging Co. Ltd., Halifax, N.S. Date of contract, June 22, 1933. Amount of contract, approximately \$12,211.61. The General Fair Wages Clause was inserted in the contract.

Deepening at the lake entrance to the Harbour at Cobourg, Ontario. Name of contractors, Canadian Dredging Co. Ltd., Midland, Ontario. Date of contract, June 2, 1933. Amount of contract, approximately \$9,240. The General Fair Wages Clause was inserted in the contract.

Dredging in the Chenal Ecarte and Sydenham Rivers, near Wallaceburg, Ontario. Name of contractors, The Chatham Dredging and General Contracting Co. Ltd., Chatham, Ontario. Date of contract, June 12, 1933. Amount of contract, approximately \$7,360. The General Fair Wages Clause was inserted in the contract.

Dredging channel and slip approaching wharf and removal of old hull, Belleville, Ontario. Name of contractors, The Randolph MacDonald Co. Ltd., Toronto, Ontario. Date of contract, June 12, 1933. Amount of contract, approximately \$7,885. The General Fair Wages Clause was inserted in the contract.

#### POST OFFICE DEPARTMENT

Following is a statement of payments made in June, 1933, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

| Nature of Orders  | Amount    |
|---|-----------|

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour, are given, with other information of general interest.

### Manufacturing: Food, Drink and Tobacco

TORONTO, ONTARIO. — CERTAIN EMPLOYING BAKERS (JEWISH) AND THE BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION, LOCAL NO. 181.

Agreement to be in effect from April 28, 1933, to May 1, 1934.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September, 1932, page 1018, September, 1931, page 1053, and August, 1930, page 267, with the following exception:

Wages: foreman or first hand \$34 per week, second hand \$30, third hand \$26 (reductions of \$4 per week in each case); jobbers: foreman or first hand 70 cents per hour (formerly 95 cents), second hand 62½ cents (formerly 85 cents), third hand 58 cents (formerly 75 cents).

No part time work to be allowed. Labourers not to do work of the bakery trade.

The provisions as to arbitration of disputes in the former agreement are not in this one.

### Manufacturing: Iron, Steel and Products

TORONTO, ONTARIO.—CERTAIN WELDING SHOPS AND THE INTERNATIONAL BROTHERHOOD OF BOILERMAKERS, IRON SHIPBUILDERS AND HELPERS OF AMERICA, LOCAL NO. 637.

The agreement which was summarized in the LABOUR GAZETTE, September, 1932, page 1018, has been renewed from June 1, 1933, to June 1, 1934, with the following exception:

Wages for boilermakers, oxy-acetylene and electric welders 65 cents for shop work and 80 cents for field work (formerly 75 cents for shop work and \$1 for field work).

### Manufacturing: Pulp, Paper and Paper Products

FORT WILLIAM, ONTARIO.—GREAT LAKES PAPER COMPANY, LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF PAPERMAKERS, THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS AND VARIOUS OTHER UNIONS.

Agreement to be in effect from May 16, 1933, to May 1, 1934, and thereafter from year to year, subject to notice.

The agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, October, 1932, page 1110, with the exception of the wage schedule:

The wage schedule is reduced as follows: on the rate of \$1.56 per hour, a reduction of 14 cents; on \$1.40 and \$1.45, 13 cents; on \$1.29, 12 cents; on 96 cents to \$1.03, 9 cents; on 83 cents, 7 cents; on 77 cents, 5 cents; on 64 to 73 cents, 4 cents; on 50 to 59 cents, 3 cents; on 38 to 48 cents, 2 cents.

### Manufacturing: Printing and Publishing

QUEBEC, QUEBEC.—CERTAIN NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 302.

Agreement to be in effect from February 14, 1933, to February 14, 1934, and from year to year, subject to notice.

Hours: 48 per week for day work and 45 for night work.

Overtime: time and one-half.

Wages: \$30.50 per week for day work and \$32.50 for night work (reductions of \$2 per week from the previous rate).

Day workers working 4 hours or less in a week to be paid 67 $\frac{1}{4}$  cents per hour and to be paid time and one-half for overtime in any day.

MONTREAL, QUEBEC.—PUBLISHERS OF FRENCH DAILY NEWSPAPERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION LOCAL NO. 145 (JACQUES CARTIER).

The agreement which was summarized in the LABOUR GAZETTE, September, 1932, page 1018, August, 1929, page 925 and July, 1925, page 724, has been renewed without change to September 15, 1934.

Wages for journeymen are unchanged at \$43 per 48-hour week for day work and \$47 per 45 hour week for night work.

TORONTO, ONTARIO.—FAIR SHOP EMPLOYING PRINTERS AND BOOKBINDERS' ASSOCIATION OF TORONTO AND THE TORONTO PRINTING PRESSMEN AND ASSISTANTS' UNION NO. 10 (INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION).

Agreement to be in effect from May 1, 1933, to April 30, 1934, and thereafter from year to year until notice.

Union members to be employed.

Hours: regular hours to be 44 per week, but at the employers' option, workers may be employed 5 days per week with the plant in operation 6 days.

Overtime: time and one-half. Work on Sundays and on seven named holidays, double time.

The following wage scale is for day work. (Night shifts to be paid 15 per cent over day rate.)

Wages: pressmen not less than 75 cents per hour, press assistants 58 $\frac{1}{2}$  cents, platen press feeders 30 cents. Apprentice feeders on cylinder presses 30 cents with 10 cent increase twice a year until the press assistants' scale is reached.

Wages for cylinder pressmen operating two-colour cylinder press \$2 over minimum pressmen's scale.

Wages per week on rotary, web feed, pamphlet, catalogue and magazine presses.—Single deck or single web: press only capable of running cheap work consisting of type matter and line cuts \$33 for first pressman and \$27.75 for rotary assistant; press capable of doing catalogue or magazine work printing one colour two sides or two colours one side and one colour reverse side \$37 for first pressman, \$35 for second pressman and \$27.75 for rotary assistant. Double deck or two webs or more: press capable of doing catalogue or magazine work, printing one colour two sides \$40 for first pressman, \$35 for second pressman and \$27.75 for rotary assistant; press capable of doing catalogue or magazine work printing two colours one side and one colour reverse side or two colours two sides \$42 for first pressman, \$35 for second pressman and \$27.75 for rotary assistants.

65978-5

TORONTO, ONTARIO.—FAIR SHOP EMPLOYING PRINTERS AND BOOKBINDERS' ASSOCIATION OF TORONTO AND THE TORONTO BOOKBINDERS AND BINDERY WOMEN, LOCAL NO. 28 (INTERNATIONAL BROTHERHOOD OF BOOKBINDERS).

Agreement to be in effect from May 1, 1933, to April 30, 1934, and thereafter from year to year until notice.

Union members to be employed.

Hours: regular hours to be 44 per week, but at the employer's option each employee may work only 5 days per week, with six day plant operation whenever necessary.

Overtime: time and one half; work on Sundays and seven named holidays, double time.

The following wage scale is for day work. (Work on night shifts to be paid 15 per cent over the regular rate.)

Wages for journeymen bookbinders 75 cents per hour. Wages for apprentices from \$12.50 per week during first half of third year to \$25 during second half of fifth year. Wages for journeymen bookbinders 35 cents per hour. Female apprentices to be paid 28 cents per hour with an increase of 10 per cent every six months until journeymen's scale is reached.

Apprentices limited to one for first five journeymen employed and one for each additional four journeymen or major fraction thereof. The same limits are set in the number of female apprentices to journeymen.

TORONTO, ONTARIO.—THREE DAILY NEWSPAPER PUBLISHERS AND THE MAILERS' UNION NO. 5 (INTERNATIONAL TYPOGRAPHICAL UNION).

The agreement which came into effect June 1, 1929, and was summarized in the LABOUR GAZETTE, June, 1930, page 715, was renewed in 1932, to May 31, 1933, with an amendment making the wage rate per week for night work the same as for day work, that is \$41. The agreement was again renewed from June 1, 1933, to May 31, 1934, with the following exception:

Wages for journeymen \$37.50 per week for both day and night work (a reduction of \$3.50 per week). Wages for apprentices from \$16 per week during first half of third year to \$25 during last half of fifth year (reductions of from \$1 to \$2 per week).

Hours are unchanged at 48 per week for day work and 42 for night work.

HAMILTON, ONTARIO.—NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 129.

The agreement which was summarized in the LABOUR GAZETTE, October, 1932, page 1111, and March, 1930, page 325 has been renewed from January 1, 1933, to December 31, 1933, with the following change:

Wages for journeymen have been reduced from \$43.50 to \$37.75 per week for day work and from \$46.50 to \$40 per week for night work.

Hours are unchanged at 47 per week for both day and night work.

**WINNIPEG, MANITOBA.—PUBLISHERS OF TWO DAILY NEWSPAPERS AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS' UNION, LOCAL No. 59.**

Agreement to be in effect from May 2, 1933, to November 2, 1933, and thereafter until notice of change from either party.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, July, 1932, page 818, and September, 1929, page 1050, with the following exception:

Wages for journeymen stereotypers \$39 per week (a reduction of \$3 per week). Apprentices from \$15.20 per week during first year to \$30.40 per week during fifth year (reductions of 5 per cent for apprentices).

**EDMONTON AND CALGARY, ALBERTA.—NEWSPAPER PUBLISHERS OF EDMONTON AND CALGARY AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCALS NOS. 604 AND 449.**

Agreement to be in effect from May 16, 1933, to May 15, 1934, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, July, 1932, page 818, and July, 1929, page 804, with the following exceptions:

Wages per hour for journeymen: 85 cents (formerly 96 cents); night scale \$2.40 per week additional and lobster shift \$4 per week additional to regular scale.

Wages for apprentices from 25 per cent of journeymen's scale during first two years to 65 per cent during fifth year.

Certain other changes were made in working arrangements, payment for holidays, arbitration proceedings, etc.

The regular hours are unchanged at 45 per week.

**Construction: Buildings and Structures**

**HALIFAX, N.S.—CERTAIN CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 625.**

Agreement made following strike reported on page 684 of this issue, to be in effect from June 7, 1933, to April 30, 1935, and thereafter from year to year until notice.

Only local union members to be employed.

Hours: 8 per day, with a 44-hour week.

Overtime: from 5 p.m. to 10 p.m. Monday to Friday, and from 1 p.m. to 5 p.m. on Saturdays, time and one half; work after these hours and all work on Sundays and holidays, double time.

Wages for journeymen electrical workers: 80 cents per hour (a reduction of 5 cents per hour). A journeyman in charge of two or more journeymen to be paid 10 cents per hour extra.

Wages for apprentices: from 20 cents per hour during second year to 50 cents during fifth year.

Not more than one helper allowed to a journeyman.

For work out of the city, fare, board and travelling time to be paid by employer.

Any grievance to be reported to the president or business agent of the union.

**ST. PROSPÈRE, QUEBEC.—CERTAIN CONTRACTORS AND THE NATIONAL CATHOLIC UNIONS OF CONSTRUCTION WORKERS OF THREE RIVERS, QUEBEC.**

This agreement, which covers the work of repairing a church, came into effect June 6, 1933, and remains in effect until the completion of the contract.

Only members of the unions signing the contract or other competent workers who will join the union or residents of the parish of St. Prospère to be employed.

Hours: 10 per day.

Overtime: time and one half.

Wages: As this contract is for work outside the city of Three Rivers, the wage rates are less than the union scales for work in the city of Three Rivers.

Wages per hour: bricklayers, masons, plasterers, terrazzo setters, tile and mosaic layers, 55 cents; teamster furnishing one or two horses 45 cents; carpenters and joiners, plumbers and steamfitters, tinsmiths, pointers and cement finishers, structural steel workers 40 cents; electricians, painters, stationary engineers on portable machines, firemen, metal lathers 35 cents; mortar mixers and celanite mixers and layers of reinforced concrete, layers of iron and earthenware pipes, junior journeymen plumbers, 30 cents; plaster mixer and hod carriers 25 cents; labourers 20 cents; (Wood lathers to be paid \$2.50 per thousand.)

Business agent to have access to lists of employees and to the job. Contractors are subject to fines if agreement is broken or if workers are employed who are not union members or residents of the parish.

Any dispute to be referred to a joint committee whose decision will be final and no stoppage of work pending settlement.

**MONTREAL, QUEBEC.—CERTAIN ROOFING CONTRACTORS AND THE SHEET METAL WORKERS INTERNATIONAL ASSOCIATION, LOCAL No. 116.**

Agreement to be in effect from May 1, 1933, to October 30, 1933.

This agreement is the same as the one previously in effect and summarized in the *LABOUR GAZETTE*, October, 1932, page 1111.

The wages and hours are unchanged at 65 cents per hour and a 44-hour week.

**TORONTO, ONTARIO.—TORONTO SOCIETY OF DOMESTIC, SANITARY AND HEATING ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 46.**

Agreement to be in effect from June 1, 1933, to April 30, 1934, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, March, 1932, page 347, with the following exception:

Wages per hour: journeymen plumbers and steamfitters 85 cents (a reduction of 15 cents per hour). Wages for fifth year junior mechanics 55 cents (a reduction of 10 cents per hour).

**TORONTO, ONTARIO.—CUT STONE SECTION OF THE BUILDERS' EXCHANGE AND THE TORONTO LOCAL OF JOURNEYMEN STONECUTTERS' ASSOCIATION OF NORTH AMERICA.**

The agreement which was summarized in the *LABOUR GAZETTE*, July, 1932, page 819, has been renewed from May 1, 1933, to April 30, 1934, with the following exception:

Wages for journeymen stonecutters have been reduced from \$1 to 87½ cents per hour.

**HAMILTON, ONTARIO.—THE MASON AND GENERAL CONTRACTORS AND THE GENERAL CONTRACTORS OF THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES, HAMILTON BRANCH, AND THE BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION, LOCAL No. 1.**

Agreement made following the strike reported on page 684 of this issue. Agreement to be in effect from June 14, 1933, to April 30, 1934. Notice of change to be given before the expiration date.

Only union members to be employed.

Hours: 8 per day, a 5-day week of 40 hours. (Previously the hours were 44 per week.)

Overtime: only emergency work to be done between 5 p.m. and 8 a.m. and will be paid at time and one-half rate. All work done between 5 p.m. Friday and 8 a.m. Monday and work on holidays, double time.

Wages per hour for bricklayers and masons: 90 cents (a reduction of 20 cents per hour).

Wages for apprentices to be according to Bricklayers' Apprentice Committee of Hamilton. Disputes to be settled by arbitration.

**HAMILTON, ONTARIO.—HAMILTON MASTER PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 67.**

Agreement to be in effect from May 1, 1933, to April 30, 1934, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, June, 1932, page 717, June, 1931, page 710, and September, 1929, page 1053, with the following exceptions:

Wages for journeymen plumbers: 90 cents per hour (a reduction of 10 cents per hour).

Any apprentice after serving four years and passing the examination to be paid 70 per cent of journeymen's rate for fifth year and after that, the journeyman's rate.

**CALGARY, ALBERTA.—CALGARY ASSOCIATION OF SANITARY AND HEATING ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 496.**

Agreement to be in effect from May 1, 1933, to April 30, 1934, or for another year if no notice of change is given.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, September, 1932, page 1020, and September, 1931, page 1037, with the following exceptions:

Wages per hour for journeymen plumbers and steamfitters: \$1 (a reduction of 5 cents per hour).

Overtime: when necessary to complete a job, one-half hour extra may be worked at regular rate. Work from 5 p.m. to 11 p.m., time and one-quarter; work from 11 p.m. to 8 a.m., time and one-half, except for work after 11 p.m. lasting two hours or less, when double time will be paid.

For work out of the city, travelling time at one-half of regular day wage, except for work lasting three days or less when travelling time will be paid at regular day rate.

A new Act was promulgated recently by the German government relating to labour courts, conciliation boards and occupational committees for home industries. The work of the labour courts was outlined in the *LABOUR GAZETTE*, December, 1931, page 1280, and previous issues. The new legislation is stated to be of a transitional character, and intended to adapt the composition of the courts, boards and committees to the requirements of the new order in Germany, until such time as a new trade union charter has been completed.

The annual six-months' contest for the "Pulp and Paper of Canada" trophy for the safest mill in Canada will run from July first to December thirty-first, 1933. The contest, will, as usual, be divided into two classes, so as to give both large and small mills equal opportunity. Rules for the contest are being

formulated and will be sent directly to the mills. The results of the past seven years during which this contest has been held have shown an increasing interest in accident prevention work and definitely helpful results from this competition.

Mr. Charles Beattie has been appointed president of the Canadian Association of Railway Enginemen, Conductors, Trainmen, Yardmen, Telegraphers and Despatchers, in succession to Mr. Syd. White, recently deceased. The new president was born in Scotland, where he worked on the Caledonian Railway for 12 years, coming to Canada in 1912. In this country he started railway work as fitter, afterwards becoming a fireman and engineer, and was vice-president of the C. A. R. E. before succeeding to the presidency. Mr. Beattie has had a long experience in negotiating wage schedules.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1933

### Cost of Living, Prices of Staple Articles and Index Numbers

THE cost of the weekly family budget in terms of retail prices was again somewhat lower, due mainly to a decline in rent and to lower prices for anthracite coal, while the Dominion Bureau of Statistics index number of wholesale prices continued the advance which commenced in March, the increase being due mainly to higher prices for grains and certain raw materials.

In retail prices the cost per week of a list of twenty-nine staple foods in terms of the average retail prices in sixty-nine cities was \$6.84 at the beginning of June, as compared with \$6.86 for May; \$6.79 for June, 1932; \$8.16 for June, 1931; \$11.10 for June, 1930; \$16.92 for June, 1920 (the peak); and \$7.49 for June, 1914. The most important advances occurred in the prices of beef, pork, flour and potatoes, while the price of butter was substantially lower. Including the cost of fuel and rent with that of foods the total budget was \$15.41 at the beginning of June as compared with \$15.57 for May; \$16.20 for June, 1932; \$18.36 for June, 1931; \$21.44 for June, 1930; \$26.92 for July, 1920 (the peak); and \$14.27 for June, 1914. Fuel was lower, due to substantial declines in the price of anthracite coal in some localities. Decreases in rent were reported from several cities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, again advanced being 67.6 for June as compared with 66.9 for May; 66.4 for June, 1932; 71.8 for June, 1931; 100.1 for June, 1926; 164.3 for May, 1920 (the peak); and 64.4 for June, 1914. One hundred and twenty-one quotations advanced, sixty-four declined and three hundred and seventeen were unchanged. Since the upward movement commenced in March the level of wholesale prices as measured by this index has advanced six per cent the greatest percentage increase in a similar period since 1920.

In the grouping according to chief component materials four of the eight main groups advanced and four were lower. The groups which advanced were: the Vegetables and Vegetable Products group, because of higher prices for grains and potatoes, which more than offset lower prices for flour, bran, shorts and coffee; the Fibres, Textiles and Textile Products group, mainly because of higher prices for raw cotton, raw silk, raw wool, worsted cloth yarns and woollen cloth; the Wood, Wood Products and Paper group, due

to price increases for lumber; and the Non-Ferrous Metals and their Products group owing chiefly to higher prices for copper, lead, silver, tin and zinc. The groups which declined were: the Animals and their Products group, because of decreases in the prices of calves, hogs, lambs, fresh meats, milk and butter which more than offset higher prices for hides, cured meats and eggs; the Iron and its Products group, because of reductions in the prices of pig iron, steel tank plates, and steel sheets; the Non-Metallic Minerals and their products group, because of lower prices for coal; and the Chemical and Allied Products group, because of declines in the prices of zinc oxide and citric acid.

In the grouping according to purpose consumers' goods declined, decreased prices for milled products, milk and its products and drugs more than offsetting higher prices for potatoes, onions, eggs and fish. Producers' goods were considerably higher because of advances in the prices of materials for the textile and clothing industries, for the leather goods industries, for the metal working industries and for the milling and other industries.

In the grouping according to origin raw and partly manufactured goods advanced while fully and chiefly manufactured goods declined. Canadian farm products, articles of marine origin, articles of forest origin and articles of mineral origin were higher.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of June of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers, and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition,

(Continued on page 742)

## COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\* Prior to 1926 number of commodities was 236.

(Continued from page 734)

favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But, as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expendi-

ture on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

## Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and

electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### Retail Prices

Beef prices were again slightly higher, sirloin steak averaging 22 cents per pound in June, and 21.6 cents in May and rib roast 16.7 cents per pound in June as compared with 16.5 cents in May. The prices a year ago were 25.5 cents for the former and 20.6 cents for the latter. Veal was down from an average price of 12.1 cents per pound in May to 11.8 cents in June, decreases being most pronounced in Ontario. Both fresh and salt pork advanced, the former being up from 15.1 cents per pound in May to 15.7 cents in June and the latter from 14.6 cents per pound to 15.1 cents.

The price of milk was unchanged at an average price of 9.1 cents per quart, decreases, however, being reported from Winnipeg and Medicine Hat and an increase at Brantford. Butter was again lower in most localities, the price for dairy being down from an average of 24 cents per pound in May to 20.9 cents in June and creamery from 27 cents per pound in May to 23.9 cents in June. Cheese was also slightly lower at an average price of 19.3 cents per pound as compared with 19.8 cents in May.

The price of bread has remained unchanged since March at an average price of 5.5 cents per pound. Flour was slightly higher in many localities, the price averaging 3 cents per pound in June as compared with 2.7 cents in May. Onions were seasonally higher at an average price of 5.6 cents per pound in June as compared with 3.9 cents in May. The price of potatoes was somewhat higher in most localities, the price averaging \$1.03 per ninety pounds as compared with 95 cents in May. The price a year ago was 64 cents per ninety pounds. Granulated sugar was up from an average of 7.8 cents per pound in May to 7.9 cents in June. This is an advance of 2 cents per pound from the low level of

5.6 cents in March. The price of anthracite coal declined from an average of \$15.29 per ton in May to \$14.79 in June. Substantial decreases were reported from many localities. The price of bituminous coal and wood showed little change. Lower rates for rent were reported from several cities.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

The prices of grains for the most part were considerably higher. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, advanced from an average of 63.3 cents per bushel in May to 66.8 cents in June. The high price for the month was 79.1 cents reached on the 27th, which is the highest level reached since October, 1930. The low level was 62.1 cents per bushel reached on the 8th. Unfavourable weather conditions in Australia and North America were said to be factors in the advance in price. In coarse grains western barley was up from 36.1 cents per

| June 1933....  | 93   | 142                  | 131  | 107           | 160           | 120           |

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel 5%; Rent, 18½%; Clothing, 18½%; Sundries, 20%. † Revised.

bushel to 37.5 cents, flax from \$1.10 per bushel to \$1.35, rye from 44.9 cents per bushel to 52.8 cents and oats from 28.3 cents per bushel to 29 cents. The price of flour at Montreal was 30 cents per barrel lower at \$5.10. Bran and shorts at Montreal also were lower, the former falling from \$18.17 per ton to \$16.90 and the latter from \$19.13 per ton to \$17.79. Raw sugar at New York was up from \$1.49 per cwt. to \$1.53, while granulated at Montreal was unchanged at \$6.37 per cwt. Ceylon rubber at New York was up from 5.7 cents per pound to 6.9 cents. Increasing consumption in the United States was said to be an important factor in the movement. In live stock choice steers at Toronto were slightly lower at \$5.10 per hundred pounds. Veal calves at Toronto were down from \$5.74 per hundred pounds to \$5.33 and at Winnipeg from \$5.14 per hundred pounds to \$4.37. Bacon hogs at Montreal were down from \$6.09 per hundred pounds to \$5.96, the same grade at Winnipeg declining 17 cents per hundred pounds to \$5.05. Lambs at Montreal declined from \$12.21 per hundred pounds to \$9.08 and at Toronto from \$10.63 per hundred pounds to \$9.22. The decline in live stock prices was said to be due in part to the large supplies

on the market. Fresh eggs at Montreal were 2 cents per dozen higher at 21 cents, while at Toronto the price advanced from 18½ cents per dozen to 20½ cents. Creamery butter at Montreal declined from 22.3 cents per pound to 20.9 cents and at Toronto from 22.2 cents per pound to 21.1 cents. Cold storage holdings at the beginning of June as compared with the beginning of May were up from 1,943,000 to 5,266,000 pounds. This latter figure is about 21 per cent higher than at the beginning of June, 1932. Raw cotton at New York advanced from 9.9 cents per pound to 10.5 cents in Canadian funds. The advance was said to be due largely to the carrying out of the acreage reduction program in the United States together with an increase in foreign demand. Raw silk at New York was up from \$1.89 per pound to \$2.64. In non-ferrous metals electrolytic copper advanced from \$8.93 per hundred pounds to \$9.70, copper sheets from 16.9 cents per pound to 18.1 cents, tin from 44½ cents per pound to 53½ cents and silver at New York from 38.9 cents per ounce to 39.6 cents in Canadian funds. United States anthracite coal was down from \$11.85 per ton to \$11.40.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE accompanying tables, which appear quarterly, give the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries. The following notes afford information as to significant changes and conditions affecting prices in these and other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1924=100, was 59.7 for May, an increase of 2.2 per cent for the month. Among foods, a substantial increase in cereals was partly offset by a slight decrease in meat and fish. The industrial materials groups all showed increases with the exception of coal which declined 5.4 per cent for the month.

The *Statist* index number, on the base 1867-1877=100, was 80.9 at the end of May, an advance of 3.1 per cent over the previous month. The advance was confined almost en-

tirely to non-foods, minerals showing an increase of 7.9 per cent, textiles of 8.1 per cent and sundries of 5.0 per cent.

**COST OF LIVING.**—The Ministry of Labour's index number, on the base July, 1914=100, was 136 at June 1, which is the same as at May 1, and shows practically no change for the month in any of the groups making up the index number.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Office, on the base 1914=100 (gold basis), was 78 for May, showing no change from April. A decrease in foods due to a sharp decline in animal foods was offset by an advance in industrial materials extending to all three groups.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base 1913=100, was 91.9 for May, an advance of 1.3 per cent from the April level. Agricultural products were 2.9 per cent higher and colonial products 0.8 per cent lower than for April. Among industrial materials, rubber was

22.2 per cent advanced, non-ferrous metals 8.1 per cent and textiles 5.9 per cent. Several other groups however showed small declines.

**COST OF LIVING.**—The official index number on the base 1913=100, was 118.2 for May, an increase of 1.4 per cent over April, due entirely to higher food prices, as heat and light and clothing were slightly lower.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number on the base 1926=100, was 62.7 for May, an increase of 3.8 per cent for the month. Of the ten groups, all advanced with the exception of fuel and lighting materials which declined. The greatest increases were in farm products amounting to 12.8 per cent and in hides and leather, amounting to 10.8 per cent.

The *Annalist* index number, on the base 1913=100, was 94.4 for June, an increase of 4.3 per cent for the month. The greatest increase was in the textile group which amounted to 19 per cent according to the provisional figure for this group. Substantial increases were also noted in farm products, food products, metal and miscellaneous commodities.

*Bradstreet's* index number, which is the sum totals of the prices per pound of 96 commodities of common consumption was \$8.0214 at June 1, a gain of 14.8 per cent for the month, which is the largest monthly increase recorded by this index number since August, 1919.

*Dun's* index number, which is based on the estimated cost *per capita* of a year's supply of commodities in wholesale markets, was \$139.931 at June 1, an advance of 4.6 per cent. Of the seven groups, all advanced except meat which showed a decline. The greatest advance in any one group was in clothing amounting to 17 per cent.

*Irving Fisher's* index number, on the base 1926=100, was 57.2 for April, 60.3 for May and 63.7 for June.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base 1923=100, was 72.1 for May, an advance of 0.8 per cent over the April level, due to an increase of 3.6 in food prices, and a fractional increase in sundries. On the other hand, housing and fuel and light were lower than for April.

The index number of the Department of Labour and Industries, Massachusetts, on the

base 1913=100, was 119.7 for May, an increase of 0.7 per cent over the April level, due to increased prices for food and clothing.

### Other Countries

#### WHOLESALE PRICES:—

The official index number for Peru, on the base 1913=100, was 174 for March and 179 for April.

The official index number for Austria, on the base—first half of 1914=100, was 107.1 for March, 107.4 for April, 107.6 for May and 109.0 for June.

The official index number for Czechoslovakia, on the base July, 1914=100, was 95.5 for March, 94.6 for April and 96.3 for May.

The official index number for Denmark, on the base 1913=100, was 123 for March, 122 for April and 123 for May.

The official index number for Norway, on the base 1913=100, was 121 for each of the three months March, April and May.

The index number of the Commerce Department, Sweden, on the base 1913=100, was 105 for March and the same for April.

The index number of the National Tariff Commission for China, on the base 1926=100, for the first four months of the year was 108.7, 107.8, 107.1 and 104.6 respectively.

#### COST OF LIVING:—

The index number of the cost of living at Santiago, Chile, on the base March, 1928=100, for the first four months of the year was 135, 133, 134 and 136 respectively.

The official index number for Austria on the base July, 1914=100, was 104.3 for March, 104.1 for April, 104.6 for May and 105.8 for June.

The official index number for the Irish Free State, on the base July, 1914=100, was 148 for May.

The index number of the cost of living in Milan, Italy, on the base June, 1927=100, for the first four months of the year was 78.83, 78.50, 77.88 and 76.70 respectively.

The official index number for Norway, on the base July, 1914=100, was 147 for each of the first five months of the year.

The official index number for Sweden on the base July, 1914=100, was 153 for April.

The official index number for Switzerland, on the base June 1914=100, was 132 for March and 131 for April.

The official index number for South Africa, on the base 1910=1000, was 1236 for March and 1243 for April.

TABLE I.—INDEX NUMBERS OF RETAIL PRICES AND COST OF LIVING IN CANADA AND CERTAIN OTHER COUNTRIES  
(Base figure 100 except where noted)

## RECENT LEGAL DECISIONS AFFECTING LABOUR

**Power of Workmen's Compensation Board to levy Assessments for Medical Aid**

**A**N employing firm in British Columbia sought an injunction against the assessment on individual classes of industry made by the Workmen's Compensation Board for the purpose of making up the deficiency which had resulted from the Board's having under-estimated the money required to pay the cost of medical aid for the year 1931. The plaintiff's claim was denied by Mr. Justice Murphy, and, on appeal by the plaintiff, this judgment was affirmed by the British Columbia Court of Appeal.

Chief Justice Macdonald pointed out that the scheme of the Workmen's Compensation Act was to divide industries into various classes according to the risk involved in the work carried on by each class, and to make assessments on each class corresponding to hazards in the different industries. Section 33 (2) of the Act, which provides that additional amounts required for medical aid shall be provided by the Board by means of assessment upon employers generally in all industries, did not, he observed, require that such assessments be made on employers generally engaged in all industries but rather on the different classes into which industry was divided.

"It is conceded by the Board," the Chief Justice said, "that all compensation for accidents in any one year shall be provided for out of the collections for that year, and it is provided that an adjustment should be made before March 1 of the succeeding year of any differences between the estimates of the actual requirements and the actual requirements, the employers to make up differences and the Board to refund surpluses. The Board's contention is that these provisions are directory only and that it would be impossible to carry on if it were otherwise. That section 43 is not imperative appears particularly from the language of it which requires the deficiency to be made up from employers, owing to circumstances over which the Board has no control such as those mentioned in the statement of defence.

"The Act deals with matters of great magnitude requiring the exercise of the highest consideration by the Board and because of this the Legislature reposes in the Board's discretion in many matters by giving them exceptional powers such as the responsibility of deciding without review upon all questions of fact and law, and while the

present question is not one of those but one of jurisdiction the question of deciding that s. 43 is imperative or not is not free from doubt and ought to be decided in accordance with the spirit of the whole Act, otherwise mistakes in the assessments or in the adjustments at March 1 of the sums required to meet obligations of the Board would lead to grave confusion and injustice, not only to the Board, but to the beneficiaries under the Act. For this reason, and for reasons mentioned by the learned trial Judge in his judgment, with which I entirely agree, I think the plaintiffs have failed to make out their case, and would, therefore, dismiss the appeal."

Mr. Justice McPhillips said: "This appeal calls for the consideration of an Act with undoubtedly very complicated provisions when one considers the great field of industries covered—it will only be after the lapse of considerable time that it can be looked upon as a well defined code—and grounds for disagreement reach the vanishing point—that time has not yet been reached. Upon full consideration of the matter called in question in this appeal—the Court being assisted by very able argument of counsel upon both sides—counsel for the appellants in my opinion has failed to establish that the course adopted by the Board was not the correct one.

"We have a very able judgment from Mr. Justice Murphy, who sustained the action of the Board in making the challenged assessments. The Workmen's Compensation Board is comprised of three gentlemen appointed by the Government of British Columbia for the carrying out of very extensive powers—the ambit of the Act is very far reaching and covers the main industries of the province and reserves to the Board amongst other things the sole determination of all questions of liability for injuries to workmen in all these industries inclusive of even marine officers and sailors upon ships sailing out of the ports of British Columbia, the operators of the ships being resident in British Columbia—and provision for dependents of workmen in case of death—without it being necessary to establish negligence where death ensues—in discharge of their duty. Here we have a question of the jurisdiction of the assessments of the Board.

"In passing I might make reference to a very notable case where the jurisdiction of the Board was called in question in *Workmen's Compensation Board v. C. P. R.* (1919) (LABOUR GAZETTE, June, 1932, page 662). Upon

appeal to the Privy Council in that case their Lordships of the Privy Council decided that under the Act the dependents of the officers and of the crew were entitled to compensation under the Act. It was the case of the loss in foreign waters (Alaska, U.S.A.) of the ss. *Sophia* of the C.P.R.—ship, passengers and crew all lost, not one survivor—the Workmen's Compensation Board there had held that the dependents were entitled to compensation. The railway company disputing that decision brought an action against the Board and obtained an *interim* injunction—later the action went to trial and it was held that there was no jurisdiction authorizing the paying of compensation—the Board appealed and this Court by a majority (I dissented) upheld the Court below; then the case went on appeal to the Judicial Committee with the result that their Lordships of the Privy Council reversed the decisions of the Courts below—Viscount Haldane delivering the judgment of their Lordships upholding the Act and the validity of the right to compensation. Further, in passing, it may be said that the Workmen's Compensation Board was then constituted as it is now—the chairman (Mr. Winn, K.C.) being a member of the bar of long and high standing and the other two members of parliamentary and extensive industrial experience—all of whom devote their whole time to the administration of the Act. My excuse for speaking somewhat extrajudicially is to indicate that I place very great reliance upon the Board and its decisions—when we have had a history which redounds to their skill and ability now extending over some years in administering the provisions of the Act—with so little litigation ensuing. Upon a careful consideration of all the points raised and calling for decision in this appeal I do not consider that I can usefully add any other reasons than those given by the learned trial Judge whose judgment is under appeal to this Court and that is one upholding the Board in all that it has done.

"I would uphold the judgment of the learned trial Judge—being of the opinion that the Board proceeded rightly in making the assessments and within its jurisdiction and with a proper understanding of its legal authority conferred under the provisions of the Act—I see here no departure from the true principles of construction of statute law. It follows, that in my opinion, the appeal should be dismissed and the action dismissed."

*Merrill Ring Wilson Ltd. versus Workmen's Compensation Board* (British Columbia), 1933, *Diminution Law Reports*, vol. 2, page 650.

### Employee's Negligence and Employer's Liability

A workman was employed by the owner of an office building at Toronto in the capacity of janitor and caretaker, with living quarters in the building. He was also required to attend to all minor repairs and to report to his employer any defect in the building. In May, 1930, he fell while he was cleaning a window on the fourth floor, and was seriously injured, it being alleged that his fall was caused by the defective condition of the wooden sill of the window. Action to recover damages was commenced by the workman, but in December, 1931, he died as the result of pneumonia, his death not being caused by the accident. The action was then revived in the name of the administratrix of the deceased as plaintiff. At the trial the jury allowed damages of \$12,000 finding that the accident was caused by the defective condition of the sill, that the plaintiff was acting within the scope of his employment at the time, and that he had not been guilty of negligence contributing to the accident.

The Court of Appeal allowed the appeal of the employer against this judgment.

Mr. Justice Middleton pointed out that the deceased had not adopted the ordinary method of cleaning windows when the accident happened but had gone partly outside on to the outer sill to clean the panes; that the defective condition of the sill was not apparent without a thorough examination; and that it was the deceased's duty to report any defect to the managers of the building.

"The case", his Lordship continued, "turns upon the provisions of Part II of The Workmen's Compensation Act, R.S.O. 1927, ch. 179, secs. 119 to 121. The entire statute is possibly misnamed, for while Part I is in one sense a Workmen's Compensation statute, the Act is more truly an Employer's Liability Act. It imposes a liability upon every employer to every employee except in the cases of the industry of farming, and domestic and menial servants. The Act is not confined to the case of accidents occurring in factories, for industry is defined as including any 'establishment, undertaking, trade and business,' so that the office building in this case unquestionably falls within the provisions of the Statute. Part I deals with the very great majority of industrial establishments. These are limited in schedules 1 and 2 of the Act, and in addition this Part will apply to such industries as are added to these schedules by direction of the Board under the Statute (Section 117). It is of significance that by section 2 the indemnity given to the workman under

Part I is for every personal injury by accident arising out of and in the course of the employment, and accident as defined by the interpretation clause includes a wilful and an intentional act, not being the act of the workman.

"It was well realized by the framer of the Act that cases falling under Part I would by no means exhaust the whole category of accidents, and that there would be many cases that would not be met by Part I and which should not be left to the rigour of the common law under the exception of farm and domestic and menial servants, under section 122. These, it was intended, should be dealt with by affording to the employee a remedy under a provision based upon, yet widely different from, the provisions of the old Provincial Statute known as the Workmen's Compensation for Injuries Act, R.S.O. 1914, ch. 146 and the Imperial Statutes. The result was what is found in sections 119 to 121.

"The common law defences of common employment, voluntary assumption of risk, and negligence of fellow-servants and contributory negligence are abolished, contributory negligence, however, being directed to be taken into account in assessing damages. But far more important is the way in which liability is imposed upon the master. Under the old Ontario Act and under the Imperial Acts, there is liability where a personal injury is caused to a workman by reason of any defect in the condition or arrangement of the ways, works, machinery, plant, buildings or premises connected with or intended for or used in the business, but it is expressly stipulated that there should be no liability unless the defect arose from or had not been discovered or remedied, owing to the negligence of the employer or someone in the service of the employer, and entrusted by him with the duty of seeing that the ways, works, etc., were in proper condition. This exception is eliminated and there appears to be an absolute liability imposed where the injury is caused by any defect, even in the absence of negligence.

"The case of *Walsh v. Whiteley* (1888) (21 Q.B.D. 371), which establishes that the English statute only imposes liability where the defect implies negligence, has no longer application here. It is not necessary as in cases under Part I that the occurrence should be accidental. This, however, is not enough to entitle the plaintiff to succeed because it must be established that the injury was truly caused by the defect. Upon the uncontradicted evidence here, the injury was caused by the reckless conduct of the deceased himself. He was the author of his own injury, and the case is not brought within the statute. The deceased exposed himself to an unneces-

sary risk—*Lancashire and Yorkshire Rly. Co. v. Highley*, (1917), A.C. 352. The appeal should be allowed and the action dismissed. *Lewis versus Nesbit and Auld, Limited*, (Ontario), 1933, *Ontario Weekly Notes*, page 434.

### Privy Council (Canada)

Certain employees of the Michigan Central Railway Company applied to the Board of Railway Commissioners of Canada for an order restraining the company from closing or abandoning the Montrose yards and thereby throwing out of employment the men there engaged. The Board having dismissed the application on July 20, 1932, the employees petitioned the Privy Council (Canada) by way of appeal. The Committee of the Privy Council affirmed the decision of the Board in P.C. 635, dated April 4, 1933, which is in part as follows:—

"The Committee advise—

"That if and in so far as the petition involves any question of law or jurisdiction the Committee do not favour any departure from the established practice, whereby the determination of such questions is left to the Supreme Court of Canada, but, subject to the foregoing, the Committee are of opinion that the finding of the said Board under the said judgment, to the effect that the Railway Company had not removed, closed or abandoned the Montrose Yards of its railway within the meaning of section 179 of the Railway Act, is supported by the evidence in the case, and is in harmony with the previous judgment of the said Board dated November 27, 1931—Order No. 47760 of November 28, 1931—in the *Big Valley Case*, so-called (*Brotherhood of Railroad Trainmen v. C.N.R.*, 38 C.R.C. 313).

"The Committee are further of opinion, subject as aforesaid, that there is no ground for holding that the said Board erred in its finding that section 5 of the Canada Southern Arrangement Act, 1878 (Can.) chapter 27, has no control or modifying effect in respect of the powers and provisions of section 179 of the Railway Act, and that the application failed.

"The Committee therefore advise that the said appeal be dismissed.

"It appears from the reasons for the said judgment of the said Board that the railway company made certain representations at the hearing before the said Board as to the number of employees of the railway company then in its service at Montrose, Ontario, and filed an exhibit with the said Board relative thereto, and the Committee observe that the dismissal of the said appeal shall not prejudicially affect any right which any of the parties thereto has or might have under the provisions of the Railway Act regarding applications or complaints relative to the matter of any reduction by the railway company of the number of its employees in its service at Montrose at the date of the hearing before the said Board."

*Employees of Michigan Central Railway Co. et al. versus Michigan Central Railway Co. (New York Central Railroad Co. Lessee)*, 1933, *Dominion Law Reports*, vol. 3, page 71.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

INDUSTRIAL employment in Canada at the beginning of July showed further marked improvement according to the Dominion Bureau of Statistics, which tabulated returns from 8,125 firms (each employing a minimum of 15 persons) in all industries except agriculture, fishing, hunting and highly specialized business. The staffs of these firms aggregated 778,148 workers, or 35,398 more than they employed on June 1. The index (based upon the average for the calendar year 1926 as 100), stood at 84.5, compared with 80.7 in the preceding month and 88.7 on July 1 of last year. On the same date in the eleven preceding years, the index was as follows:—1931, 103.8; 1930, 118.9; 1929, 124.7; 1928, 117.7; 1927, 109.7; 1926, 105.0; 1925, 98.0; 1924, 97.1; 1923, 100.7; 1922, 92.2 and 1921, 88.6. The increase on July 1, 1933, was decidedly greater than the advance usually indicated between June and July in the experience of the last twelve years. The favourable movement noted since April, gathering momentum in its progress, has provided work for over 79,000 persons, besides increasing the working hours of others previously employed. During the period April to July in 1931, the co-operating firms added some 38,000 persons to their staffs, while last year the gains reported during the same quarter of the year resulted in employment for only slightly over 11,000 workers.

At the beginning of July, 1933, the percentage of idleness reported to the Department of Labour by the local trade unions stood at 21.8, contrasted with percentages of 23.8 at the beginning of June and 21.9 at the beginning of July, 1932. The percentage for July was based on the returns received by the Department of Labour from 1,692 labour organizations, including a membership of 150,040 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada during June, 1933, showed a decline in the total placements effected when compared with the previous month, but recorded a gain over June, 1932, the services group being mainly responsible for the loss un-

der the former comparison and logging, farming and manufacturing for the gain under the latter. Vacancies in June, 1933, numbered 31,706, applications 52,896 and placements in regular and casual employment 30,091.

Statistical information as to the employment situation at the beginning of July will be found on another page, being based on reports received from employers and trade unions throughout Canada, and from the offices of the Employment Service of Canada. The reports of the superintendents of the Employment Service for July are outlined in another article describing the industrial situation at the end of that month.

The most recent statistics available reflecting industrial conditions in Canada are given in a table on page 755. Wholesale prices in July continued the upward movement which commenced in March, the advance in the past five months being 11 per cent. Further improvement also is indicated by the increase in employment, which was more than seasonal particularly in the manufacturing industry practically all branches of which shared in the recovery. Car loadings for the four weeks ending July 29 were higher than for the corresponding period last year and gross earnings of the Canadian National Railways for July were also higher than a year ago. The figures for flour and newsprint production, as well as those showing the output of central electric stations were higher than for the same periods last year. Passenger automobile production was slightly lower than last year. Industrial activity as indicated by the index of the physical volume of business was  $7\frac{1}{2}$  per cent higher in June than in May and also slightly higher than in June a year ago. Production of pig iron and steel showed a notable increase.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent was slightly higher at \$15.48 for July as compared with \$15.41 for June. The increase was due to higher prices for certain foods, chiefly eggs, bread, flour and potatoes which more than offset slight declines in prices of coal. The cost of this budget in July 1930 was \$21.26 as compared with \$21.30 in July, 1926; \$26.92 in July, 1920 (the post-war peak); and

\$14.17 in July 1914. The index number of wholesale prices calculated by the Dominion Bureau of Statistics based on prices in 1926 as 100 continued to advance, being 70.5 for July as compared with 67.6 for June and 63.6 for February. Comparative figures for earlier dates are 97.2 for July, 1929; 100.1 for July, 1926; 164.3 for May, 1920 (the post-war peak); and 64.4 for July, 1914. The advance was due mainly to higher prices for grains and other primary products.

The time loss due to industrial disputes during July was substantially less than that recorded for the previous month, the number of workers involved also showing a steep decline from the previous month when a strike of some 1,300 pulpwood cutters in northern Ontario caused a time loss of 18,000 working days and a dispute involving 600 knitting factory workers in Hamilton, Ont., resulted in a time loss of 6,500 working days. As compared with July, 1932, less than one-third the number of strikes were recorded, with a corresponding decrease in the number of workers involved and the time loss incurred, due chiefly to the occurrence in July last year of strikes in Nova Scotia and Alberta involving 1,000 coal miners in a time loss of 20,000 working days in addition to disputes of salmon fishermen in British Columbia in which upwards of 3,000 workers were involved for a time loss of 18,000 working days. There were in existence during the month eight disputes, involving 1,556 workers and resulting in a time loss of 13,755 working days, as compared with fourteen disputes, involving 3,249 workers and resulting in a time loss of 34,834 working days in June. In July, 1933, there were on record twenty-nine disputes, involving 6,291 workers and resulting in a time loss of 40,186 working days. At the end of the month there were three disputes in progress recorded as strikes and lockouts, involving approximately 465 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been called off by the union.

#### **Industrial Disputes Investigation Act**

During the past month the Department received a report from the Board of Conciliation and Investigation established in connection with the dispute between the Hamilton Hydro-Electric Commission and certain of its employees. Four new applications for the establishment of Boards were also received. An account of the proceedings under the Act during the month, with the text of the report mentioned above appears on page 759.

A report has been received, too late for insertion in this issue, from the Board appointed in connection with the dispute between the Winnipeg Electric Company and certain of its employees. This report will appear in the next issue.

#### **Old age pensions in Prince Edward Island**

Arrangements were completed in July for the payment of old age pensions in the Province of Prince Edward Island as from July 1, 1933, an agreement to this effect being signed on July 24 by the Hon. W. A. Gordon, Minister of Labour, on behalf of the Dominion Government, and the Hon. W. J. P. MacMillan, Minister of Public Health and acting Premier, on behalf of the government of the Province. Six provinces now participate in the benefits provided by the Old Age Pensions Act (Revised Statutes of Canada, 1927, as amended by the Statutes of 1931, chapter 42), these provinces, with the date of the taking effect of the respective concurrent Acts, being as follows: British Columbia, September 1, 1927; Saskatchewan, May 1, 1928; Manitoba, September 1, 1928; Alberta, August 1, 1929; Ontario, November 1, 1929; Prince Edward Island, July 1, 1933. The Northwest Territories also were brought under the scheme by Order in Council, on January 25, 1929. A statistical summary of the administration of the Old Age Pensions Act to the end of the first quarter of 1933 appeared in the last issue of the LABOUR GAZETTE, page 687.

#### **8-hour day to be enforced in British Columbia**

The Hon. W. M. Dennes, Minister of Labour of British Columbia, issued the following statement on July 29, intimating that the Hours of Work Act would be strictly enforced and that further remedial measures would be taken if employers in the Province failed to provide fair conditions. "Authentic reports," he said, "continue to indicate an increase in many lines of business and information from many sources would seem to point to a general upward trend. This is true in several of the basic industries of the province, the increase in volume of the export lumber trade, as well as the renewed activity in metal mining, being particularly noteworthy. The low rates of pay obtaining in some industrial plants is to be greatly deplored, especially where a considerable disparity exists in wage rates paid by firms competing in the same line of business, making it extremely difficult for the employer who is trying to pay decent wages, when others are using cut-wages for their employees and creating unhealthy conditions. The situation

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

|   | 1933       |               |               | 1932          |               |               |
|---|------------|---------------|---------------|---------------|---------------|---------------|
|   | July       | June          | May           | July          | June          | May           |

with regard to wages and hours of work is far from satisfactory. In some cases the wages paid in industry are not on what may be termed a subsistence level, apart entirely from a fair wage scale, and unless this condition is speedily corrected, remedial measures cannot long be withheld. Many complaints are coming into the Department of Labour regarding a number of firms in the lumber industry and the conditions prevailing in their plants. If, after investigating, it is found that these complaints are warranted, then efforts must be made to rectify these conditions.

"The National Industrial Recovery Act in the United States marked a radical departure from ideas hitherto held in that country, and in my opinion voluntary effort and co-operation on the part of all concerned can alone forestall similar drastic measures of control on this side of the line. These measures can be avoided if industrial employers will look at the situation through rational spectacles, bearing in mind that the success and continuity of business depend on the employer retaining the interest and good will of the employee. It is felt that in many instances the employers could adjust their operations in order to absorb large numbers of unemployed, and it is regrettable that some firms are attempting to meet increased business by working overtime rather than by putting additional numbers to work.

"The policy of the Department of Labour will be to insist upon a strict observance of the Hours of Work Act, which provides for an eight-hour day and a forty-eight-hour week, and which, designed in normal times, must be considered more than ample under present conditions. We cannot go on as we are to-day. The Hours of Work Act provides for an eight-hour day and a forty-eight-hour week. We have many complaints that it is not being obeyed, and our inspectors are out all the time tracing down these complaints. If the province cannot get a reasonable response by appeal to voluntary action to remedy the situation, it will have to resort to other means, either by way of provincial regulations, or legislation, where necessary."

**Minimum wage desired by lumber workers in northern Quebec**

workers in the lumber camps in northern Quebec, asking for the enactment of a law providing that a minimum wage shall be paid

The Hon. C. J. Arcand, Minister of Labour of the Province of Quebec, recently undertook to bring to the attention of the provincial government a petition he had received from

by contractors and sub-contractors to lumber workers in the province. The petitioners suggested a minimum wage of \$30-\$40 a month, plus board, for able lumberjacks, on the ground that wages below that amount are not enough to provide support for themselves or their families during the period of seasonal unemployment. Further, they objected to the practice in some camps of paying the men on the basis of 100 logs cut, instead of a monthly wage and board. The lumber workers claimed that such a law would tend to stabilize the industry, and to reduce the number of industrial disputes.

**49th Convention of Trades and Labour Congress of Canada**

The 49th annual convention of the Trades and Labour Congress of Canada will be held at Windsor, Ontario, commencing on September 18. The "Convention Call" states that "since the foundation of the Congress, forty-nine years ago, its conventions have been held annually without break and have now become established as a part of our national life towards which governments look for the true expression of working-class opinion. Though times are difficult there is a responsibility upon each unit of our organization not only to maintain this unbroken record, but to exert every means at their command to be represented at the forthcoming convention by their ablest delegates."

The attention of the members is directed to the urgent problems awaiting discussion at the convention: "The past year has shown no appreciable improvement in employment conditions. Both public authorities and private employers have continued their policy of deflation, wage and salary reductions, etc., which has, in many instances, seriously undermined established standards of living. This has inevitably led to reduced buying power and accentuated the unemployment situation. . . . Conditions are to-day forcing governments more and more towards the policy of exercising regulation and control over economic life and this uncertainty of the future demands that the trade union movement must be prepared at all times to fulfill its purpose of defending the interests of those who toil."

**Decrease of unemployment noted in various countries**

A decrease in unemployment as compared with a year ago in a considerable number of countries is shown in the table of unemployment statistics published each quarter in

*Industrial and Labour Information*, the weekly publication of the International Labour Or-

ganization at Geneva. "It would be premature to conclude on the basis of these figures that we have passed the worst of the depression and that the economic cycle is on the upgrade, but undoubtedly the figures published in this issue are consistent with that view, and as other economic indices also show an improvement, there is reason to hope that the long-expected recovery may at last have commenced. The figures must, of course, be read with the same reservations as to their meaning and comparability as those which have been indicated in the previous issues. It is satisfactory nevertheless to note that unemployment has diminished as compared with a year ago in such important industrial countries as Germany and Great Britain, and also in a large number of other European countries. It is also of importance to note that a similar diminution has taken place in other continents, in countries such as Australia, Chile, Japan and Palestine. Such a widespread movement is a comforting sign. On the other hand, it must not be forgotten that in many other countries unemployment has increased during the past twelve months, and these countries also include important industrial States such as Czechoslovakia and Italy in Europe, and Canada and the United States in North America. A group of Northern European countries (Denmark, Norway, Sweden, and the Netherlands) is also to be found in this list."

Figures published elsewhere in this issue, showing the numbers employed in the manufacturing industries in the United States, indicate a marked improvement in the employment situation in that country during the past two months.

#### German

#### Act to

#### reduce

#### unemployment

The German Federal Government initiated its general program for the revival of trade and industry by the "Act to Reduce

Unemployment," dated June

1, 1933. The Act comprises various measures for relief to be financed through the issue, by the Minister of Finance, of "labour treasury bills" to the amount of a thousand million Reichsmarks, and also through the proceeds of a public fund made up of voluntary donations, in consideration of which certain taxation privileges are to be granted. The Federal Minister of Labour recently intimated that the Act would result within twelve months in absorbing into employment one and a quarter million unemployed persons, independently of any general improvement in the economic situation.

For the assistance of public works either loans or grants may be made. Loans are to be granted in the case of the following classes of works: (1) the reconditioning and extension of buildings, bridges and other constructions under the control of the States, local authorities and other public bodies; (2) suburban small holdings; (3) agricultural settlement; (4) the regulation of water-ways; (5) the supply of gas, water and electricity. It is a condition for the grant of loans in these cases that the works must be publicly useful and that their execution in the near future would not have been possible without such assistance.

Assistance in the form of grants is to be given to (1) works in connection with the reconditioning of dwelling-houses and farm buildings and the conversion of house and other property into smaller dwellings; (2) excavating works instituted by the local authorities. Special regulations govern the latter class of works; they must be set in hand before August 1, 1933, and must also satisfy the above-mentioned conditions applicable to measures financed by loans. Furthermore, mechanical labour is to be eliminated, as far as is economically justifiable, in favour of human labour; and, except in so far as the necessary skilled labour is not available among the unemployed, the work is to be performed by unemployed persons. The latter are to continue to receive whatever benefit or relief they would have received if unemployment had continued, and, in addition, are to be granted a bonus out of the general funds provided under the Act of 25 R.M. for every full four weeks' employment, together with a hot meal at midday provided by the authority responsible for the work, or a suitable allowance in lieu of it. The bonus is to be paid in the form of "commodity vouchers" available for the purchase of clothing, household utensils, etc. Such vouchers are also to be issued under the general provisions of the Act to the district public relief associations for the purchase of clothing, etc., for distribution to necessitous persons.

The Act provides further that employers who incur expenditure in the replacement of industrial or agricultural plant and equipment by other similar equipment of home manufacture may deduct the cost thereof from their profits as normally assessed for taxation under the income, corporation or industrial tax legislation.

A fund for the encouragement of national labour is to be established by means of voluntary donations, in return for which certain taxation privileges are to be granted.

Provision is made also for the absorption of female workers in domestic service, and for the granting of loans to assist marriage.

### Unemployment reserve fund recommended for South Africa

A committee was recently appointed by the government of the Union of South Africa to investigate the advisability of creating a special permanent fund for preventing and relieving acute and prolonged unemployment. In their report the committee made the following recommendations:—

A special permanent fund should be created for preventing and relieving acute and prolonged unemployment created by any cause which would bring about such a depression that a considerable proportion of the workers would be thrown out of employment. The administration of the fund should be entrusted to a Central Board of five members consisting of representatives of (i) the Union Government; (ii) the rural community; (iii) employees; (iv) employers; (v) local authorities. The representative of the Government should be chairman of the Board. The appointment of the members should be vested in the Governor-General-in-Council. The members of the Board should be appointed for a period of not less than four years, and should be eligible for reappointment.

The amount of the fund should be not less than £5,000,000 and should be raised by contributions from Consolidated Revenue and Loan Funds.

In respect of expenditure on the prevention and relief of unemployment, the fund should, subject to such conditions as may be laid down by the Central Board, be used for the purpose of granting subsidies or loans, or both, to Government Departments, Provincial Administrations, Local Authorities, and Public Bodies.

The Board shall hand over to the Public Debt Commissioners all or such portion of the fund as is not needed to meet current payments to be invested by them in the securities specified in paragraph 243 of this report.

As regards works of a capital nature, the assistance to be given to local authorities should be confined to loans for a period of, say, five years, or to a contribution of a portion of the interest, for, say, two or three years. In respect of reserve works the schemes undertaken specially by local governing authorities for the prevention and relief of unemployment during a severe depression other than works of a capital nature, contributions in aid of any such expenditure by local authorities may be made from the fund to such extent, and on

such conditions as the Central Board may deem necessary.

### Extent of hospital accommodation in Canada

A directory of the hospitals of Canada has been published by the Dominion Bureau of Statistics as one of the Seventh Census series of reports. The report shows that in 1931 there were 893 hospitals in Canada with a total bed capacity of 87,465 beds at the rate of one bed to 118 of the general population. General public hospitals had 36,810 beds or 42 per cent of total bed capacity; Mental Hospitals 30,297 or 34.6 per cent; Tuberculosis Hospitals 5,879 or 6.7 per cent; Dominion Hospitals 4,460 or 5.0 per cent; Hospitals for Incurables 4,212 or 4.8 per cent and Isolation Hospitals 1,683 or 2 per cent.

The collective days' stay of all in-patients in hospitals, omitting Mental Hospitals and Hospitals for Incurables, during 1930 was 11,748,029 days. General Public Hospitals showed 8,234,675 or 71 per cent of total collective days' stay; General Private, 232,678 or 2.0 per cent; Tuberculosis Hospitals 1,879,666 or 16 per cent; Paediatric and Orthopaedic 346,761 or 3.0 per cent and Dominion Hospitals 464,103 or 4 per cent.

Of the hospitals enumerated in the Directory 448 maintain their own X-Ray departments, 324 had their own clinical laboratories and 218 physical therapy departments. The returns under training schools for nurses gave 256 as in operation on June 1, 1931, with 9,434 nurses in training.

### I.L.O. report on compulsory pension insurance

The International Labour Office (League of Nations) has just published a report entitled "Compulsory pension insurance—comparative analysis of national laws and statistics." This volume gives the results of a systematic examination, on international lines, of the essential features of compulsory invalidity, old-age and widows' and orphans' insurance. It is in five parts, describing the scope of such insurance; risks covered and cash benefits; benefits in kind; financial resources; and administrative organization (insurance institutions, supervision, settlement of disputes). This study is to be followed by two others, one dealing with the position of foreigners and the maintenance of migrants' pension rights, and the other containing an international study of the statistical and actuarial bases and the financial management of the various schemes. The International Labour Office has already published a comparative analysis of national non-contributory pension schemes.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

FOUR applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour recently, as follows:

On July 25 an application was received from certain employees at Montreal of the Canadian Pacific Steamships Limited being steamship freight checkers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The dispute arose in connection with the matter of the hourly rate of wages, 50 employees being directly affected. This case is being dealt with by a departmental officer, looking to a settlement through mediation.

An application was received from the Canadian Pacific Railway Company on July 26 in connection with a dispute arising out of a proposed further ten per cent wages deduction, in addition to the present ten per cent deduction, as affecting its employees being clerks, freight handlers and station employees and subsidiary groups throughout Canada, represented by the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The application stated that 3,000 employees were directly concerned in the dispute.

Two applications were received from the Canadian National Railways in connection with a dispute arising out of a proposed further ten per cent deduction in wages as affecting its (1) clerical and other classes of employees, system, and (2) headquarters staffs, represented by the Canadian Brotherhood of Railway Employees. The number of employees stated in the application to be directly affected in the first case was 4,275 and in the second case was 847.

The last three of these applications were before the Department for consideration at the time of going to press.

In connection with the dispute over the 10 per cent further deduction in wages between the principal railways in Canada (the Canadian National Railways and Canadian Pacific Railway and subsidiary railways) and their locomotive engineers, locomotive firemen, conductors, trainmen and telegraphers, upon which a Board reported (LABOUR GAZETTE, May, 1933, page 478; July, 1933, page 676), following the refusal of the employees to accept the findings of the Board and failure to reach a settlement by further negotiations, the officers of the organizations representing the five groups of employees announced that strike ballots had been distributed to the membership returnable on September 15 next.

### Report of Board in Dispute Between Hamilton Hydro-Electric Commission and Certain of Its Employees

A report was received on July 12 from the Board of Conciliation and Investigation which had been established to deal with a dispute between the Hydro-Electric Commission of the City of Hamilton and certain of its employees, being members of Local No. 138 of the International Brotherhood of Electrical Workers, Local No. 7, of the Hamilton Hydro Employees' Association, and the Hamilton Hydro-Electric Meter Men's Association. The personnel of the Board was as follows: His Honour Judge J. H. Denton, Toronto, Chairman, appointed by the Minister of Labour on the joint recommendation of the other Board members, Mr. C. W. Sherman, President of the Dominion Foundries and Steel Limited, Hamilton, and Mr. Fred Bancroft, Oakville, nominees of the Hydro-Electric Commission and the employees respect-

ively. One hundred and fifteen employees were said to be directly affected by the dispute which arose in connection with a general wages reduction proposed by the employer.

The report of the Board, which was signed by the Chairman and Mr. Sherman, recommended a reduction of 10 per cent in the wages of all employees who, on July 1, 1933, were receiving a salary or remuneration at the rate of \$1,100 or more per year, and a reduction of 5 per cent in the wages of those who, on July 1, 1933, were receiving less than \$1,100. Mr. Bancroft did not concur in the Board's findings. At the commencement of the Board's sessions the parties concerned in the dispute agreed to be bound by the recommendations and decisions of the Board.

The full text of the Board report follows:

### Report of Board

IN THE MATTER OF: *The Industrial Disputes Investigation Act, and of a dispute between the Hydro-Electric Commission of the City of Hamilton, Employer, and Certain of its employees being members of Local No. 138 International Brotherhood of Electrical Workers, Local No. 7 Hamilton Hydro-Employees Association, and Hamilton Hydro-Electric Meter Men's Association, Employees.*

To the Honourable, The Minister of Labour,  
Ottawa, Ontario.

The Board, appointed by you on the 29th of May, 1933, to deal with the above dispute, have now the Honour to report thereon as follows:

The Board held its first meeting at Hamilton on June 7, 1933, with all members present, when the oath of office was taken, and a general discussion had as to the matter in dispute, after which an adjournment was taken until June 19. On the latter date, at Hamilton, there appeared as representing the Hydro Commission, T. H. Simpson, Barrister, (with the consent of all parties); W. D. Black, member of the Hydro Commission; E. I. Sifton, Chief Engineer and General Manager of the Commission; and W. H. Childs, Assistant Manager and Secretary of the Commission.

Representing the men there appeared Ernest Inglis, Vice-President of the International Brotherhood of Electrical Workers; Charles Starkey and W. A. S. Pettit, of Local Union No. 138; J. F. McDiarmid, Carl W. Berquest, and Robert Butter, of Local Union No. 7, Hamilton Hydro Employees Association; and George Male and Aldred Smith for the Meter Men's Association. All those who appeared representing different classes of employees were themselves employees of the Hydro Commission with the exception of Mr. Inglis. At this meeting all parties agreed to be bound by the recommendations and decisions of the Board.

Prior to the setting up of the Board the Commission had proposed to the men a reduction in their salaries or wages or earnings. This the employees objected to and also asked for other and better working conditions.

The Board held meetings on the 19th, 20th and 21st of June, at Hamilton, when we heard the case presented by the Commission and that presented by all classes of employees. The Board then adjourned and met in Toronto on the 28th of June, July 6th, and at Hamilton again on the 10th of July when further consideration was given to the cases so presented.

Having given the case presented by the Commission and that presented by the employees of all classes our best consideration we recommend as follows:—

#### I.

(1) That as between the Hamilton Hydro-Electric Commission and such of its employees who are members of Local Union No. 138, International Brotherhood of Electrical Workers, the conditions of labour and rates of pay be as follows and shall take effect from the 1st day of July, 1933, and remain in effect until the 1st day of July, 1934, and yearly thereafter unless thirty days' written notice has been given by either party thereto prior to the expiration of any year.

(2) That the Commission will not discriminate against any of its employees because of their membership in Local Union No. 138, International Brotherhood of Electrical Workers, and on the other hand such union, its officials or members, will not discriminate against or interfere with any of the Commission's employees who do not belong to a union. In the event of a difference arising over the interpretation to be given to these conditions a grievance committee of the union shall meet the Commission officials and adjust the matter. In case of failure to adjust the difference no cessation of labour shall take place until the highest officials of both parties have met in an endeavour to arrive at a settlement, and if no agreement is then reached both parties agree that the matter be settled by arbitration.

#### *Sub-Station Operating Department*

(3) A week's work shall consist of eight hours per day, six days per week. If for any reason an operator should lose his day off in any week he shall be paid for the same at the regular rate or be given another day in the same week.

#### *Sick Leave*

(4) Upon satisfactory proof being submitted to the Commission an employee who is absent from work through sickness will be paid up to two weeks full pay plus two weeks half pay in any one calendar year. In the event an employee is not absent from work through sickness for two weeks in any one year, such time shall accumulate to the employee's credit, and if sick in any subsequent year for a period longer than two weeks, the employee shall be paid for such accumulated time to a maximum of six weeks full pay, plus two weeks half pay.

*Seniority*

(5) Seniority shall in all cases date from the time the operator last entered the employ of the Commission. If, in the opinion of the Commission it becomes necessary to reduce the staff, the latest operator taken on shall be the first laid off, other qualifications being equal.

*Investigations*

(6) Should any cause of complaint arise in connection with the working conditions or wages of any operator he shall have the right, through the grievance committee of the Union, to appeal to the Commission where evidence for both sides may be submitted, such investigation called for must be held within three days, Sundays and holidays not included, and if after such investigation the Commission shall decide that the employee has been unjustly dealt with he shall be reinstated to his former position and shall be paid for any time lost thereby.

*Vacation*

(7) All operators having been in the employ of the Commission for one year shall receive two weeks vacation in each year with full pay.

*Chief Operator*

(8) The Chief Operator shall not be permitted to be a member of the Union.

*Salaries*

(9) All employees who, on the 1st of July, 1933, were receiving a salary or remuneration, whether paid monthly, weekly, or hourly, of \$1,100 or more shall receive thereafter ten per cent less, and all such employees who, on the 1st of July, 1933, were receiving less than \$1,100, shall receive five per cent less.

## II. OVERHEAD LINE DEPT., UNDERGROUND AND MAINTENANCE DEPARTMENT AND TROUBLE DEPARTMENT

*Working Hours*

(1) The hours shall be forty-four hours per week from 8 a.m. to 12 noon, and from 1 p.m. till 5 p.m. for the first five days of the week, and from 8 a.m. till 12 noon on Saturdays.

*Overtime*

(2) From the end of the regular working day, overtime shall be paid for at the rate of time and one-half of the regular rate for the first five hours and double time thereafter until relieved. Double time shall be paid all employees required to work Sundays or statutory holidays.

*Emergency Calls*

(3) All men called out to work outside of the regular working hours shall be paid for three hours as a minimum.

(4) The Foreman shall not be permitted to be an active member of the Union. The Superintendent shall not be permitted to be a member of the Union.

*Rates of Pay*

(5) All employees in the departments who, on the 1st of July, 1933, were receiving, or whose regular earnings at the rate of pay then in force amounted to \$1,100 per annum or more shall receive 10 per cent less; and all such employees who, on the 1st July, 1933, were receiving, or whose regular earnings at the rate of pay then in force amounted to less than \$1,100, shall receive five per cent less.

(6) There shall be not less than two men engaged in the trouble department who shall work six days per week and whose daily hours shall be those which are mutually arranged and consistent with proper service to the public.

*Weather Conditions*

(7) No time shall be lost through adverse weather conditions. The Superintendent shall be the judge of such weather. Men called upon to work out in wet weather on trouble or emergency shall be provided with rubber coats, boots and hats.

*Holidays*

(8) All men in these departments shall be paid for four statutory holidays, namely, Good Friday, Dominion Day, Labour Day and Christmas, and in case of the trouble department present practice as to holidays shall prevail.

*Defective Equipment*

(9) No man is required to use defective equipment but is required to immediately report to the foreman any such defective equipment. Safety first lectures to be arranged at times of adverse weather conditions.

*Seniority*

(10) Seniority shall in all cases date from the time the employee last entered the employ of the Commission. If in the opinion of the Commission it becomes necessary to reduce the staff the latest employee taken on shall be the first laid off, other qualifications being equal.

*Safety*

(11) Voltage over 600 volts shall be classed as high voltage and when men are working

on high voltage work not less than two men shall be assigned to the job, and all linemen shall use rubber gloves on high voltage work, rubber gloves to be tested at least once every month.

(12) It is also agreed that Clause No. 6 relating to investigations shall govern overhead line department, underground department, maintenance and meter department.

### III. METER DEPARTMENT

(1) A week's work shall consist of forty-four hours as follows: eight hours per day from 8 a.m. to 12 noon, and from 1 p.m. to 5 p.m., except Saturdays, which shall be from 8 a.m. to 12 noon. Men on trouble and testing transformers or work other than routine meter department work shall be paid for at the rate of time and one-half for the first five hours after the end of the regular working day, and double time thereafter until relieved.

#### *Seniority*

(2) Seniority in all cases shall date from the time the employee last entered the employ of the Commission. If in the opinion of the Commission it becomes necessary to reduce the staff, the last employee taken on shall be the first laid off, other qualifications being equal.

#### *Vacation*

(3) All meter men, after being in the employ of the Commission for one year prior to the first of May, shall receive two weeks' vacation with full pay. Meter men entering the employ of the Commission prior to the first of March shall receive one week's vacation with full pay that year. All meter men shall receive full pay for all statutory holidays.

#### *Rates of Pay*

(4) All employees coming under the Meter Department whose rate of pay or regular earnings on the 1st of July, 1933, amounted to \$1,100 per annum or more, shall receive 10 per cent less; and all employees whose rate of pay or regular earnings were less than \$1,100 a year, shall receive 5 per cent less.

(5) Clauses No. 4 and No. 6 relating to Sick Leave and Investigations, for the Operating Department, shall apply to meter men.

### IV.

Your Board further recommend:—

(1) That as between the Hydro-Electric Commission and such of its employees who are not members of Local Union No. 138, but are parties to the application for this Board

the following be the conditions of labour and rates of pay from and after the 1st of July, 1933, and shall remain in effect until the 1st of July, 1934, and yearly thereafter unless thirty days' written notice has been given by either of the parties thereto prior to the expiration of any year.

(2) The Hamilton Hydro-Electric Commission will not discriminate against any of its employees because they belong to any association of employees which may now exist or hereafter be formed; provided, however, that the Commission shall have the right to insist that any such employee who, in the opinion of the Commission, holds an executive or confidential position, shall not belong to any such association.

(3) In the event of a difference arising over the interpretation of any of these conditions, a grievance committee of the said Association shall meet the Commission and adjust the matter; in case of failure to adjust the difference, no cessation of labour shall take place until the highest officials of both parties have met in an endeavour to arrive at a settlement, and if no agreement is then reached both parties hereby agree that the matter be settled by arbitration.

(4) A week's work shall consist of thirty-six and one-half hours per week for those employees in the office, and forty-four hours per week for those employed at the substation. For those on the salaried payroll and salaried men on the weekly pay-roll there shall be no pay for overtime, which shall be at the discretion of the head of the department. Employees of the Stores Department on an hourly basis shall be paid for overtime at the rate of time and a half for the first five hours after the end of the regular working day, and double time thereafter until relieved.

(5) Double time shall be paid to all employees at an hourly rate for work in the Stores Department for work on Sundays and Statutory holidays.

(6) Upon satisfactory proof being submitted to the Commission any salaried employee who is absent from work through sickness will be paid up to two weeks full pay plus two weeks half pay in any one calendar year.

(7) In the event of a salaried employee being not absent from work through sickness for two weeks in any one year such time shall accumulate to the employee's credit and if taken sick in any subsequent year for a period longer than two weeks the employee shall be paid for such accumulated time to a maximum of six weeks full pay plus two weeks half pay.

(8) Seniority shall in all cases date from the time the employee last entered the employ of

the Commission. If, in the opinion of the Commission, it becomes necessary to reduce the staff, the latest employee taken on shall be the first laid off, other qualifications being equal.

(9) Should any cause of complaint arise in connection with the wages and working conditions of any member, he shall have the right through the Grievance Committee of the Association, to appeal to the Commission, where evidence for both sides may be submitted; such investigation called for must be held within three days, Sundays and holidays not included, and if after such investigation the Commission shall decide that the employee has been unjustly dealt with they shall reinstate him to his former position and he shall be paid for any time lost thereby.

(10) All salaried employees after having been in the employ of the Commission for one year prior to the first of May, shall receive two weeks' vacation with full pay.

(11) All salaried employees shall receive full pay for all statutory holidays. Employees in the Stores Department, Groundmen and Truck Drivers on an hourly basis, will be paid for four statutory holidays.

(12) The salaries to be paid shall be as follows: All who on the 1st of July, 1933, were being paid or whose rates of pay entitled them to \$1,100 a year or more, shall be paid 10 per cent less; and all those who were being paid or whose rates of pay entitle them to less than \$1,100 per year shall be paid 5 per cent less.

Your Board wish to express their thanks not only to the representatives of the Commission but also to the representatives of the employees for the sincere efforts they made to adjust the matters in dispute and come to an agreement among themselves. Many of the conditions of labour hereinabove stated are agreeable to all parties but some of them are not and they were wide apart in the rates of pay. It will be observed that some of the conditions above stated are in some respects repetitions of other conditions in another class or department, but the members of your Board have thought it better to separate the conditions applicable to each class. To make matters clearer so far as the rates of pay are concerned we may state that the intention of the Board is that all classes of employees whether paid by the month or the week or the hour, whose rates of pay on the 1st of July, 1933, would entitle them to \$1,100 a year or more shall suffer a reduction of 10 per cent in their pay, and that those who receive less than \$1,100 shall receive a reduction of 5 per cent.

We regret to say that Mr. Bancroft, one of the members of the Board, does not join us in this report.

Respectfully submitted.

(Sgd.) J. H. DENTON,  
*Chairman.*

(Sgd.) C. W. SHERMAN.

Dated at Hamilton, Ontario, 10th July, 1933.

## CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

### Summary of Recent Decisions

REPORTS have been received of seven cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the LABOUR GAZETTE, April, 1933, page 379 and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from September 1, 1925, the date of the inception of the Board, to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the agreement made between the railways and the employees concerned for the establishment of the Board was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was estab-

lished for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application or interpretation of the schedule of working conditions for "Clerks and Other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year subject to reappointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provisions was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award. Up to the present time

in only one case has it been found necessary to appoint an arbitrator.

**Case No. 102.—Sleeping, Dining and Parlour Car Department—Western Region**

A change was made in the running schedule of trains between Winnipeg and Edmonton in October, 1930, resulting in the employment of three dining car crews instead of four, as formerly. The company contended that the continuance of four crews would probably react unfavourably to the employees themselves, as it would be necessary to reduce service and in the long run cause more unemployment than would the proposed reduction in the number of crews. The employees pointed out that under Rules governing Dining Car Employees (Article 4, Rules *a* and *b*) changes of crews should be made only by mutual agreement, while Article 18 provided for a 30-day notice for revision of the schedule, which had not been given.

When the case came before the Board it was referred back to the parties concerned with a view to their reaching an amicable settlement on the question whether three crews were sufficient to cover the changed service.

Subsequently the claim of the employees was denied by the Board.

**Case No. 104.—Operating Department (Central Region)**

The question of the seniority status of certain employees was involved in this case, and also in cases No. 110, 111, 114, and 115. The Board of Adjustment submitted the complaints of the employees to arbitration by Mr. J. K. Smith. For the past twelve years Mr. Smith has occupied the position of manager of the Transportation Bureau of the Montreal Board of Trade.

In the present case a distribution clerk and an assistant distribution clerk were displaced in October, 1932, on account of a reduction of staff at Montreal. They endeavoured to exercise their seniority rights to other positions, but were refused the privilege of doing so.

From the evidence it appeared that about a year ago the railway executives considered it necessary to reorganize and make certain changes in their accounting system, and they decided, as from August, 1932, to set up a district accounting staff, and to consolidate with the staff of the General Superintendent all operating accounts for the District of Montreal. The Arbitrator stated his opinion that the real issue was "whether or not the railway management had the right, under the agreement, to consolidate their accounting, and

transfer employees and their work from locations and from the jurisdiction of officials whose entire staff is covered by the schedule, to the office and jurisdiction of the general superintendent. There is nothing in the record," he continued, "to indicate that the employees transferred to the office of the general superintendent are dissatisfied. If the employees objected to this procedure they should have registered a complaint at the time and have had it handled through the constituted channels."

The evidence was held to show that each of the employees was permitted to exercise his seniority in his own group, and actually obtained a position with higher pay than he formerly enjoyed. The arbitrator decided that the management had acted within its rights, and that the complaints of the employees should be dismissed.

**Case No. 110.—Operating Department (Central Region)**

A dispute arose as to the status allowed to an employee in the Belleville Division in the clerical seniority group. The circumstances in this case were stated by the arbitrator to be as follows. The employee entered the service of the former Grand Trunk Railway on September 3, 1912, and in 1918 resigned to take a position with the former Canadian Northern Railway at Belleville, Ontario. The former Canadian Northern and Grand Trunk lines were amalgamated by the Federal Government in 1920. As a result of this the local freight work at Belleville was co-ordinated and merged under the former Grand Trunk staff at that point. The employee in question was transferred with the work of the Canadian Northern freight office and he was accorded seniority dating from September 3, 1912, which included former service on the Grand Trunk as well as the Canadian Northern Lines. His name appeared on the 1924 list with seniority dating from September 3, 1912, and from the record it appears that this was not protested until after the 1925 list was posted.

"The manner in which this case, as well as that of Mr. — at Cobourg, Ontario, was handled by the management and the employees" the arbitrator said, "is open to criticism and has rendered a settlement very difficult. However, in my opinion, Mr. — (the complainant) is not entitled to credit for the time he served on the former Grand Trunk from 1912 to 1918 when he resigned to take a position with the former Canadian Northern Railway. The wage agreement and schedule of rules contains no provisions covering maintenance of seniority in the case of voluntary or

enforced merging of railways. Therefore, in such cases, the management is quite within its rights in giving the employees of the merged railway the seniority accumulated in the service of the merged line. Article 3, Rule (b), on which the employees base their contention does not apply to employees transferred under the circumstances governing in this case.

"Taking into consideration all the evidence submitted in this case," the arbitrator concluded, "I find that the management is within its rights in allowing Mr. — (the complainant) credit for the time served with the former Canadian Northern Railway and that his seniority should date from June 1, 1918, the time he entered the service of that line. My conclusion is that the management is not justified in according Mr. — seniority based on his services in the Grand Trunk from which he resigned in 1918."

#### **Case No. 111.—Operating Department (Central Region)**

As the result of the amalgamation of the Canadian Northern and Grand Trunk Lines the local freight work at Cobourg, Ontario, was co-ordinated and merged under the former Grand Trunk staff at that point. A certain clerk was transferred from the Canadian Northern freight office, and was accorded seniority as from March 24, 1912. The employees contended that Article 3, Rule B of the schedule for "Clerks and other classes of Employees" provided that an employee's seniority shall count from the date he entered the service in a position covered by that schedule, and that in this case the clerk in question was only entitled to seniority as from July 1, 1920.

The arbitrator held that the wage agreement and schedule of rules contained no provisions covering maintenance of seniority in the case of voluntary or enforced merging of railways, and that the management was quite within its rights in giving the employees of the merged railways the seniority they held in their former positions.

The article cited by the employees did not, in his opinion, apply to employees transferred under the circumstances in the case, the clerk in question having served continuously in one branch of the merged railways. The arbitrator found, therefore, that the clerks seniority should stand as from March 24, 1912.

#### **Case No. 114.—Operating Department (Central Region)**

This case concerned the standing of a locomotive foremen's clerk in regard to seniority following the purchase in 1929, by the Canadian National Railways, of the Quebec, Mont-

real, and Southern Railway, his seniority being allowed to stand as from August 6, 1914, the date on which he had entered the service of the latter railway. The employees again cited Article 3, Rule B of the schedule, as against such procedure. The arbitrator, however, found that this date of seniority has been agreed to by the general chairman, and further, that the rules did not provide for employees of railways that have been amalgamated with the National system. The seniority of the employee was therefore allowed to stand as from August 6, 1914.

#### **Case No. 115.—Operating Department (Central Region)**

A question arose regarding the seniority allowed to a road master's Clerk formerly employed by the Quebec, Montreal and Southern Railway, who continued in service after the amalgamation of that company in 1929 by the Canadian National Railways, his seniority being held to include the period of his service with the latter railway, that is from December 16, 1915. The employees again objected to the procedure followed by the management, alleging that it conflicted with Article 3, Rule B, but the arbitrator held that the date had been agreed to by the general chairman, and that the seniority of this clerk should stand as from the date named.

#### **Case No. 120.—Accounting Department (Atlantic Region)**

The complainant in this case was formerly employed as a messenger, being given the usual opportunity to qualify himself as a typist. Subsequently he was engaged at cheque writing, or writing out cheques on a typewriter. On May 1, 1932, he was laid off owing to reduction in staff. A female typist, junior to him in service, who had been absent on sick leave at the date when he was let out, was allowed to resume her duties in January 1933. The employees contended that as the male typist was senior in point of service he should have been assigned to the position, citing Article 3, Rule K (dealing with reductions in staff), and Article 3 Rule L (dealing with increases in staff). The management on the other hand, contended that the complainant was not denied his schedule rights under Article 3 Rule K, because he neither claimed nor was qualified to fill the position held by the lady in question, who was a competent general typist; and that he had not been denied his rights under Rule L because there was not increase of force.

The Board denied the employees' claim.

## STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1933

THE following table shows the number of disputes, workers involved and time loss for July, 1933, as compared with the previous month and the same month a year ago.

| Date           | Number of disputes | Number of employees involved | Time loss in working days |
|----------------|--------------------|------------------------------|---------------------------|
| *July, 1933 .. | 8                  | 1,556                        | 13,775                    |
| *June, 1933 .. | 14                 | 3,249                        | 34,834                    |
| July, 1932 ..  | 29                 | 6,291                        | 40,186                    |

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded for July was substantially smaller than that shown for June, 1933, the number of workers involved and the time loss incurred showing a similar decline from the previous month when a strike of some 1,300 pulpwood cutters in northern Ontario caused a time loss of 18,000 working days and a dispute involving 600 knitting factory workers in Hamilton, Ont., resulted in a time loss of 6,500 working days. As compared with July, 1932, less than one-third the number of strikes were recorded, with a corresponding decrease in the number of workers involved and the time loss incurred, due chiefly to the occurrence in July last year of strikes in Nova Scotia and Alberta involving 1,000 coal miners in a time loss of 20,000 working days, in addition to disputes of salmon fishermen in British Columbia in which upwards of 3,000 workers were involved for a time loss of 18,000 working days.

Two disputes, involving 612 workers, were carried over from June, and six disputes commenced during July. Of these eight disputes, five were terminated during the month, three being in favour of the employer involved, one in favour of the workers concerned and a com-

promise settlement was reached in one case. At the end of July, therefore, there were three disputes in progress recorded as strikes or lockouts, namely: coal miners, Canmore, Alta., women's clothing factory workers, Toronto, Ont., and plumbers, Hamilton, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to seven such disputes, namely: photo engravers, Toronto, Ont., commencing March 23, 1931, one employer; photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Winnipeg, Man., February 28, 1932, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; lithographers, Toronto, Ont., April 15, 1932, one employer; motion picture projectionists, Saint John, N.B., March 6, 1933, one employer; and compositors, Winnipeg, Man., March 13, 1933, one employer.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which some work is performed or may be required, are not included in the record, as no relation of employer and employee is involved.

A minor dispute has been reported which resulted in a cessation of work on July 31, 1933, in the establishment of a produce company at Winnipeg, Man., by eight employees for four hours. A change from piece rates to hourly rates of pay for women killing and plucking chickens was demanded, 32½ cents per hour being agreed upon.

A strike of ornamental iron and bronze workers on July 26, 1933, was reported to the Department too late for inclusion in the table and statistical compilation. Between 100 and 180 workers in from 15 to 20 establishments ceased work demanding a minimum wage of 65 cents per hour for mechanics. Negotiations failing to result in a settlement, the dispute was unterminated at the end of the month.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**KNITTING FACTORY WORKERS, HAMILTON, ONT.**—This strike, beginning on June 19, 1933, terminated on July 12, when the strikers resumed work on the employer's terms. As stated in the July issue of the LABOUR GAZETTE,

a cessation of work by employees in one department against the introduction of a new system of work and wage payment by results had spread to other departments where the system had already been in force for some months. No settlement being reached, operations had been resumed in some departments early in July, some of the strikers returning and others being replaced, while the work of

certain departments was carried on in another plant of the employer at Woodstock, Ontario. Negotiations between the management and the strike committee on July 11 resulted in an arrangement for the return of the remaining strikers on the following day. It is reported that a slight improvement in the piece rates had been made and there was to be no discrimination against the strikers.

#### STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1933\*

| Industry,<br>occupation and locality | Number<br>of<br>workers<br>involved | Time<br>loss in<br>working<br>days | Remarks |
|--------------------------------------|-------------------------------------|------------------------------------|---------|
|--------------------------------------|-------------------------------------|------------------------------------|---------|

##### (a) Strikes and Lockouts in Progress prior to July, 1933

|   |     |       |  |
|---|-----|-------|--|
| MANUFACTURING—<br><i>Textiles, Clothing, &amp;c.</i> —<br>Knitting factory workers,<br>Hamilton, Ont.....         | 600 | 1,500 | Commenced June 19, 1933; against installation of efficiency system; terminated July 11, 1933; in favour of employer. |
| CONSTRUCTION—<br><i>Buildings &amp; Structures</i> —<br>Electrical workers (inside<br>wiremen), Hamilton, Ont.... | 12  | 60    | Commenced May 15, 1933; against reduction in wages; lapsed by July 15, 1933; in favour of employer.                  |

##### (b) Strikes and Lockouts Commencing during July, 1933

|  |     |       |   |
|--|-----|-------|---|
| MINING, NON-FERROUS SMELTING<br>AND QUARRYING—<br>Coal miners, Canmore, Alta...  | 240 | 5,500 | Commenced July 5, 1933; to secure change in working conditions for one miner; un-terminated.                              |
| MANUFACTURING—<br><i>Fur, Leather and other Animal<br/>Products</i> —<br>Fur factory workers (collars<br>and cuffs), Toronto, Ont..... | 375 | 2,500 | Commenced July 7, 1933; for increase in wages and unemployment insurance; terminated July 14, 1933; in favour of workers. |
| <i>Textiles, Clothing, &amp;c.</i> —<br>Women's clothing factory<br>workers (cloakmakers),<br>Toronto, Ont.....                        | 200 | 4,000 | Commenced July 7, 1933; for increase in wages; un-terminated.   |
| <i>Miscellaneous</i> —<br>Bedding and furniture factory<br>workers, Winnipeg, Man.....   | 100 | 50    | Commenced July 24, 1933; for increase in wages; terminated July 24, 1933; in favour of employer.                          |
| CONSTRUCTION—<br><i>Buildings and Structures</i> —<br>Sheet metal workers (tin-<br>smiths), Toronto, Ont.....                          | 4   | 20    | Commenced July 14, 1933; for discharge of one worker <i>re</i> union question; terminated July 19, 1933, compromise.      |
| Plumbers, Hamilton, Ont.....   | 25  | 125   | Commenced July 26, 1933; alleged violation of agreement <i>re</i> wage rates; un-terminated.                              |

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

**ELECTRICAL WORKERS (INSIDE WIREMEN), HAMILTON, ONT.**—This dispute, the result of a reduction in wages from 95 cents per hour to 75 cents, is reported to have lapsed early in July, the strikers resuming work at the lower rate. The union had previously offered to accept a rate of 85 cents per hour, which two employers accepted and paid for the time being.

**COAL MINERS, CANMORE, ALTA.**—Employees in one colliery ceased work on July 5, 1933, when the management refused to comply with their demand that one miner should be given another place pending negotiations as to improvements demanded for his working place. The management refused to negotiate further until the strikers had resumed work, such a cessation being contrary to the agreement. The western representative of the Department of Labour interviewed both parties to the dispute on July 29, but no settlement was reached, the dispute being, therefore, unterminated at the end of the month. In August it was arranged that the strikers would resume work on the 14th.

**FUR FACTORY WORKERS, TORONTO, ONT.**—This dispute commenced on July 7, 1933, when 375 factory workers, employed by some thirty-five firms in Toronto, ceased work demanding a ten per cent increase in wage rates and, in addition, the payment of a two per cent unemployment insurance rate by the employers. The International Union of Fur Workers claimed that the employers had violated the agreements and reduced wages. The establishments affected were picketed by the union and several arrests were made on charges of assault. On July 15 work was resumed, the demands of the strikers being conceded, and new agreements signed.

**CLOTHING FACTORY WORKERS (CLOAKMAKERS), TORONTO, ONT.**—On July 7, 1933, some 175 cloakmakers employed by several firms ceased work demanding a thirty per cent increase in wage rates, a minimum wage for women workers, certain changes in regard to the discharge of workers, and no excessive overtime while unemployment existed in the trade. From time to time other firms became involved in the dispute, it being reported that upward of two hundred were on strike. Negotiations between the employers and the union, the International Ladies' Garment Workers' Union, were carried on resulting in the workers in some of the shops resuming work about July 14 at increased rates, but at the end of the month the dispute was reported to be unterminated in other shops.

**BEDDING AND FURNITURE FACTORY WORKERS, WINNIPEG, MAN.**—Upholsterers, mattress makers, etc., members of the Furniture and Bedding Workers' Union, affiliated with the Workers' Unity League, ceased work on July 24, 1933, in one establishment, demanding a ten per cent increase in wages which had been decreased by this amount in March; also, recognition of a shop committee and no discrimination against union members. Pickets were placed about the factory and a disturbance occurred which resulted in the arrest of one picket, not an employee of the firm, on a charge of rioting. The employer met the representatives of the workers and agreed to recognize a shop committee and to exercise no discrimination against the strikers, but refused to grant the requested increase in wages. The strikers, however, agreed to return on these conditions and work was resumed the same afternoon.

**SHEET METAL WORKERS (TINSMITHS), TORONTO, ONT.**—On July 14, 1933, four members of the International Association of Sheet Metal Workers ceased work, their demand for the discharge of one tinsmith who had failed to pay his union dues being refused. On July 19 the union declared the strike terminated on the understanding that when new work was available only union members in good standing would be employed.

**PLUMBERS, HAMILTON, ONT.**—Employees in two establishments ceased work on July 26, 1933, demanding the payment of the rate of 90 cents per hour as provided for in the union agreement with the master plumbers' association, effective from May 1, 1933. At the end of the month no settlement had been reported.

The University of London has taken over the London Day Training College for teachers, and is proceeding to build up in connection with it an Imperial Institute of Education, or graduate school of education especially equipped to encourage the attendance of educationists from all parts of the Empire. In the words of the University's statement of policy its object is "the creation in London of a strongly equipped centre for the continuous discussion and investigation of educational problems that are important to the constituents of the British Commonwealth, and for the training of men and women who are to play parts of more than ordinary importance in the educational systems of the Commonwealth." Canadians interested in the work of the Institute will be able to obtain fuller data concerning it by addressing the Institute of Education, University of London.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1933, in the review of Strikes and Lockouts in Canada and Other Countries, 1932. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the Government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in June was 42, and 9 were still in progress from the previous month, making a total of 51 disputes in progress during the month, involving 18,600 workers with a time loss of 98,000 working days for the month. Of the 42 disputes beginning in June, 4 were over proposed reductions in wages, 20 over other wage questions, 11 on questions respecting the employment of particular classes or persons and 7 over other questions. Settlements were reached in 34 disputes, of which 4 were in favour of workers, 18 in favour of employers, 12 were settled by compromise. In two other disputes, work was resumed pending negotiations.

A dispute involving 3,200 paper mill workers at Northfleet, Blackburn, Darwen, Barrow, Glossop and West Hartlepool began on various dates between June 1 and June 7 against reductions in wages and was settled between June 10 and June 13 by compromise.

A dispute involving 3,224 rubber shoe makers and general rubber workers at Edinburgh was in effect between June 20 and June 27 over certain working arrangements under a new system. The settlement reached provided for a joint committee to consider grievances arising from the new system.

### Irish Free State

During the year 1932, the number of disputes which began was 70, involving 86 establishments and 4,222 workers. The time loss

for the year was 42,152 working days. Of the 70 disputes beginning in the year, 28 occurred in building and allied trades, 9 in public utilities and the remainder in various other industries. Of the 70 disputes, 37 were over wages questions, 23 over the engagement or dismissal of workers, one over hours of labour and the remaining 9 over other matters concerning conditions of employment. During the year, settlements were reached in 73 disputes as follows: workers' claims were wholly admitted in 26 cases, admitted in part in 15 cases and rejected in 15 cases; employers' claims were wholly successful in 4 cases, successful in part in 6 cases and rejected in 5 cases. Two other disputes had indeterminate results.

### France

During the last three months of 1932, there were 19 disputes in October involving 4,033 workers, 20 in November involving 2,432 workers and 10 in December involving 5,494 workers. Out of the 49 disputes occurring in these three months, 35 were over wages questions.

### Germany

Statistics for the year 1930 give the number of disputes as 366 involving 213,931 workers with a time loss of 3,816,971 working days. For the year 1931, the number of disputes was 504 involving 172,723 workers with a time loss of 1,921,973 working days.

### Netherlands

During the year 1932, 204 disputes began involving 31,230 workers with a time loss of 1,772,600 working days.

### United States

The number of disputes beginning in May was 110 and 81 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 32,077 and the time loss 792,469 working days for May.

Several thousand bituminous coal miners went on strike in southwestern Pennsylvania about July 25, insisting on the right of the union to organize and opposing the formation of company unions. By August 3, it was reported that between 35,000 and 40,000 miners were out on strike and serious disorders occurred. Through the intervention of the federal government and responding to an appeal from the President of the United States the dispute terminated on August 9.

About 3,300 technical employees of the motion picture producing industry at Hollywood,

California were on strike during the latter part of July over a question of the employment of non-union workers during a strike and also over other working conditions.

A strike of 30,000 men's clothing workers in New York City during the first week of July resulted in a 10 per cent wage increase.

During July, strikes of hosiery factory workers in various towns in Pennsylvania, involving in all about 17,000 workers were in progress.

Four thousand hosiery factory workers at Highpoint, North Carolina were also involved in a strike beginning July 17.

## LABOUR AND INDUSTRY IN ALBERTA DURING THE FISCAL YEAR 1932-33

THE last annual report of the Bureau of Labour of Alberta reviews conditions of trade and industry in the province for the fiscal year ending March 31, 1933. Under its administration are the following Acts: The Factories Act, the Minimum Wage Act, The Theatres Act, The Boilers' Act; The Labour Disputes Act and The Employment Offices Act.

*Trades and Industries.*—According to the report, the returns received for the fiscal year 1932-33 indicate a further decline in business. The decline, however, is not as great as that of the previous year. Returns from 2,624 firms showed 37,026 male employees over eighteen, 364 males under eighteen, 6,644 females over eighteen, 158 females under eighteen, and 428 apprentices.

Total payments for wages and salaries were \$55,602,593.44, of which sum, \$43,099,928.80 was paid to wage earners. The returns when considered as to employment by months for males indicate a break in the steady decline shown last year. This year there was a drop in numbers employed each month until May, when there was an improvement which continued until October with quite a drop during the months of November and December. April was the month of least employment, when 35,033 were employed, and October the month of greatest, when 37,127 were employed. As in previous years, the returns when considered by individual industries show great fluctuations, demonstrating that even during the periods of great depression for the unskilled work in the various industries men interchange from one to the other. The returns of monthly employment of females indicate very little change in volume of employment throughout the year. Summer holiday trade and Christmas activities provided less additional employment this year than was the case in previous years.

Tabular summaries are presented showing the average number of wage earners by months, the classified weekly wage rates and the weekly hours of labour. The table of "classified weekly wage rates" indicates that of the 37,390 male employees, the largest

group (5,317) were employed in the wage classification between \$30 and \$34.99 per week. Of the 7,230 female employees, the largest group (1,325) were paid wages ranging from \$12 to \$12.99 per week. The statistics regarding hours show that 20,243 employees are working 48 hours per week.

*Labour Disputes Act.*—The report of the Labour Disputes Act, by Hon. J. E. Brownlee, premier of the province, outlines the appointments of boards of conciliation and investigation under the Act. The details with respect to the boards established during the year were reviewed in the LABOUR GAZETTE, April, 1932, page 392, and June, 1932, page 648.

*Factory Inspection.*—Returns of Inspectors covering inspections under the Factories Act show further decreases in the staffs of practically all the places visited. A total of 4,481 inspections were made of 4,338 factories, shops, hotels, offices and office buildings in which were employed 17,943 males and 6,931 females. Recommendations relative to safety, sanitation, hours and wages, and the employment of children, to the number of 1,479, were made, all of which were carried out by employers. There were 628 inspections made of 575 elevators, in connection with which 412 safety recommendations were made.

*Theatre Inspection.*—The chief theatre inspector reported a reduction in revenue due to a reduction in the number of licences issued to projectionists. Details were given respecting two film fires and two prosecutions of exhibitors for violations of regulations. Particulars are also given respecting projection room inspections and recommendations.

*Boiler Inspection.*—The report of the chief boiler inspector indicated a total revenue for the year of \$21,088.58, derived from inspection fees, engineers' examinations, etc. During the year, there were 4,866 inspections of boilers and pressure vessels, and 2,320 certificates were issued.

*Employment Offices.*—According to the report of the Alberta Government Employment Offices, "a further decline in opportunities for employment intensified the work of the Employment Service for the year," registration

of applicants being considerably higher than ever previously recorded.

Of the 31,997 vacancies filled, 27,202 were for males and 4,795 for females. Placements in the male section were as follows: 13,324 sent to farms, 319 to building construction, 86 to clerical work, 220 to personal occupation, 3,605 to general labouring, 693 to lumbering, 70 to manufacturing industries, 203 to railways, 256 to mining, 408 to miscellaneous occupations, and 8,061 to casual employment. Of the female placements, 1,181 were sent to farms, 10 to clerical positions, 2,184 as domestics, 9 to miscellaneous occupations, and 1,409 to casual employment.

In the male section, 98.13 per cent of the listed vacancies were filled, and 47.73 per cent of the applicants were given employment. In the female section 94.95 per cent of the vacancies were filled, and 62.16 per cent of the applicants given employment.

Statistics of relief work show that a total of 1,795 single men were sent to relief camps operated by the Dominion Government, 985 to camps operated by the provincial government, while 1,293 were placed on farms. Direct relief cost in the year amounted to \$2,103,938.09, and 26,816 families were assisted thereby.

#### Women's Minimum Wages in Alberta

The tenth annual report of the Minimum Wage Board of Alberta, which is included in the annual report of the Bureau of Labour, records decreases in female employment under all orders except that governing retail trade.

The decreases in the numbers employed under the various orders are as follows: manufacturing, 79; laundries, 90; hotels and restaurants, 349; personal service, 43, and offices, 200.

A total of 3,391 inspections was made of 3,205 businesses in which were employed 7,891 experienced females and 546 learners; 340 orders for adjustment of wages, 73 for adjustment of hours and 28 for adjustment of staff so that not more than 25 per cent would be in receipt of apprentice wages, were made.

The court cases were taken against employers for failing to pay minimum wages. Convictions were obtained and employers were ordered to pay back wages.

During the year amendments were made to three orders, these amendments being given in the LABOUR GAZETTE, July, 1932, page 768, and December, 1932, page 1265.

Representations were made by the Manufacturers' Association that wage rates in Orders of the Board be reduced 10 per cent. No action has been taken in respect of this request, the Board deciding that before any definite decision is made, public hearings shall be held in the cities of Calgary and Edmonton.

Permission was granted to storekeepers in Calgary, Edmonton, Lethbridge, Medicine Hat, and Red Deer to work employees overtime to take care of Christmas shopping rush. Payment for overtime at not less than regular rates, and a report of all overtime worked was required.

### WORKMEN'S COMPENSATION IN QUEBEC IN 1932

THE fifth annual report of the Quebec Workmen's Compensation Commission reviews the work carried on under the Act of 1931 (LABOUR GAZETTE, May, 1931, page 525) during the calendar year 1932, being the second year of its operation. The Act came into force on September 1, 1931, and it was not possible, in the last report, to present complete figures for the four last months of that year. These figures, as well as provisional figures for 1932, are given in the present report. The operation of the Accident Fund during this period is found to have resulted in a considerable deficit, with the result that the Commission is faced with the necessity of increasing the rates of assessment for the current year 1933. However, it is pointed out that "while the deficit as indicated in the Provisional Financial Statement exceeds \$800,000, the Commission is of the opinion that possibly some of the reserves established may be too conservative. These reserves are calculated according to the same

formula as is applied by the Ontario Board, and up to the present employers in that Province have made no complaint. It is evident that a slight over-estimation in calculating reserves will permit the Fund to carry a considerable loss in any year without increase in the rates. It is believed, however, that this Commission should make the minimum rate increase feasible under the circumstances. It is therefore necessary to increase the 1932 actual rates to a level which would approximately yield an additional annual revenue of half a million dollars. If experience during the year proves that our reserves have been over estimated, no undue hardship will be imposed by the increase suggested which is absolutely necessary.

"It is absolutely essential that we obtain a greater measure of co-operation both from employers and doctors if the present scale of benefits under the Act is to be continued. The Commission believes that a very great number of claims have been certified as com-

pensable where no real incapacity for work has existed. These claims in the aggregate have imposed a serious burden on the Accident Fund as shown by figures contained in this report."

*Accidents.*—It is stated that the number of accidents reported to the Commission does not show the decrease which might have been anticipated as the result of the severe depression which presently exists. On the other hand, payrolls reported are far below normal, and the Commission has been faced with the necessity, during the latter part of the year 1932, of revising a great many assessments, owing to the actual payrolls being less than was anticipated by employers in their estimates at the commencement of the year.

The number of accidents reported in the four months ended December 31, 1931, was 12,734, and the number of accidents reported in the year 1932 was 34,414. It should be noted that these figures represent accidents reported during the years mentioned, but do not indicate the number of accidents occurring in each year as there will always be a considerable number of unreported accidents at the end of any year. The actual payrolls assessed for the four months ended December 31, 1931, were \$72,376,716.31. The number of employers as at December 31, 1931, was 6,120, and at the same date for 1932, 7,979. A considerable number of employers, it is stated, disappeared during the year 1932, either through bankruptcy, closing up of their businesses or other causes. It should also be noted that the forest industry comprises a very large number of employers who report through the large pulp and paper operators, and in the number of employers quoted above, these individual contractors or sub-contractors are not included. Possibly, the total number of employers falling under the Act should be estimated at the end of the year 1932 at 10,000.

The claims allowed for accidents occurring in the year 1931 are as follows: Medical aid only, 6,294; Compensation, 6,370; Death, 53.

*Benefits.*—The Commission awarded benefits in 1931 amounting to \$345,162.33 distributed as follows: Schedule 1 compensation, \$286,880.52; Schedule 1 medical aid, \$34,557.21; Schedule 2, \$23,724.60.

The benefits awarded in 1932 amounted to \$2,852,292.90, distributed as follows: Schedule 1 compensation, \$1,776,390.57; Schedule 1 medical aid, \$528,726.97; Schedule 2, \$547,175.36.

These figures represent benefits awarded during the years 1931 and 1932 and do not refer to all accidents happening in each year, that is the awards for 1932 comprise a great

number of claims for accidents which occurred in 1931.

The Commission report that they were faced with a serious problem owing to the complete change of administration required by the new Act. It required several months to obtain the co-operation of employers and doctors so that reports could be sent to the commission promptly, and for this reason, the actual awards during the four months ended December 31, 1931, were not large. The accumulation of unpaid claims at the end of the year 1931 is indicated by the complete figures for the four months in question, which show that in Schedule 1 only, there were paid \$835,411.21 for compensation and \$226,568.63 for medical aid for 1931 accidents. It may be added that the delay which occurred in the payment of compensation towards the close of the year 1931 was eliminated in 1932 and at present the Commission receives very few complaints regarding delay in paying the claimant the indemnity to which he may be entitled. When a delay is experienced, it is generally due to the failure of the employer or the doctor to send a report promptly as required by the Act.

*Administration.*—The total administration expenses for 1932, less the amount charged to the 1928 Act, were 8.49 per cent of all benefits awarded. The report refers to the difficulty of apportioning expenses of administration as between the 1928 and the 1931 Acts, which are administered by the Commission concurrently. It was decided that at the end of the year 1931, the Commission would issue a final assessment against insurance companies and self-insurers under the 1928 Act which would take care of all claims in suspense, thus avoiding an additional assessment at the end of the year 1932 for a minimum amount. Actually, the expenses charged to the 1928 Act in the year 1932 amounted to \$9,287.39 only. The total expense of administration during the year 1932 amounted to \$251,683.56. The chief items comprised in these expenses are salaries of Commission and staff \$190,290.33, and printing stationery and office supplies \$28,505.24. "The Commission is faced with the same problem as all other employers at the present time, namely that the number of employees necessary to carry on the work could be somewhat reduced, but owing to the practical impossibility of employment being found elsewhere, it has not yet been decided to reduce the number of employees; but if present conditions continue, the Commission will be advised to take some action in this respect. Some reduction has been made in disbursements for salaries owing to employees leaving our service and who have not been replaced. No increases in salary are being made at the present time."

It is noted that the Commission is obliged to meet the expense of maintaining offices at both Quebec and Montreal. The chief medical officer has headquarters at Quebec, but early in 1932 an assistant Medical Officer was placed at Montreal, in order that difficult claims might be disposed of as quickly as possible. "In order that uniformity of procedure should exist in estimating disabilities, the Chief Medical Officer or one of his assistants spends two or three days per week at the Montreal Office and in many claims a joint examination is arranged so that the Commission may have full information from a medical point of view before making awards. The doctor treating the workman is always permitted to be present at an examination if he so desires. Examinations carried out at Quebec are always in the presence of two medical officers, and in the more difficult cases the Chief Medical Officer assists so that the report may bear his signature. In exceptional cases, requiring special knowledge of some branch of medicine, the claimant is directed to a specialist and his report is submitted to the Chief Medical Officer. It is not believed that the appointment of a Review Board, as has been suggested in some quarters, would serve any useful purpose from a medical point of view, in view of the precautions taken as outlined herein and the deliberations of such a Board might cause delay in settling claims, plus extra expense."

The Commission receives no contribution from the Provincial Government as regards expenses of administration, other than claims chargeable under Schedule 2 of the Act, with the exception of the Head Office building and the Montreal Office which are furnished free of rent or taxes. All such expenses are charged directly to the employer.

*Fraudulent Claims.*—The report contains the following paragraphs under this heading: "The Commission has been faced with the necessity during the past year of disposing of a great number of claims having little or no merit. We believe that this experience is general in other jurisdictions owing to the extreme difficulty of obtaining employment and when work is available, it is usually on a part time basis. The disposal of these claims involves complete investigations, so that no injustice may be done, and this procedure is necessarily costly, particularly in outlying districts or unorganized territory.

"An even more serious difficulty arose in the forest industry, namely that a number of workmen voluntarily mutilated themselves in order to obtain indemnities. Such injuries are usually confined to axe wounds involving the amputation of the left index finger or little finger. In practically all such cases, it

is found that the finger is cut off cleanly without any injury whatever to the other fingers. When it is realized that these men usually work with mittens and considering that an axe is a heavy instrument, it is almost inconceivable that in so many cases, one finger alone would be completely cut off without the axe touching the other fingers. The Commission has made every effort to put a stop to such fraudulent claims and has been successful in obtaining the conviction of a workman of Ste. Adelaide de Pabos, who on September 26th, cut off his left index finger while in the employ of the Anglo-Canadian Pulp and Paper Mills Limited. This workman was convicted of making a fraudulent claim and was sentenced to four months hard labour. The Commission has had the fullest possible co-operation of the Department of the Attorney General and every fraudulent claim of this kind will be carefully investigated and if proof is obtained, the claimant will be arrested.

"It is believed that these mutilations in the forest industry were carried out under the impression that a very large indemnity would be paid for the loss of a finger. In order to put a stop to such abuses, the Commission has recently revised its schedule with respect to such injuries and a minimum indemnity only is paid. This decision has resulted in a very considerable decrease in the number of such mutilations reported."

*Regulations, etc.*—No amendments to the Workmen's Compensation Act, 1931, were passed at the last Session of the Legislature. The Commission, however, passed several additional regulations based on the experience during the year. It was found to be practically impossible to locate small employers engaged in construction or transportation and as the result, a regulation was passed to the effect that where less than four workmen are usually employed in Class 24 and also in the business of transportation, such employers would not be required to report under Schedule 1 and their workmen will not be covered except by application. It was also found that small sawmills operated for the benefit of colonists or others could not be dealt with owing to the practical impossibility of collecting an assessment or obtaining the proper reports. The Commission, therefore, passed a regulation to the effect that sawmills would not be subject to the Act except by application, except where seven or more workmen are usually employed, and also it is necessary that such sawmill should constitute the principal industry of the employer or represent an incidental operation of an industry otherwise subject to the Act. A regulation was passed, effective as from January 1, 1933, with

respect to garages. Previously, only the mechanics in garages were covered, together with the employees directly connected with repair work. It was found to be extremely difficult to obtain a proper segregation of such pay-rolls and therefore, in all cases where six or more workmen are generally employed, every establishment engaged in the sale, repair or maintenance of motor vehicles is obliged to make a report to the Commission and also public or storage garages with or without repair shops are subject in the same way as from January 1, 1933.

*Safety Associations.*—Section 106 of the Act provides for the formation of Associations for accident prevention and in this connection, the Commission may make a special grant towards the expenses of any such Association. The lines along which such Associations should operate were indicated by the Quebec Social Insurance Commission. The Commission recommended that the regulations of such Associations should be approved by the chief inspector of industrial establishments and also by the chief medical officer in charge of industrial hygiene in order that any contradiction with their regulations should be avoided. It is further recommended that the activities of such associations should be directed along the following lines: (1) safety education of employers and employees by conferences, films, posters, etc.; (2) (a) formation of safety committees in industrial establishments; (b) organization of first aid services; (c) organization of a medical service in large establishments under the direction of a medical man or a qualified nurse and a co-operative organization of a similar nature for small workshops.

In view of representations made by employers, a grant of \$35,000 was made to the Quebec Association for the Prevention of Industrial Accidents for the year 1932 and a grant of \$7,499.98 to the Quebec Pulp and Paper Safety Association which was organized by Class 2 employers. An arrangement has been made with Mr. Arthur Gaboury, General Manager of the Quebec Association for the Prevention of Industrial Accidents, to give him the names of all employers showing an unfavourable accident experience, so that safety measures may be commenced without delay. It is hoped that such educational work will result in reducing the number of accidents in industrial establishments.

*Funds.*—The new Act had been in operation for less than one year when the Accident Fund was burdened with a very serious disaster, namely the explosion which occurred in the shipyard of Canadian Vickers Limited involving heavy loss of life. The indemnities

awarded for this disaster were in excess of \$150,000 and there was no disaster reserve fund to meet such a contingency. It was decided therefore, to levy an assessment of 1 per cent on all employers for the year 1932 and this created a reserve of \$23,766.46 of which \$20,000 was immediately credited to Group 1 of Class 9 leaving of course, a very heavy deficit remaining in the Class as the result of the disaster.

The Commission is obliged to set aside the amount required for the Pension Fund according to the actuarial tables. In the last report it was mentioned that the Board's consulting actuary had calculated tables on the basis of 4½ per cent interest, but in view of the comparatively high rate of interest obtainable on first class securities during the year 1932, it was deemed advisable to set aside reserves on the basis of 5 per cent interest. The reserve for pensions payable to widows and to workmen permanently disabled amounted at December 31, 1932, to \$872,636.96. This figure was established by crediting the Pension Fund with interest earned and deducting payments made up to December 31, 1932. This final figure has been checked on an actuarial basis which agrees very closely. The average rate of interest earned on the Board's investments was 5.15 per cent, which, it was considered, justified calculations on 5 per cent basis with respect to the Pension Fund.

In the last annual report, the Commission expressed a doubt whether the Ontario rates, which were being followed, would prove to be adequate for the Province of Quebec, owing to the number of employers in this Province being less than in Ontario. With the exception of a few classes, the rates proved to be entirely inadequate, and the provisional deficit of the Accident Fund as at December 31, 1932, amounted to \$829,179.08. "It should be distinctly understood that this provisional deficit is based in part on estimates, and experience alone during 1933 will show whether this figure should be increased or decreased. We are inclined to think that possibly, the reserve set aside for unpaid claims may be higher than necessary, though the calculations are based on the method adopted for a number of years by the Statistician of the Ontario Board."

*Assessments.*—The total assessments in all the classes of Schedule 1 for the year 1932 including estimated adjustments amounted to \$2,138,734.38. This figure is arrived at after deducting a reserve of \$237,764.64 representing 10 per cent of the assessments issued for the year 1932. "We do not believe," the report states, "that this reserve is exaggerated in view of the great falling off in all lines of

industry during the year, which will in all probability result in actual payrolls considerably less than the estimates furnished by employers at the commencement of the year 1932."

The assessment account was credited with collections under Section 98 of the Act for delay in submitting payrolls, etc., and interest allotted to the various classes after crediting the necessary proportion to the Pension Fund. The total net income for the year after allowing for the reserve for adjusted payrolls amounted to \$2,193,124.49.

*Compensation.*—The compensation paid for accidents happening during the year 1932 amounted to \$692,065.81 and the pensions awarded for accidents in the year 1932 are capitalized at \$537,494.07. The Commission estimates that the compensation outstanding for current claims should be estimated at \$950,800.39, making a total of compensation awarded and outstanding of \$2,180,360.27. The medical aid paid amounts to \$336,715.55 and the outstanding medical accounts are estimated at \$231,205.94, making a total of medical aid paid or outstanding for accidents occurring in the year 1932 of \$567,921.49. Administration expenses debited to Schedule 1 employers amounted to \$187,369.74. Disaster reserve of 1 per cent required \$23,776.46, legal expenses \$8,803.54 and grants to safety associations \$42,499.98. The total expenditures for the year 1932 amounted to \$3,010,731.48, whereas assessments and credits amounted to \$2,193,124.49, showing a provisional deficit for the year 1932 of \$817,606.99 which added to the deficit for the year 1931 which amounted to \$11,572.09 makes a total provisional deficit in Schedule 1 funds of \$829,179.08.

*Schedule 2 Employers.*—The Commission allows Schedule 2 employers to make their own payments to injured workmen or their dependants unless there are exceptional circumstances. Such employers are obliged to report to the Commission, showing the amounts paid to claimants, and in cases of permanent incapacity or death an award is issued against the employer concerned, showing the amount he is called upon to pay under the Act. In 1931, the Commission awarded \$23,724.60 against Schedule 2 employers and \$547,175.36 in the year 1932, making a total of \$570,899.96 awarded against Schedule 2 employers for the two years.

The report contains numerous statistical tables, including financial statement; number of firms in Schedule 1, by classes and groups; analysis of administration costs; pension fund, by classes; number of accidents, with month and locality; time loss and average wage,

1931; total and average compensation and medical aid costs; sex and marital condition of workers; nature of injuries; industrial diseases; particulars of death cases, etc.

### Control of High Explosives in Wood Operations in Quebec

For the purpose of removing some of the dangers resulting from the use of explosives in the woods in the province the Quebec Pulp and Paper Safety Association has collected a list of instructions and recommendations in regard to such work. The regulations cover the conveyance, storage and thawing of dynamite, and the use of explosives. The foreman, it is stated, is to be held primarily responsible for the carrying out of the safety rules.

Under the heading of conveyance the rules state that jolting should be avoided by secure stowing of the explosive; detonators should not be carried with dynamite; nor should oil, gasoline, metal tools or matches be in the same vehicle; a driver should avoid halts, and when necessary he should keep under observation his load; the conveyance should have springs and be free from bolts and nails which might come in contact with cases of explosives; cartridges carried from storage should be carried in a wooden box or pail or basket, the vessel not being filled to capacity.

Dynamite, fuses and caps should be issued only to experienced men and in quantities for daily use. Separated, unheated buildings should be used for storage magazines, nor should any empty dynamite box be burned in a stove. Also men going into explosive store-houses should not even have pipes, matches or cigarettes in their possession, and when getting rid of old or poor dynamite, only a few sticks at a time should be burned and at a safe distance from those destroying it. No magazine is to be used as a thaw house.

In thawing explosives special receptacles should be used and instructions are detailed as to the effective and safe way of performing this work.

A number of directions are given for the use of explosives including the testing of safety fuses. If a charge does not explode no one should be allowed to approach for at least an hour, and, if possible, it should be fired by putting another charge by it.

The Home Office (England and Wales) recently published the first of a projected quarterly series of abstracts from reports of industrial accidents. It contains reports of thirty accidents accompanied by comments on their causes and suggestions for the prevention of similar accidents in the future.

## HOURS OF WORK IN THE BUILDING INDUSTRY IN THE PROVINCE OF QUEBEC

A SECOND Order in Council was published recently under the Hours of Work Act, 1933, of the Province of Quebec, establishing a 40-hour week for the building industry in the Quebec Division and the Eastern Township Division of the Province, as from July 15, 1933. The text of the first order, governing hours of work in the same industry in the District of Montreal, was given in the *LABOUR GAZETTE*, July, 1933, page 701. The Act respecting the Limiting of Working Hours was outlined on page 695 in the same issue, in a summary of the labour legislation on the recent session of the Legislature.

*No. 1496, July 12, 1933, respecting the number of hours during which a workman may work.*

The Honourable Minister of Labour in a memorandum dated the 12th of July, 1933, sets forth:

1. That in virtue of article 1 of the Act 23 George V, chapter 40, the Lieutenant-Governor in Council may order the number of hours per day or per week during which a workman, employed in manual labour, may work;

2. That the building industry, in conformity with article 3 of the said chapter, is not in any manner subject to the competition of other countries or other provinces;

3. That pursuant to article 5, he called together, on the 28th of June, 1933, the official representatives of the district of Quebec Building Board of Trade, of the international Unions of the building trades of the same district, the Catholic Syndicates of such trades of the Districts of Quebec and Trois Rivières, and consulted them on the mode of applying a limitation of working hours in the said industry;

4. That, pursuant to article 5, he called together on the 10th of July, the official representatives of the Catholic syndicates of the building trades of Sherbrooke and of the International Unions of the Building trades of the same district and several contractors of the Eastern Townships Division, and consulted them on the mode of applying the limitation of working hours in the said industry.

And therefore, the Honourable the Minister recommends:

That the following provisions be put into force:

Interpretation of the terms for the purpose of the present Order

The following terms will have the significance hereinafter given:

The words "building industry" comprise the building, repairing or demolishing of buildings of every kind and cover especially the men employed in the following trades:

Bricklayers, asbestos-layers, carpenters, joiners, cement finishers, roofers, electricians, tin-smiths, blacksmith (if employed on the job) crane-men, stationary engineers and firemen, labourers and excavators, lathmen, masons, reinforced concrete workmen, bridgemen, elevator builders, tile-layers, painters, plasterers, plumbers and pipe fitters, marble-polishers,

stone cutters, and joint finishers, the helpers and apprentices.

The words "Quebec Division" will comprise the judicial districts of Quebec, Trois Rivières, Beauce, Montmagny, Nicolet, Kamouraska, Chicoutimi, Roberval, Saguenay, Rimouski, Gaspe, and Abitibi (pursuant to the Order in Council No. 1036, of the 17th of June, 1921, determining the boundaries of the district of Quebec for the inspection of industrial establishments).

The words "Eastern Townships Division" will comprise the judicial districts of Bedford, Saint Francis and Arthabaska (pursuant to the Order in Council No. 1036, of the 17th of June, 1921, determining the boundaries of the district of Quebec for the inspection of industrial establishments).

The word "contractor" designates any person, association or corporation;

(a) Contracting or sub-contracting for works by the job, for percentage or by the day;

(b) Building on his own account;

*Article 1.*—From and after the 15th of July, 1933, the duration of effective labour in the building industry and within the limits of the Quebec Division and the Eastern Townships Division, must not exceed eight hours per day.

The total hours of effective labour, in the course of one single week, must not, in any case, exceed forty hours.

Any contractor may, however, at his option, adopt the two shift system, pursuant to the provisions of article 2.

*Article 2.*—Notwithstanding the provisions of article 1, any contractor undertaking works for a municipal or school corporation, fabrique or parish trustees, the Government of this Province, must establish on his job the two shift system, with duration for each shift of six hours of effective labour for the six working days of the week.

The contractor of works for an institution, association or corporation, the costs whereof are paid or guaranteed in a proportion of at least 50 per cent by the Government of this Province or by a municipal corporation, or by both, shall also be obliged to maintain the two shift system.

*Article 3.*—The provisions of article 2 shall be applicable only from the 1st of May to the 1st of October of any one year, and if the cost of the work exceeds \$20,000.

*Article 4.*—The present Order does not apply;

(a) If a contract by the job was signed before its coming into force.

(b) If the costs of the whole works to be executed on a particular job, including salaries and materials, does not exceed \$300 for the Quebec Division and \$200 for the Eastern Townships Division. The different jobs constituting the whole works shall only be considered as separate jobs when the different contracts and sub-contracts constituting same are separated one from the other by a period of at least three months.

(c) If a person performs work with his own hands on his property.

*Article 5.*—The Minister of Labour may, after an investigation held by the Inspectors of industrial establishment, grant permits of derogation to the present Order for preparatory, complementary or urgent work.

## INDUSTRIAL HYGIENE IN THE PROVINCE OF ONTARIO IN 1932

THE eighth annual report of the Department of Health of Ontario contains reports of the work carried on during 1932 by the various branches in the interest of public health in the Province. The year was unusually free from epidemics, this result being due in some measure to the precautionary measures by the Department for the control of communicable diseases, including diphtheria, typhoid, small pox, scarlet fever and undulant fever. The report describes the laboratory work that was carried on during the year, and notes the progress of health education by means of instruction in public schools in the Province. In regard to the health of workers in industry it is stated that in spite of the economic depression, occupational disease prevention work has markedly increased during the past year. "Employers appear to appreciate the fact that occupational disease involves an increase in operating overhead which is preventable, and they are taking advantage of the services of our department to eliminate, in so far as possible, preventable occupational disease. In this connection, we feel that the Department is rendering to industry a most important service in these difficult times."

The work of the Division of Industrial Hygiene is reviewed by Dr. J. Grant Cunningham, the director. "The demands upon the facilities which the Division of Industrial Hygiene has to offer industry in Ontario have considerably increased," he states, "in spite of conditions of industrial unemployment. Probably this is explained by the fact that such conditions emphasize the seriousness of sickness from an economic standpoint, and that as far as occupational diseases are concerned, labour turnover, a factor in their incidence, is reduced to a minimum. It is very interesting to see the extent to which industrial executives, with few exceptions, are striving to retain, at least in partial employment, as large a proportion of regular employees as possible.

"Arrangements existing previous to 1930 for the supervision of general health, conducted on a voluntary basis by employers, have in some instances been curtailed but seldom discontinued, suggesting that the procedure rests upon a sound basis. Two or three examples will suffice—a company employing between 60 and 70 workers has not only retained but increased its facilities for first aid in accidents and for the diagnosis of disease in its early stages, arising among employees; an arrangement which is too frequently looked upon by the small plant as being prohibitive in cost. As a matter of fact, it need involve

no higher *per capita* cost in the small than in the large plant; three plants, close together, have maintained a combined arrangement for medical supervision with plant and visiting nursing, with no suggestion of curtailment; one of the largest plants working on short time with a 50 per cent reduction in employees has maintained its services for health supervision unimpaired. If there is need for something in the nature of health insurance, it would be materially reduced if this type of health supervision in industry to control ill health as far as this is possible, were more general."

Increased interest on the part of employers has been apparent in the subject of the ventilation of factories and offices. Researches by Dr. F. M. Bulmer, of the Division, showed that overheating in winter is the most common failing; and that in general, suitable conditions of air circulation, especially in office buildings, are difficult to obtain, so that equipment for this purpose should be carefully considered before installations are made.

Dr. Cunningham reports that diseases due specifically to industrial work have occupied much attention. Sixteen occupational diseases are compensable in Ontario but until this year the reporting of occupational diseases, except for compensation purposes, had not been provided for. At the last session of the legislature, the Factory Act was amended, and regulations were passed requiring all physicians to report to the Division any case of occupational disease coming to their attention. Examinations of occupational disease that were conducted by Dr. A. R. Riddell or under his supervision exceeded one thousand. Those referred to the Division by outside agencies following a particular exposure numbered 373, of which 191 were from the Workmen's Compensation Board. Suspected cases of lead poisoning and silicosis predominate, with a few cases each of benzol, chrome, arsenic, two of carbon tetrachloride, one of mercury and one of anthrax. The lead examinations included a group from one plant, with a major lead hazard, where all exposed gave indications of lead absorption. Analysis of accumulated dust in a separate building and next door to the plant cafeteria showed a lead content of 12 per cent. This emphasizes the ease with which lead is spread to contaminate the air and become a hazard to health. In another small plant, six definite cases of lead poisoning were discovered. These workmen had had an immediate previous exposure to arsenic.

Surveys were continued to determine the trades or occupations involving exposure to silica dust. This year these have had to do

mainly with the foundry group including men from moulding, grinding, sandblasting, tumbling, sand reclaiming and vitreous enamel-spraying operations. Workmen were selected having a period of exposure which experience suggested might be long enough to produce demonstrable effects, and about 600 examinations to date in this group revealed the fact that over 10 per cent of them showed silicosis.

"A thousand general examinations, many with X-ray, with about 600 blood examinations, involving individual reports for physicians and composite reports for employers, have taxed our facilities, but it may be possible to reduce the number on account of the new regulation in the Factory Act providing for periodic physical examinations at the expense of the employer upon recommendation of this Division to the Chief Factory Inspector. Some plants with a major hazard to health, notably storage battery manufacturing plants, some years ago, voluntarily instituted such examinations."

Special attention is now being given by the Division to the subject of the control of dust

and fumes, and a special investigator has been appointed to this study. Continuous studies of poisonous materials and their effects on workers are carried on in the industrial hygiene laboratories. "The number of instances where neither employer nor employee is aware of the constituents of materials used, is very large. A similar service is available to and used by the Industrial Accident Prevention Association inspectors so that two field staffs are served by a small central technical staff for the control of occupational disease. Apart from the ill-health associated with these diseases, the heavy compensation costs involved in some of them, especially silicosis in Ontario, emphasizes the need for these facilities, indeed, even for research facilities beyond the scope of the Department."

The Department's report also includes the reports of the chief sanitary inspector and of the Divisions of Child Hygiene, Dental Services, Laboratories, Nurse Registration, Public Health Education; the report of the chief inspector of Health regarding cancer; and reports from District officers of health throughout the province.

## PUBLIC WELFARE IN ONTARIO IN 1931-32

The second annual report of the Department of Public Welfare of Ontario deals with the administrative period 1931-32. As a result of the recommendations of the Ross Commission on Public Welfare, this department was established by Order in Council on September 16, 1930, and the following divisions placed under its control: The Mothers' Allowances Commission; the Old Age Pensions Commission; the Soldiers' Aid Commission; Children's Aid Branch; Industrial Schools; Ontario Training Schools; Houses of Refuge and Orphanages.

*Mothers' Allowances Commission.*—Noteworthy in the twelfth report of the Mothers' Allowances Commission is the official statement that "despite the many demands made upon its resources the government has never asked the Commission to curtail its efforts to assist the widow and the orphan." However, the expenditures did not rise above normal, and showed a decrease in two classifications.

The legislation, which became effective in 1920, provides for the children of widows, deserted wives, women with totally and permanently incapacitated husbands, and foster mothers who have the care of orphan children. In the administration of this Act the following scale of payments has been adopted. a mother with two children, under sixteen years of age, living in a rural district—\$30 per month; in a town of 5,000 population or over, or in a separated town—\$35 per month; in a

city the rate of allowance is \$40 per month. For each additional child under sixteen years of age in the mother's care and dependent on her, \$5 per month is added to the scale.

The municipality in which a beneficiary has resided for one year is required to contribute 50 per cent of the allowances granted, and the cost of administration is borne by the province. In 1931-32, this was 3·7 per cent of the amount paid out.

During the year, 1,931 new applications for allowances were made. Through the investigations of the Local Boards and the Staff of Departmental Investigators it was found that 31·7 per cent of all applications for the year failed to come within the requirements of the Act. In the same period, 1,333 allowances were, for various reasons, cancelled. Of these 47 per cent was due to the activities of the staff Investigators.

A summary of the year's activity indicates that the total expenditure on allowances was \$2,698,788.50; that the number of families on allowance was 7,418; that the number of children in these families was 21,468, the average number of children per family being 2·81.

Dealing with its methods of investigation the report states:

"Almost every variety of family problem is submitted to the Commission and its staff for solution. An effort has been made in the past few years to make beneficiaries budget

conscious, with some degree of success. In some cases it is found necessary to have the cheques administered, and this is generally followed by good results. Advice in regard to food values, health habits, the persuading and encouraging of children to drink milk and eat lots of vegetables, and the insistence on cleanliness of the home where mothers have been in the habit for years of being careless in this regard, are among the duties of the Investigator. The results are astonishing, especially in homes where poverty had prevailed, on account of unemployment, sickness, and in many cases the inability of the husband, when alive, to earn sufficient to provide adequately for the family.

"A branch of this endeavour which may require considerable attention in the future is that of giving vocational training in a new occupation for some who are incapacitated for their original occupations and who might yet be at least partially self-supporting in a new type of work. Some experimentation has been made along this line by the Medical Officer and not without success.

*Old Age Pensions.*—According to the third annual report of the Old Age Pensions Commission, the province of Ontario in its third year brought relief to thousands of citizens and at the close of the fiscal year, October 31, 1932, pensioners on the list numbered 41,548, an increase of 1,259 over the previous year. It is pointed out that the total number of citizens in Ontario seventy years of age and over is 130,000, indicating that less than one-third of the people of the province who have reached the seventy year mark are in receipt of the pension. The total expenditure for the year in the province on pensions was \$9,097,496.45, of which amount the Dominion provided \$6,805,052.40; the provincial government, \$1,466,888.26, and the municipalities, \$825,555.79. (These statistics for each province and all Canada are given quarterly in the LABOUR GAZETTE, the most recent presentation being in the last issue at page 687.)

The report states that every care has been exercised by the Commission to administer The Old Age Pensions Act justly and yet with reasonable economy. Careful estimate has been made of the real and liquid assets of the applicants and, where possible, children have been called upon to assist their parents under the provisions of The Parents Maintenance Act. The inspectorial staff were able to investigate all new applications as well as review a large number of pensions previously granted. Beneficial results followed this review. Cases of misrepresentation of assets or concealment of assets were brought to light, and restitution was required for moneys paid as pension. The

review quite frequently disclosed changed conditions on the part of the pensioner, or more detailed information as to the pensioner's assets, and thus justified a revision of the amount paid in many cases.

*Veterans' Welfare.*—Operating under the Department are two organizations whose activities are directed toward the welfare of ex-service men and their dependants. These are the Soldiers' Aid Commission and the Veterans' Welfare Service. The work of the former is largely in the nature of meeting emergency calls, until relief may be obtained through the proper channels. Children of ex-service men who are wards of the Commission are also given every educational facility. Its sources of revenue are derived from trust funds. The latter body functions both as a relief and employment agency. During the year, 129 ex-service men and 122 dependants were placed in employment by the Toronto office; 62 received financial aid and 223 other assistance.

*Child Welfare.*—The work of a number of agencies having to deal with various phases of child welfare is also under the jurisdiction of the department. One of the most important of these is the Children's Aid Branch with its network of Children's Aid Societies throughout the province. The statistical report shows that in 1932 there were 699 wards who came under the protection of the Act, 797 were released from supervision, leaving 6,751 wards under supervision at the end of the fiscal year 1932.

An avenue establishing the illegitimate child in society is the Legal Adoption Act, which together with the children of Unmarried Parents' Act is administered by the Children's Aid Branch. A total of 858 adoption orders were signed during the year, being an increase of 39 over last year. In eleven years operation, this Act has bestowed its benefits upon 7,654 adopted children. There were 2,148 cases under the children of Unmarried Parents Act as compared with 2,250 in the year previous.

The thirty-six orphanages in the province had 2,784 children under their care during the year, while the 46 refuges provided protection for 3,246 persons, a decrease of 41. The total number of inmates in the county refuges was 2,064 as compared with 1,988 in 1931.

There were 599 pupils in the four industrial schools of the province at the close of the fiscal year—a decrease of 41.

Reports are also presented concerning the activities of the training school for boys located at Bowmanville, which had an average daily attendance of 151 boys; and the Ontario Society for Crippled Children which gave service to 222 new cases during the year.

## REGULATIONS FOR SAFETY OF WORK IN MINES IN QUEBEC

NEW regulations under the Quebec Mining Act (Revised Statutes of Quebec, 1925, chapter 80) relating to the safety of work in mines were published in the *Quebec Official Gazette*, July 8, 1933, as follows:—

### REGULATIONS

#### Steam Boilers

1. Every operator having one or more boilers used for generating steam shall give a written notice thereof to the Bureau of Mines, mentioning the name of the maker, the shop number, the date of construction, the name and address of issuer of last certificate of inspection and the date appearing thereon.

2. No boiler shall be put in use unless permission has been granted by the Minister, who may require that this boiler be inspected and certified as to its safe maximum working pressure.

3. The Minister may require an annual inspection of each boiler to be made by a person authorized to inspect boilers under and according to the prescriptions of chapter 182A, R.S.P.Q., 1925, as enacted by 23 George V. Chapter 71. Such person shall make a written report of this inspection to the Minister of Mines.

4. All steam boilers and accessories pertaining thereto, including safety valves, steam gauges and water gauges, shall be maintained in a proper working condition.

5. No steam boiler shall be installed hereafter in a building situated less than fifty feet from a shaft house.

#### Compressed Air Tanks

6. Every receptacle storing compressed air shall be equipped with a drain cock at the lowest part. Such receptacle shall be drained once every twenty-four hours so as to remove all accumulation of oil or other material.

7. The first tank on a main air line, or the first tank on each branch line if there is no tank between the compressor and the branching point, shall be equipped with an air pressure gauge and a safety valve.

8. The Minister may require an annual inspection of every tank storing compressed air above forty pounds per square inch pressure, with a capacity in excess of six cubic feet, to be made by a person authorized to inspect pressure vessels under and according to the prescription of chapter 182-A, R.S.P.Q., 1925, as enacted by 23 George V, chapter 71. Such person shall make a written report of this inspection to the Minister of Mines.

#### Hoistmen

9. Any person operating a hoisting engine used in lowering or raising persons or in shaft sinking shall:

(a) Be the holder of a certificate issued within the last twelve months by a duly qualified medical practitioner, on a form supplied by the Bureau of Mines, stating that the holder has been examined, and found free from mental or bodily infirmities and defects to his eyesight and hearing which in the performance of his duties may endanger the safety of the employees;

(b) Have had at least one month's experience on a reversing hoist.

#### Buildings

10. Calcium carbide shall be stored on the surface only, in a suitable dry place and in its original container.

11. Oily waste and rags must be kept in closed metallic containers carrying a notice on which is written the word "flammable". Such receptacles shall not be located in or near a stairway.

12. All exits, hallways and stairways of buildings must be adequate to permit a rapid egress of all employees; exits, hallways and stairways shall not be used for storing purposes.

13. All stairs exceeding five feet in height shall be provided with a substantial hand-rail.

14. Runways and stagings more than five feet from the floor, used for oiling and other purposes, shall be provided with hand railings.

15. Every opening in a floor shall be effectively guarded.

16. Unless so situated as to prevent any person coming into accidental contact therewith, all projecting moving pieces and other dangerous parts of machinery, especially connecting rods, fly-wheels, gears, pulleys, belts, and shafting shall be equipped with suitable guards, casings or railings.

17. Every power driven grinding wheel shall be provided with a hooded guard of sufficient strength to withstand the shock of the wheel bursting.

18. Except on very slowly moving pulleys, the direct mounting and shifting of belts by hand is forbidden.

#### Haulage

19. Every frog point in a track shall have a wedge block of wood or metal.

20. Every locomotive trolley or motor car in use shall be equipped with a light and with a gong, bell, whistle or horn which shall be sounded when starting and at such other times as warning of danger may be required.

#### General

21. Where in or about any mine there occurs: (a) A case of overwinding a skip or cage; (b) A breakage of a rope or cable used for hoisting; (c) An unexpected inrush of water; (d) An outbreak of fire below grounds; or (e) A premature or unexpected explosion; whether or not loss of life or personal injury is caused thereby, the operator shall, within the next twenty four hours after the occurrence, send notice thereof in writing to the inspector, and shall furnish such particulars as may assist the inspector in making inquiry into the circumstances.

Regulations under the provisions of the Electrical Inspection Act, 1932, of Prince Edward Island (LABOUR GAZETTE, November, 1932, page 1180) were published in the provincial *Gazette*, July 29, 1932. All electrical installations in any building in the province are made subject to inspection by a provincial inspector. The Act provides that installations shall conform to the requirements of the latest authorized edition of the Canadian Electrical Code.

## MINERAL INDUSTRY IN BRITISH COLUMBIA IN 1932

According to the annual report of the British Columbia Bureau of Mines, the gross value of the mineral production of the province in 1932 was \$28,241,618, a decrease of \$6,641,563, or 19 per cent as compared with 1931. Mining and prospecting activities are detailed in the volume, which also contains the reports of resident mining engineers and the inspectors of mines.

The mineral production of the province is divided into four classes—metal-mining, coal-mining, structural materials, and miscellaneous metals and minerals. Of these, the first class is by far the most important, with a production for 1932 valued at \$19,538,989 (including placer gold). This is followed by coal, with an output of \$6,523,644, and structural materials and miscellaneous metals and minerals, totalling together \$2,178,985.

By value, the various products of the mineral industry produced in 1932 are ranked in the following order: coal, lead, zinc, gold, copper, silver, structural materials, miscellaneous metals and minerals.

*Labour, Employment and Accidents.*—There were 3,608 persons employed in coal mining and 2,255 employed in metal mining in 1932.

During 1932 twenty-one coal companies operated twenty-three collieries, with forty-eight mines, employing 2,628 men underground. In the supervision of underground employees there were fifteen managers, one safety engineer, eighteen overmen, 111 firebosses and shotlighters, a total of 146, or one official for every sixteen persons employed underground. During the year there were 425 tons of coal mined per employee, and 584 tons mined per employee underground.

There were eight fatal accidents in coal mining as compared with five in 1931. The ratio of fatal accidents per 1,000 persons employed was 2.21, as compared with 1.22 in 1931. In 1930 the ratio was 11.62; in 1929, 2.38; in 1928, 2.64; in 1927, 2.10; in 1926, 1.88; in 1925, 1.10; in 1924, 1.66; in 1923, 7.32; the average for the ten-year period being 3.47. The number of fatal accidents per 1,000,000 tons produced during 1932 was 5.21; during 1931 the figure was 2.81; in 1930, 28.64; in 1929, 5.33; in 1928, 5.54; in 1927, 4.48; in 1926, 4.3; in 1925, 2.45; in 1924, 4.52; in 1923, 1.76; the average for the ten-year period being 8.02 per 1,000,000 tons of coal mined.

The number of tons mined per fatal accident in 1932 was 191,871 tons as compared with 341,518 tons for 1931. The average for the last ten years was 124,519 tons. Of the eight fatalities, 5 were caused by falls of roof and coal, and three by mine cars and haulage.

There were eleven fatal accidents in and about the metalliferous mines in 1932, being an increase of five over the figures for 1931. The ratio of fatal accidents was 4.83, compared with 2.61 in 1931. The ratio for the last ten-year period was 2.70. The tonnage mined per fatal accident was 457,175 for the last ten-year period.

Of the eleven fatalities, four were caused by falls of ground, two by gases following blasting, one each by falling chute and haulage and three were attributed to miscellaneous causes.

*Mine Safety and First Aid.*—The report reviews the activities of the four mine rescue stations. In addition to the regular teams in training, 39 new men took the full training and were granted certificates of competency.

Reference is made to the valuable work done by first aid and mine safety associations in the mining districts by carrying on classes of instruction, and also by the trained members of these associations in rendering first aid in actual accidents in mines.

In spite of the serious depression in the mining industry, it was reported that the mining companies and Safety Associations have kept up their interest and encouraged first-aid and mine-rescue demonstrations and competitions. Competitions were held at Cumberland, Nanaimo, Britannia, Princeton, Kimberley, and Fernie. Those taking part were miners from both coal and metal mines, quarrymen, and loggers. A number of ladies' teams entered the competitions and a large number of young people of school age and upwards took part. The work is actively supported by the management and officials of the different industries and members of the Inspection Branch of the Department of Mines, which also manifests its support in the shape of financial grants.

Mine air sampling was carried out as usual during the year, and 287 samples were collected in the various coal mines of the province.

In an article contributed to *The Nation* (New York), August 9, 1933, Louis Fisher, writing from Moscow on July 12, states that a recent edict has merged the Commissariat of Labour of the U.S.S.R. into the All-Soviet Trade Unions, so that control of the social insurance fund, the sanatoria, rest homes, all workers' medical services, and the protection of labour, passes from the hands of the government to the trade unions. "Thus, formally at least, the process by which, under socialism, the 'state' dies a slow death through attrition, has advanced another step."

## RECENT LABOUR UNION CONVENTIONS

### Ontario and Quebec Conference of Typographical Unions

At the twenty-second annual convention of the Ontario and Quebec Conference of Typographical Unions, which was held at Toronto on June 30 and July 1, 1933, delegates were present representing locals of Quebec, Montreal (English and French), Ottawa, Toronto, Hamilton, St. Catharines, London and Windsor, as well as the Women's Auxiliary of Toronto. Mr. A. W. Crawford, Deputy Minister of Labour of Ontario, welcomed the delegates on behalf of the provincial government, while the civic welcome was extended by Controller Ramsey, in the absence of the mayor. Mr. John Noble, vice-president of the Toronto Trades and Labour Council, Mr. E. Woollen, Toronto Allied Printing Trades Council, and Mr. W. R. Lucas, president of Typographical local union No. 91, extended to the delegates greetings on behalf of organized labour.

President Howard of the International Typographical Union recommended that all local union's form women's auxiliaries. He stressed the importance of women's help in using the economic strength of the members to establish fair conditions of labour. Touching on the unemployment situation, the president stated that millions of dollars had been spent by the local unions to help the unemployed. The purchasing power of the workers must, he said, be increased before any lasting improvement could be realized.

Mr. Tom Moore, president of the Trades and Labour Congress of Canada, reviewed some of the problems confronting the workers in Canada and stated that "there was no concrete improvement in the unemployment situation and that wage cutting and dismissals, which were still being resorted to, only aggravated the condition". The establishment of camps for single men was commended by President Moore, but he criticized the inadequate pay and lack of provision for these

workers to seek work elsewhere, and also, the alleged efforts to use camp labour in competition with other workers, thereby lessening the amount of employment for those who have dependants to support.

Resolutions were adopted making the following recommendations:

Changes in the tariff laws respecting the free entry of plates and mats;

Contributory unemployment insurance legislation;

Amendments to the Copyright Act;

More rigid enforcement of the health laws and Revenue Acts in respect to "bedroom printing plants";

Cessation of the practice of giving printing orders to brokers or salesmen, who without a proper knowledge of the trade, seek the cheapest printers regardless of the quality;

Reduction in the time allotted for advertising in radio broadcasts;

Acceptance of liquor advertising in Ontario publications;

Insertion of a minimum wage clause in all government printing contracts;

Wider use of Canadian-printed prize books in Quebec schools.

The apprentice competition again made a good showing and the work of the boys well up to standard.

The entertainment features included a luncheon and a tour of the *Toronto Star's* plant. A banquet was given by the local union and a bus drive by the city council.

Officers elected were: president, William Lodge, Ottawa; first vice-president, Francis Gauvin, Quebec; second vice-president, J. J. Clancey, London; vice-president apprentices, H. S. Bentley, Hamilton; secretary-treasurer, E. J. Teague, Montreal.

Ottawa was chosen as the convention city for 1934.

### Canadian Association of Stationary Engineers

The annual convention of the Canadian Association of Stationary Engineers was held in Woodstock, Ontario, June 30 and July 1, 1933, with President R. E. Arnup, presiding. The work of the association for the past year was reviewed by the president, while the reports presented showed the association to be in a sound financial condition and making progress.

The secretary was instructed to communicate with certain locals with a view of having

them re-join the national movement and to reply to letters from the Canadian Labour Defense League advising that the Association could not take any political action on their behalf.

On the following basis the convention adopted the principle of initiative, referendum and recall: "Three lodges or 5 per cent of membership shall be entitled to initiate any business that may properly come before Grand Lodge, the president being entitled to rule

such proposed changes in or out of order subject, of course, to an appeal from the chair in the form of a stated referendum, the referendum to be declared carried on a majority vote of lodges, such vote to be closed 30 days after making such referendum; members at large to vote individually on 15 days notice and be counted individually; the recall regarding any officer to be on the individual basis." Authority was given by the convention to grant charters to hoisting engineers, while the executive was empowered to create provincial executives in any province where three or more lodges existed.

Mr. Jordan, Inspector for the Board of Engineers of the Province of Ontario, informed the convention that there were fewer complaints in Ontario than elsewhere, and any

that were received were promptly attended to by the Department. He further intimated that the Engineering Board was willing at all times to aid in the promotion of the engineers' profession in the province.

Resolutions were adopted: (1) Favouring an 8-hour day and a 6-day week for all engineers with no reduction of pay and recommending united action to secure amendments to the Engineers' Act which would be beneficial to the Operating Engineers. Several changes were made in the constitution.

Officers elected were: President, F. Bowen, Windsor; Vice-President, F. Pflug, Kitchener; Secretary, Ed. Golightly, Toronto.

The 1934 convention of the association will be held in Windsor.

### American Federation of Musicians

The thirty-eighth annual convention of the American Federation of Musicians was held at Chicago on June 19-24, 1933, with 323 delegates present, President Joseph N. Weber, in the chair. The delegates were welcomed to the city on behalf of organized labour by John Fitzpatrick, president of the Chicago Federation of Labour. In the president's address conditions affecting not only the American Federation of Musicians but the labour movement as a whole was reviewed, as well as the steps taken by the United States Congress to alleviate the situation. Reference was made by the president to the setting up in Canada of a national movement in opposition to the American Federation of Labour. He characterized as ridiculous the assertion that Canadians must pay a special tax for the privilege of membership in the Federation and considered it merely as propaganda to weaken the labour movement in Canada. President Weber declared it to be the aim of the Federation to have a homogeneous organization of musicians in the English-speaking countries on the North American continent. In supplementing his address the president voiced the opposition of the organization against the use of army and marine bands in broadcasting programs.

According to the report of the secretary there are 684 locals in good standing, a loss of 19 as compared with the previous year.

The report of the treasurer showed an operating profit for the year of \$4,512.78, as compared with a deficit of \$35,211.03 for the previous year. The total membership was shown at 108,271, a loss of 10,093 during the year 1931-32. The report also showed that the Federation had invested \$14,456.25 in Canadian Bonds, and had on deposit in the Royal Bank of Canada, Montreal, the sum of \$72,702.05.

A resolution endorsing the Band Leaders' Bill which has for its object the commissioning of regular army and National Guard band leaders, was adopted by the convention. Some changes were made in the constitution and laws of the organization, while a number of resolutions were referred to the executive board for their consideration.

The following officers were re-elected for the ensuing year: President, Joseph N. Weber, 1440 Broadway, New York, N.Y.; Vice-president, Charles L. Bagley, 403 California Bldg., Los Angeles, Calif.; Secretary, William J. Kerngood, 37-39 William St., Newark, N.J.; Treasurer, H. E. Brenton, Box B., Astor Station, Boston, Mass. J. E. Jarrot, 1405 King St. W., Toronto, Ont., was re-elected a member of the executive committee.

The selection of a place of meeting for the 1934 convention was left to the executive to decide.

### The Provincial Federation of Ontario Fire Fighters

The fourteenth annual convention of the Provincial Federation of Ontario Fire Fighters, with approximately fifty delegates in attendance, was held at Ottawa, on June 14-16. Among those who extended a welcome to the visiting delegates were Controller S. Lewis,

Alderman Rod Plant, and Mr. Tom Moore, president of the Trades and Labour Congress of Canada. The addresses of welcome were replied to by President S. Shuttleworth, of Windsor, who presided during the various sessions. At the opening session Mr. G. J.

Richardson, secretary of the International Association of Fire Fighters, addressed the delegates.

According to the report of the committee on audit, total receipts, including the balance brought forward, amounted to \$5,734.72; expenditures totalled \$2,753.41, leaving a cash balance of \$2,981.31.

A lengthy discussion over the using of firemen for special constable duty in the city of Hamilton arose out of the presentation of the report of the board of directors, and terminated with the adopting of a resolution authorizing the executive committee to confer with the Attorney-General and request that firemen be used as special constables only when an emergency arises and that the duration of such duty should not exceed the period of thirty days.

The report of the secretary gave the result of the referendum vote, as ordered by the 1932 convention, on the subject of increasing the *per capita* tax from ten to fifteen cents per month. The proposition was defeated by a majority of 406 votes.

Resolutions were adopted recommending as follows: That the elected delegates and officers of the Federation be allowed sufficient time off duty, with full pay, to attend the annual conventions, such time not to be taken out of the holiday period; employment of a qualified projectionist for each projection machine; use of safety matches in all hospitals and similar institutions. The legislation committee was instructed to seek any legislation relating to working conditions in any matter that may come up requiring amendments in the interest of the organization and under the endorsement of the executive committee.

The officers, all of whom were re-elected, are: president, S. Shuttleworth, Windsor; first vice-president, H. R. Hobbs, Oshawa; second vice-president, D. Pitkeathly, Hamilton; secretary treasurer, D. H. Lamb, Toronto. Hamilton was selected as the convention city for 1934.

A banquet was held following the close of the convention at which Mr. Tom Moore, president of the Trades and Labour Congress of Canada, was the principal speaker.

## REDUCTIONS IN PERSONNEL IN DOMINION CIVIL SERVICE

THE following Order in Council was approved by the Governor General in Council on July 31, 1933:—

*P.C. 1-1561*

The Board had under consideration the following memorandum from the Right Honourable the Acting Minister of Finance:—

"The undersigned has the honour to report that the Government, in the budget speech delivered by the Minister of Finance on March 21, 1933, undertook to reduce controllable expenditures by \$14,000,000; that this decision was confirmed by Order in Council of March 31, 1933—P.C. 612; that, as over one-half of controllable expenditure is for salaries and wages, it is necessary to effect further economies in cost of personnel; and that it is desirable to make such reductions without disturbance of public services, and with the minimum of hardship to employees.

The undersigned accordingly recommends:—

1. That all employees of the Government who are now 65 years of age, or over, be retired from active duty from September 1, 1933, except where the Treasury Board, on a recommendation of the Minister of the Department concerned, approves of the continuance in the Public Service of any such employee on the ground: (a) that it is impossible to arrange that the duties of a position be carried on by re-arrangement of staff or other means, or (b) that the qualifications and experience of a person, employed in an administrative position, are such that the public interest will suffer if his services are terminated.

2. That such employees be granted leave for which they are eligible subsequent to that date,

separation being made effective from the expiration of such leave.

3. That such employees, who are contributors under the Civil Service Superannuation Act, or the Civil Service Superannuation and Retirement Act, be granted the benefits provided by those statutes.

4. That such permanent employees, not being contributors under either of the above statutes, or being contributors only under Part 11 of the Civil Service Superannuation and Retirement Act, be granted gratuities, or additional leave with pay, payable from the relevant vote, equal to one month's salary for each two years of continuous service, to a maximum of six months' salary."

The Board concur in the above report and recommendation, and submit the same for favourable consideration.

The Canadian Federation of Business and Professional Women's Clubs, at their annual convention, held at Hamilton, Ontario, in July, adopted a resolution strongly recommending the legalizing of a weekly half holiday for all workers, on the grounds both of efficiency and humanity. Another resolution urged that the Government be petitioned to modify the law with respect to the garnishee of the wages of unmarried persons. Under the present regulations a single person may suffer the loss of his entire wage nothing being allowed for living expenses.

## “BLANKET CODE” FOR ALL INDUSTRIES IN UNITED STATES

UNDER the authority of the National Industrial Recovery Act (LABOUR GAZETTE, July, 1933, page 691), President Roosevelt on July 20 approved a “blanket code” for employers of labour in the United States. Employers who sign the code enter into an agreement that during the period of the President's emergency re-employment drive, that is to say, from August 1 to December 31, 1933, or until the date of approval of a “code of fair competition” for their several industries, they will observe the conditions laid down in the “blanket code.”

In a communication sent out to five million employers throughout the country the President said:

“This agreement is part of a nation-wide plan to raise wages, create employment and thus increase purchasing power and restore business. That plan depends wholly on united action by all employers. For this reason I ask you, as an employer, to do your part by signing. If it turns out that the general agreement bears unfairly on any group of employers, they can have that straightened out by presenting their proposed code of fair competition.”

Employers accepting the “blanket code” agree to the following conditions:—

(1) After August 31, 1933, not to employ any person under 16 years of age, except that persons between 14 and 16 may be employed (but not in manufacturing or mechanical industries) for not to exceed three hours per day, and those hours between 7 a.m. and 7 p.m., in such work as will not interfere with hours of day school.

(2) Not to work any accounting, clerical, banking, office, service or sales employees (except outside salesmen) in any store, office, department, establishment or public utility, or on any automotive or horse-drawn passenger, express, delivery or freight service, or in any other place or manner, for more than forty hours in any one week and not to reduce the hours of any store or service operation to below fifty-two hours in any one week, unless such hours were less than fifty-two hours per week before July 1, 1933, and in the latter case not to reduce such hours at all.

(3) Not to employ any factory or mechanical worker or artisan more than a maximum week of thirty-five hours until December 31, 1933, but with the right to work a maximum week of forty hours for any six weeks within this period and not to employ any worker more than eight hours in any one day.

(4) The maximum hours fixed in the foregoing paragraphs (2) and (3) shall not apply to employees in establishments employing not more than two persons in towns of less than 2,500 population which towns are not part of a larger trade area; nor to registered pharmacists or other professional persons employed in their profession; nor to employees in a managerial or

executive capacity, who now receive more than \$35 per week; nor to employees on emergency maintenance and repair work; nor to very special cases where restrictions of hours of highly skilled workers on continuous processes would unavoidably reduce production, but, in any such special case, at least time and one-third shall be paid for hours worked in excess of the maximum. Population for the purposes of this agreement shall be determined by reference to the 1930 Federal census.

(5) Not to pay any of the classes of employees mentioned in paragraph (2) less than \$15 per week in any city of over 500,000 population or in the immediate trade area of such city, nor less than \$14.50 per week in any city of between 250,000 and 500,000 population, or in the immediate trade area of such city; nor less than \$14 per week in any city of between 2,500 and 250,000 population or in the immediate trade area of such city; and in towns of less than 2,500 population to increase all wages by not less than 20 per cent, provided that this shall not require wages in excess of \$12 per week.

(6) Not to pay any employee of the classes mentioned in paragraph (3) less than 40 cents per hour unless the hourly rate for the same class of work on July 15, 1929, was less than 40 cents per hour, in which latter case not to pay less than the hourly rate on July 15, 1929, and in no event less than 30 cents per hour. It is agreed that this paragraph establishes a guaranteed minimum rate of pay regardless of whether the employee is compensated on the basis of a time rate or on a piece-work performance.

(7) Not to reduce the compensation for employment now in excess of the minimum wages hereby agreed to (notwithstanding that the hours worked in such employment may be hereby reduced) and to increase the pay for such employment by an equitable readjustment of all pay schedules.

(8) Not to use any subterfuge to frustrate the spirit and intent of this agreement, which is, among other things, to increase employment by a universal covenant, to remove obstructions to commerce, and to shorten hours and to raise wages for the shorter week to a living wage basis.

(9) Not to increase the price of any merchandise sold after the date hereof over the price on July 1, 1933, by more than is made necessary by actual increases in production, replacement, or invoice costs of merchandise since July 1, 1933, or by taxes or other costs resulting from action taken pursuant to the Agricultural Adjustment Act, and, in setting such price increases, to give full weight to probable increases in sales volume and to refrain from taking profiteering advantage of the consuming public.

(10) To support and patronize establishments which also have signed this agreement and are listed as members of the N.R.A. (National Recovery Administration).

(11) To co-operate to the fullest extent in having a code of fair competition submitted by his industry at the earliest possible date and in any event before September 1, 1933.

(12) Where, before June 16, 1933, the undersigned had contracted to purchase goods at a fixed price for delivery during the period of

this agreement, the undersigned will make an appropriate adjustment of said fixed price to meet any increase in cost caused by the seller having signed this President's re-employment agreement or having become bound by any code of fair competition approved by the President.

(13) This agreement shall cease upon approval by the President of a code to which the undersigned is subject; or, if the N.R.A. so elects, upon submission of a code to which the undersigned is subject and substitution of any of its provisions for any of the terms of this agreement.

(14) It is agreed that any person who wishes to do his part in the President's re-employment drive by signing this agreement but who asserts

that some particular provision hereof, because of peculiar circumstances, will create great and unavoidable hardship, may obtain the benefits hereof by signing this agreement and putting it into effect and then, in a petition approved by a representative trade association of his industry, or other representative organization designated by N.R.A., may apply for a stay of such provision pending a summary investigation by N.R.A., if he agrees in such application to abide by the decision of such investigation. This agreement is entered into pursuant to Section 4 (a) of the National Industrial Recovery Act and subject to all the terms and conditions required by Sections 7 (a) and 10 (b) of that act.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Seventeenth Session of the International Labour Conference

THE Seventeenth Session of the International Labour Conference (League of Nations), constituted under the provisions of the Treaties of Peace, was held at Geneva, Switzerland, from June 8 to June 30, 1933. Sixteen previous sessions of the International Labour Conference have been held as follows: Washington, D.C., 1919 (LABOUR GAZETTE, December, 1919); Genoa, Italy, 1920 (LABOUR GAZETTE, October, 1920); Geneva, 1921 (LABOUR GAZETTE, January, 1922); Geneva, 1922 (LABOUR GAZETTE, December, 1922); Geneva, 1923, (LABOUR GAZETTE, December, 1923); Geneva, 1924 (LABOUR GAZETTE, August, 1924); Geneva, 1925 (LABOUR GAZETTE, July, 1925); Geneva, 1926 (8th and 9th Sessions) (LABOUR GAZETTE, July, 1926); Geneva, 1927 (LABOUR GAZETTE, July, 1927); Geneva, 1928 (LABOUR GAZETTE, July, 1928); Geneva, 1929 (LABOUR GAZETTE, July, 1929); Geneva, 1929 (LABOUR GAZETTE, December, 1929); Geneva, 1930 (LABOUR GAZETTE, July, 1930); Geneva, 1931 (LABOUR GAZETTE, July, 1931); and Geneva, 1932 (LABOUR GAZETTE, May, 1932).

The Treaty of Peace requires that "the meetings of the general conference of representatives of the members shall be held from time to time as occasion may require, and at least once in every year." It will be observed that two sessions of the conference were held in 1926 and also in 1929.

Each member state is entitled, under the terms of the Treaties of Peace, to send four delegates to the International Labour Conference, two of whom must be government delegates and the two others are to be delegates representing, respectively, the employers and the workpeople of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case

may be, in the respective countries. Each delegate may be accompanied by advisers not exceeding two in number for each item of the agenda.

The decisions of the Conference may take the form of either a Recommendation or a Draft Convention. A two-third majority of the votes cast by the delegates is required for the adoption of any Recommendation or Draft Convention by the Conference. The Recommendations and Draft Conventions are afterwards transmitted through the Secretariat of the League of Nations to the different countries represented in the International Labour Organization for acceptance or otherwise. Each country is obliged under the Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the Conference, to bring the respective Recommendation or Draft Conventions before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action.

In Canada, the provisions of the different Draft Conventions and Recommendations have been examined in all cases by the Law Officers of the Crown to determine whether the subject-matters were within federal or provincial jurisdiction, and they have thereupon been brought before the Dominion Parliament and the respective Provincial authorities, together with the law officers' reports on the subject of jurisdiction.

### Conference Agenda

The agenda of the seventeenth session of the Conference comprised five items as follows: (1) Abolition of fee-charging employ-

ment agencies (second discussion); (2) Invalidity, old age and widows' orphans' insurance (second discussion); (3) Unemployment insurance and various forms of relief for the unemployed; (4) Methods of providing rest and alternation of shifts in automatic sheet-glass works; and (5) Reduction of hours of work; report of the Tripartite Preparatory Conference.

### Decisions of the Conference

The following is a summary of the decisions of the Conference:

*Fee-Charging Employment Agencies.*—By 91 votes to 20, the Conference adopted a Draft Convention providing for the abolition within three years of fee-charging employment agencies conducted with a view to profit, and for the licensing and supervision of fee-charging agencies not conducted with a view to profit.

By 92 votes to 7, the Conference adopted a Recommendation concerning various matters subsidiary to the Convention, including the adaptation of free public employment agencies to the needs of occupations relying on fee-charging agencies.

*Social Insurance.*—By 106 votes to 5, the Conference adopted a Draft Convention concerning compulsory old-age insurance for persons employed in industrial or commercial undertakings, in the liberal professions, and for outworkers and domestic servants.

By 84 to 17, the Conference adopted a corresponding Draft Convention applying to persons employed in agricultural undertakings.

By 89 votes to 7, and by 75 votes to 18, the Conference adopted two similar Draft Conventions concerning invalidity insurance.

By 92 votes to 6, and by 73 votes to 18, the Conference adopted two further Draft Conventions concerning widows' and orphans' insurance.

By 72 votes to 20, the Conference adopted a Recommendation indicating certain general principles calculated to promote a just and effective organization of old-age, invalidity and widows' and orphans' insurance.

By 75 votes to 15, the Conference adopted a Resolution to the effect that the agenda of the 1934 Conference should include a first discussion on the maintenance of acquired rights and rights in course of acquisition, under invalidity, old-age and widows' and orphans' insurance, on behalf of workers who transfer their residence from one country to another.

*Unemployment Insurance.*—By 93 votes to 4, the Conference decided to place the question of unemployment insurance on the agenda of the 1934 Conference for second discussion. It adopted, after a first discussion, a number of points on which Governments should be consulted in the meantime.

*Rest and Shifts in Glass Works.*—By 94 votes to 24, the Conference decided to place on the agenda of the 1934 Conference, for second discussion, the question of methods of providing rest and alternation of shifts in automatic sheet-glass works. It adopted, after a first discussion, a number of points on which Governments should be consulted in the meantime.

*Hours of Work.*—By 99 votes to 24, the Conference decided to place on the agenda of the 1934 Conference, for second discussion, the question of the reduction of hours of work. Previously, it had decided by 95 votes to 26 that the question was suitable to form the subject of a Draft Convention or a Recommendation, and had adopted a number of points on which Governments should be consulted in preparation for next year's discussion.

By 77 votes to 17, the Conference adopted a Resolution requesting Governments and industrial bodies to suspend the working of overtime and other exceptions to the forty-eight-hour week or to reduce them to a strict minimum.

*Resolutions.*—Resolutions were adopted by the Conference as follows:—

(1) Requesting a study of the safety provisions for building workers with a view of this subject being placed on the agenda of an early session of the Conference;

(2) Requesting the placing on the agenda of a very early session of the Conference of the question of equality of treatment of national and foreign workers;

(3) Requesting the Governing Body to consider all steps likely to hasten the ratification of the Hours of Work (coal mines) Convention, 1931;

(4) Requesting the Governing Body to consider the desirability of placing on the agenda of an early session of the Conference the question of the organization and co-ordination of national and international public works, with a view of combating unemployment;

(5) Requesting the Governing Body to undertake all necessary steps with a view of placing German refugees in different countries in employment.

In addition to the foregoing resolutions, directed to the Governing Body of the International Labour Office, a resolution was also adopted unanimously for communication to the World's Monetary and Economic Conference in London, calling attention to the appalling prevalence of unemployment and indicating a number of measures which are urgently necessary if economic activity is to be resumed.

### Countries Represented

The number of States represented was forty-nine, only two fewer than the highest number ever attained. There were present three hundred and sixty-seven delegates and advisers in all; two countries—Turkey and Iraq—which had become members since the last session of the Conference being officially represented for the first time. A list of the countries represented follows: Albania, Argentine Republic; Australia; Austria; Belgium; Bolivia; Brazil; Bulgaria; Canada; Chile; China; Colombia; Cuba; Czechoslovakia; Denmark; Estonia; Finland; France; Germany; Great Britain; Guatemala; Greece; Hungary; India; Iraq; Irish Free State; Italy; Japan; Latvia; Liberia; Lithuania; Luxembourg; Mexico; Nicaragua; Norway; Netherlands; Persia; Poland; Portugal; Rumania; Siam; South Africa; Spain; Sweden; Switzerland; Turkey; Uruguay; Venezuela; Yugoslavia.

In addition, the United States of America, although not a Member of the International Labour Organization, was represented by a delegation of four observers as follows: Miss Mary Anderson, Director of the Women's Bureau, Department of Labour; Edwin S. Smith, Commissioner of Labour and Industries of Massachusetts, Boston, Mass.; William H. Stead, Secretary, Employment Stabilization Research Institute, University of Minnesota, Minneapolis, Minn.; and Hugh Frayne, American Federation of Labour.

This was the first occasion on which the United States had been represented at any of the sessions of the International Labour Conference since the first session which was held in Washington, D.C., in 1919.

Egypt also, though not a Member, was represented by two observers.

Both the American and Egyptian representatives participated in the proceedings of the Conference.

### Canadian Delegation

The Canadian delegation to the Conference comprised the following:—

#### *Government Delegates*—

Dr. W. A. Riddell, Canadian advisory officer, League of Nations, Geneva, Switzerland.

Mr. P. E. Renaud, secretary, office of the Canadian advisory officer, League of Nations, Geneva, Switzerland.

*Adviser to Government Delegates*.—Mr. Pierre Beaulé, President of the Federation of Catholic Workers of Canada, Quebec, P.Q.

*Employers' Delegates*.—Mr. A. R. Goldie, Galt, Ontario, chairman of the Industrial Relations Committee, Canadian Manufacturers' Association.

*Workers' Delegate*.—Mr. James Simpson, Toronto, Ontario, vice-president, Trades and Labour Congress of Canada.

### Officers of the Conference

The following were elected as officers of the Conference:—

President—His Excellency G. de Michelis, Italian Government Delegate.

Vice-Presidents—Mr. Creswell, Government Delegate (South Africa); Mr. Cort Van Der Linden, Employers' Delegate (Netherlands); and Mr. Hayday, Workers' Delegate (Great Britain).

Secretary-General.—Mr. Harold Butler, Director of the International Labour Office.

### Tribute to Albert Thomas and Opening Proceedings

The Conference opened with feeling tributes to the memory of Albert Thomas, first Director of the International Labour Office, whose death occurred within a few days after the close of the 1932 Session of the Conference.

Sir Atul Chatterjee, Government Delegate for India, presided as chairman of the Governing Body of the International Labour Office at the opening session of the Conference. In his opening remarks he observed that the prolonged economic depression, with all the unemployment and distress which it entailed, had laid greater responsibilities than ever on the International Labour Organization, and that under these circumstances the present Conference agenda comprised items of great complexity and importance.

Mr. de Michelis, on taking the chair as President of the Conference, stated that the Conference was confronted this year with the ruins piled up by one of the most serious world crises which history had recorded. There

was, however, a ray of hope on the horizon in the evident determination of the nations concerned to dominate events by the only possible means, that is to say, by sincere and energetic international collaboration. There was, he said, no economic and financial question before the world to-day which was not connected by a double link of both cause and effect with social and labour questions. Long and sad experience taught us that economic action derives from financial action and *vice versa*, and that both are in close relation with social action, forming a united system dependent on economic and social harmony. In conclusion, the President spoke of the importance of proper standards of living for the workers and of the proposal coming before the present Conference on the initiative of the Italian Government for a reduction of hours of work as a means of combating unemployment through the introduction of systematic short time on an international scale. If no action was taken towards the permanent reduction of hours of work, the tendency to increase production would, he said, result in the continuance of unemployment, and, what is worse, in leaving outside the scope of production the new generations of young persons capable of work who were growing up every year. Proper conditions would not be secured by the return of prosperity if, meanwhile, the employment of labour was not adapted to the new marketing and technical conditions. It was necessary on the one hand to enlarge markets, and on the other hand to regulate technical progress so as to absorb into production, with necessarily reduced hours of work, all those men who are capable of work and to set free aged workers, to return women to their families and adolescents to school.

#### Directors Annual Report

The annual report of the Director of the International Labour Office, a summary of which appeared in the June issue of the LABOUR GAZETTE pages 622-626, was discussed at several successive sittings of the Conference. Dr. W. A. Riddell, Canadian Government Delegate, congratulated Mr. Harold Butler, the new Director on the excellence of his report. The depression, he said, had clearly shown that a sound economic and financial basis is essential if social progress is not to be arrested. Canada, ranking as she does fifth among exporting countries, is deeply interested in every international effort which is being made to put the world back on the road to recovery. During recent months a great deal had been heard about the shortening of hours of work as a means for the relief of unemployment. In Canada, as in many other

countries, economic pressure had already resulted in a reduction of hours of work, employers and workers co-operating in the effort to distribute available work among as many workers as possible.

Dr. Riddell referred to the attention which has been given in some of the provincial legislatures of Canada to the shortening of hours of work, and mentioned that it was proposed to hold an inter-provincial conference in Canada next autumn on the subject. As one who had been present at all of the seventeen sessions of the International Labour Conference, it gave him great satisfaction to see the progress which the Organization was making in its task of reconciling material progress with social justice, which was one of the greatest importance to the peace and welfare of mankind. Dr. Riddell referred to legislation adopted at the recent session of the Canadian Parliament which would permit of the ratification of two more International Labour Conventions, namely the conventions concerning the Marking of Weights on Heavy Packages Transported by Vessels, and the Protection Against Accidents of Workers Employed in the Loading and Unloading of Ships.

Mr. James Simpson, Workers' Delegate for Canada, called attention to the growth of opinion among employers and workers in the United States and Canada with regard to the desirability of a reduction of hours of work. He regretted that the Conference had deferred the question for discussion at a future session. Both in industry and in agriculture, mechanization had taken enormous strides. The intensification of machine production was having a serious effect on the volume of employment, and was making a reduction of hours of work imperative.

Miss Mary Anderson, one of the United States representatives, referred to the movement for the shortening of hours of work, which was, she said, now receiving a great impetus in the United States owing to "the dislocation of our entire social organism which has resulted from production geared at a rate excessively out of balance with income for consumption". More than twenty states in her country had introduced bills for the reduction of hours, and several of these had become law. More far-reaching, however, than the action of the state legislatures were the efforts of the President and Congress to establish on a national scale a system by which employers and labour, each through their constituted representatives, might co-operate to establish a code of maximum hours and minimum wages. The speaker expressed her personal hope that the collaboration successfully instituted between the United States and

the International Labour Organization at this Conference would expand and grow.

Mr. Hugh Frayne, another of the United States' representatives, greeted the Conference on behalf of the American Federation of Labor. There were, he said, approximately 13,000,000 unemployed men and women in the United States. There were "sweat shops". There was child labour—a crime against humanity. But the people of the United States were hopeful; they believed that the new legislation passed recently relating to industry would bring better things, and that 4,000,000 workers would be put back into employment through the National Recovery Act by the beginning of October, and that the whole structure of the social and economic life of the country would be raised.

Mr. Butler, in bringing to a conclusion the debate on his annual report, dealt with the criticisms and suggestions which had been made by individual speakers. The persistence of the present depression had, he said, led a great many people, including a number of respectable economists, to the view that the competitive economic system, if left to itself, can never achieve the results which recent developments in men's power of production have entitled us to expect. The growth of conscious intervention and control in the economic life of every country—the beginning, in fact, of what is called "economic planning"—was the natural consequence of this conviction. Moreover, it was now becoming admitted that this control must begin in the financial sphere. The problem must be confronted of restoring a balance between increasing production and lagging consumption. This meant restoring the use of wealth now lying idle, which alone could enable the farmer to obtain a fair return for his labour and thus to become a good customer of industry, and which alone could enable the worker to produce what he is capable of producing and to obtain the equivalent remuneration. In some quarters we are told that all that has to be done is to restore confidence; but how can confidence be restored without positive action. Planned economy was no longer indeed a theory but a fact. Interference with competitive conditions had already gone so far that it will almost inevitably go further. Economic planning was taking many forms which may well differ from country to country and from industry to industry. It must not be assumed that the only form of planned economy is direct state management of industry, resulting in a glorified bureaucracy. Planning is by no means incompatible with the self-government of industry, and it may well be that the actual control will develop in this direction rather than in that of nation-

alization, and that the state would perform only "its natural task of removing obstacles, guiding and supervising."

The Director went on to speak of various questions relating to the present position of the International Labour Organization, and hoped that the collaboration of the United States in this work would continue and expand. Since his report to the Conference had been written, the number of ratifications of Conventions had risen from 502 to 566, due to the remarkable progress in ratifications made in South American countries and the acceptance by Spain of fourteen additional Conventions which brought the total number of her ratifications to thirty.

The Director discussed the status of oversea countries in the work of the International Labour Organization, and intimated that he hoped to visit South America as soon as he could.

The concluding part of his remarks dealt with technological unemployment, the need for public works as a means of unemployment relief, and the reduction of working hours. The question of hours he regarded as part of the whole question of industrial reconstruction and as a reform which is bound to come. The work of the International Labour Organization was linked up closely with the whole problem of economic recovery involving essentially international problems. We cannot stand still in the face of a world which is moving with great rapidity out of its old tracks into new and untried paths. We have got to play our part in that journey of discovery. Millions of people look to this Organization for help and guidance. As he had ventured to express in his annual report, the regulation of labour conditions is no longer so much a matter of protecting the worker against abuse as a part of the rational organization of society.

### Unemployment Insurance

Item three of the agenda "Unemployment insurance and various forms of relief for the unemployed" was referred for consideration to a committee which drew up a number of points on which it was suggested the International Labour Office should consult the various Governments with a view to the drafting of a Draft Convention and of a Recommendation for presentation at the next annual session of the Conference. The points on which the Governments will be consulted include the definition of unemployment; the benefits payable and the conditions attaching thereto; the contributions by public authorities, employers and workers; the treatment

of foreign workers; and the administrative organization. The report of the committee was adopted by the Conference without opposition.

### Reduction of Hours of Work

The proposal for international action looking to the reduction of working hours as the means of relieving unemployment was discussed at considerable length in the Conference. A decision was reached in the Conference by 95 votes to 26 that the question of the reduction of working hours was suitable to form the subject of a Draft Convention or Recommendation. The issue then arose whether this question should be dealt with under the usual procedure of the Conference—that is, by a double discussion, the first stage being a preliminary consideration of the matter this year with a view to the consultation of governments on specified points, and the second stage being the adoption a year later of Conventions or Recommendations—or whether an exceptional urgency procedure should be followed in order to arrive at a Convention this year. The latter alternative was preferred by those who regard a reduction of hours of work as an emergency measure, possibly to be limited to the duration of the crisis but in any case to be applied as speedily as possible. The Conference, however, decided by 69 votes to 55 against the adoption of an exceptional procedure, and resolved by 86 votes to 22 to deal with the subject under the customary double-discussion rules, treating it as a question placed on its agenda under normal conditions. This decision responds to the desire, which was expressed by a certain number of governments, that the problem of a reduction of hours of work should be further investigated, not only from the point of view of its bearing on the present depression, but also—and chiefly—from the point of view of the profound changes which technical progress is making in the organization of industry and which are of a permanent, not a transitory nature.

In participating in this debate Mr. Goldie, employers' delegate, Canada, stated that speaking on behalf of the employers of Canada, he was not in favour of the proposal and that he did not think it would accomplish the objects intended. As regards Canada, he did not think it would reduce unemployment for the following reasons.

(1) It would increase the costs of production which would have as a result decreased sales and therefore less work for the producers.

(2) Many, if not most, of the factories are, through lack of orders, at present working less

than forty hours per week, and would therefore be unable to take on any more workers at the present time.

(3) If those factories fortunate enough to have orders which require them to operate more than forty hours per week were compelled to reduce the hours of individual workers, the result would be either spreading the work over more workers by some system of shifts, in which case the total purchasing power of the workers in those factories would not be increased; or, if weekly wages had to be maintained, the costs of production would go up and the stream of orders would tend to diminish, particularly if the factories were in competition with the products of countries where wages are lower and conditions poorer.

(4) The world is in a state of turmoil. No one really knows what is the matter nor what is the cure. This would therefore appear to be an inopportune time to burden industry with compulsory regulations the result of which can be seen only too clearly by those in the industries.

(5) It would not create more work, which is what the factories need. They are unemployed in exactly the same way as the workers are unemployed. The workers are idle through no fault of their own, and the factories, in the same way, are idle in general through no fault of theirs. The cure for this condition of things does seem to be in hands other than those of either worker or employer. What the unemployed plant wants is work just as much as the unemployed worker.

The conclusions reached by a Committee of the Conference as to the points on which the different governments should be consulted by questionnaire were adopted in the Conference without dissent. The answers received to this questionnaire will be utilized in the drafting of a Convention for submission to the Conference next year.

### Withdrawal of German Delegation

On June 19th, it was announced that the German Delegation in attendance at the Conference considered itself under the obligation of withdrawing from the Conference on account of alleged offensive remarks directed against Germany and its delegates which had been made at a sitting of the Workers' Group, and which were regarded as an affront to the German delegation as a whole. The German delegation thereupon withdrew. The officers of the Conference, meeting at the request of the President, issued a statement indicating that the alleged offensive remarks in question had not been made at any sitting of the Conference or of its committees, but at a

meeting of the Workers' Group, and that furthermore the authorities of the Conference had nothing to do with the respective groups when meeting unofficially.

### Closing Speeches

The President in bringing the Conference to a close observed that "perhaps one means of securing complete and general protection for the workers would be to define and render obligatory by means of international Conventions the principles to which collective agreements should conform. There was a certain rivalry between the method of labour legislation and that of collective agreements, and the latter system seemed likely to prevail. Legislation must, however, intervene in order to make the rules laid down by collective agreements general and obligatory, and to provide the necessary bodies to supervise their application and settle possible dispute. In order to carry out such a program, international standards were necessary, and it was therefore most desirable that the International Labour Office should concern itself actively with the question." A new body should be set up in

connection with the International Labour Office in which economists and authorized representatives of the various countries would study labour questions in their relation to economic questions and *vice versa*.

Mr. Harold Butler, Director of the International Labour Office, pointed out that the Conference had adopted seven Conventions, six of which put the coping stone on the edifice of international standards of social insurance which the Organization began to erect in 1925. The fact that these Conventions had been adopted practically unanimously was striking proof of the value now attached by Governments, employers and workers alike to social insurance as a feature of the modern system. If the world was to emerge from the present crisis and recover something of its old prosperity, a great deal of industrial reconstruction would have to be done in which the economic and social elements must be held in their right equilibrium. The part which the International Labour Organization is destined to play in that reconstruction is one of the principal tasks at present before it.

### DRAFT CONVENTION CONCERNING FEE-CHARGING EMPLOYMENT AGENCIES

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Seventeenth Session on June 8, 1933, and

Having decided upon the adoption of certain proposals with regard to fee-charging employment agencies, which is the first item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a Draft International Convention,

adopts, this 30th day of June of the year one thousand nine hundred and thirty-three, the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

#### Article 1

1. For the purpose of this Convention the expression "fee-charging employment agency" means:

- (a) employment agencies conducted with a view to profit, that is to say, any person, company, institution, agency or other organization which acts as an intermediary for the purpose of procuring employment for a worker or supplying a worker for an employer with a view to deriving either directly or indirectly any pecuniary or other material advantage from either employer or worker; the

expression does not include newspapers or other publications unless they are published wholly or mainly for the purpose of acting as intermediaries between employers and workers;

- (b) employment agencies not conducted with a view to profit, that is to say, any company, institution, agency or other organization which, though not conducted with a view to deriving any pecuniary or other material advantage levies from either employer or worker for its placing services an entrance fee, a periodical contribution or any other charge.
2. This Convention does not apply to the placing of seamen.

#### Article 2

1. Fee-charging employment agencies conducted with a view to profit as defined in paragraph 1 (a) of the preceding Article shall be abolished within three years from the coming into force of this Convention for the Member concerned.

2. During the period preceding abolition:

- (a) there shall not be established any new fee-charging employment agency conducted with a view to profit;
- (b) fee-charging employment agencies conducted with a view to profit shall be subject to the supervision of the competent authority and shall only charge fees and expenses on a scale approved by the said authority.

#### Article 3

1. Exceptions to the provisions of paragraph 1 of Article 2 of this Convention may be allowed by the competent authority in exceptional cases,

but only after consultation of the organizations of employers and workers concerned.

2. Exceptions may only be allowed in virtue of this Article for agencies catering for categories of workers exactly defined by national laws or regulations, and belonging to occupations placing for which is carried on under special conditions justifying such an exception.

3. The establishment of new fee-charging employment agencies shall not be allowed, in virtue of this Article, after the expiration of the period of three years referred to in Article 2, save in exceptional cases when necessary to meet special requirements.

4. Every fee-charging employment agency for which an exception is allowed under this Article:

- (a) shall be subject to the supervision of the competent authority;
- (b) shall be required to be in possession of a yearly licence renewable at the discretion of the competent authority during a period which shall not exceed ten years, provided that a licence issued to an individual before the ratification of this Convention may be renewed until the death of the licensee;
- (c) shall only charge fees and expenses on a scale approved by the competent authority; and
- (d) shall only place or recruit workers abroad if authorized so to do by its licence and if its operations are conducted under an agreement between the countries concerned.

#### Article 4

Free-charging employment agencies not conducted with a view to profit as defined in paragraph 1 (b) of Article 1:

- (a) shall be required to have an authorisation from the competent authority and shall be subject to the supervision of the said authority;
- (b) shall not make any charge in excess of the scale of charges fixed by the competent authority with strict regard to the expenses incurred; and
- (c) shall only place or recruit workers abroad if permitted so to do by the competent authority, and if their operations are conducted under an agreement between the countries concerned.

#### Article 5

Fee-charging employment agencies as defined in Article 1 of this Convention and every person, company, institution, agency or other private organization habitually engaging in placing shall, even though making no charge make a declaration to the competent authority stating whether their placing services are given gratuitously or for remuneration.

#### Article 6

National laws or regulations shall prescribe appropriate penalties, including the withdrawal when necessary of the licences and authorizations provided for by this Convention, for any violation of the above Articles or of any laws or regulations giving effect to them.

#### Article 7

There shall be included in the annual reports to be submitted under Article 408 of the

Treaty of Versailles and the corresponding Articles of the other Treaties of Peace all necessary information concerning the exceptions allowed under Article 3.

#### Article 8

The formal ratification of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

#### Article 9

This Convention shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

It shall come into force twelve months after the date on which the ratifications of two Members of the International Labour Organization have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

#### Article 10

As soon as the ratifications of two Members of the International Labour Organisation have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organisation. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organisation.

#### Article 11

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of ten years and, thereafter, may denounce this Convention at the expiration of each period of ten years under the terms provided for in this Article.

#### Article 12

At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

#### Article 13

Should the Conference adopt a new Convention revising this Convention in whole or in part, then, unless the new Convention otherwise provides:

(a) the ratification by a Member of the new revising Convention shall *ipso jure*, involve the immediate denunciation of this Convention, notwithstanding the provisions of Article 11 above, if and when the new revising Convention shall have come into force.

(b) as from the date when the new revising Convention comes into force this Con-

vention shall cease to be open to ratification by the Members.

This Convention shall in any case remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

#### Article 14

The French and English texts of this Convention shall both be authentic.

### RECOMMENDATION CONCERNING EMPLOYMENT AGENCIES

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Seventeenth Session on 8 June, 1933, and

Having decided upon the adoption of certain proposals with regard to the abolition of fee-charging employment agencies, which is the first item on the Agenda of the Session, and

Having determined that these proposals should take the form of a Recommendation,

adopts, this 30th day of June of the year one thousand nine hundred and thirty-three, the following Recommendation, to be submitted to the Members of the International Labour Organisation for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

The Conference,

Having adopted a Draft Convention concerning fee-charging employment agencies intended to supplement the provisions of the Convention and Recommendation concerning unemployment which it adopted at its First Session;

Considering it to be desirable to ensure within as short a time as possible the complete abolition of fee-charging employment agencies conducted with a view to profit;

Considering that for certain occupations, the abolition of such agencies may nevertheless involve certain difficulties in countries in which

the free public employment offices are not in a position completely to take the place of the agencies abolished;

Considering that features other than placing fees may give a profit-making character to placing operations and may lead to abuses;

Recommends the Members to take the following rules and methods into consideration:

#### I.

1. Measures should be taken to adapt the free public employment offices to the needs of the occupations in which recourse is often had to the services of fee-charging employment agencies.

2. The principle of having specialized public employment offices for particular occupations should be applied and in so far as possible persons familiar with the characteristics, usages, and customs of the occupations concerned should be attached to such offices.

3. Representatives of the organizations most representative of workers and employers in the occupations concerned should be invited to collaborate in the working of the public employment offices.

#### II.

1. Persons and undertakings which either directly or through any intermediary derive any profit from certain activities such as the keeping of public houses, hotels, secondhand clothes shops, pawn shops, or money-changing should be forbidden to engage in placing.

2. Placing operations should be prohibited on all premises or in all outhouses and annexes of such premises where any of the above-mentioned trades are carried on.

### DRAFT CONVENTION CONCERNING COMPULSORY OLD-AGE INSURANCE FOR PERSONS EMPLOYED IN INDUSTRIAL OR COMMERCIAL UNDERTAKINGS, IN THE LIBERAL PROFESSIONS, AND FOR OUTWORKERS AND DOMESTIC SERVANTS

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Seventeenth Session on June 8, 1933, and

Having decided upon the adoption of certain proposals with regard to compulsory old-age insurance which is included in the second item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention,

adopts, this 30th day of June of the year one thousand nine hundred and thirty-three, the

following Draft Convention for ratification by the Members of the International Labour Organisation, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

#### Article 1

Each Member of the International Labour Organisation which ratifies this Convention undertakes to set up or maintain a scheme of compulsory old-age insurance which shall be based on provisions at least equivalent to those contained in this Convention.

#### Article 2

1. The compulsory old-age insurance scheme shall apply to manual and non-manual workers,

including apprentices, employed in industrial or commercial undertakings or in the liberal professions, and to out-workers and domestic servants.

2. Provided that any Member may in its national laws or regulations make such exceptions as it deems necessary in respect of:

- (a) workers whose remuneration exceeds a prescribed amount, and, where national laws or regulations do not make this exception general in its application, any non-manual workers engaged in occupations which are ordinarily considered as liberal professions;
- (b) workers who are not paid a money wage;
- (c) young workers under a prescribed age and workers too old to become insured when they first enter employment;
- (d) out-workers whose conditions of work are not of a like nature to those of ordinary wage earners;
- (e) members of the employer's family;
- (f) workers whose employment is of such a nature that, its total duration being necessarily short, they cannot qualify for benefit, and persons engaged solely in occasional or subsidiary employment;
- (g) invalid workers and workers in receipt of an invalidity or old-age pension;
- (h) retired public officials employed for remuneration and persons possessing a private income, where the retirement pension or private income is at least equal to the old-age pension provided by national laws or regulations;
- (i) workers who, during their studies, give lessons, or work for remuneration in preparation for an occupation corresponding to such studies;
- (j) domestic servants employed in the households of agricultural employers.

3. Provided also that there may be exempted from liability to insurance persons who by virtue of any law, regulations or special scheme, are or will become entitled to old-age benefits at least equivalent on the whole to those provided for in this Convention.

4. This Convention does not apply to seamen and sea fishermen.

#### Article 3

National laws or regulations shall, under conditions to be determined by them, either entitle persons formerly compulsorily insured who have not attained the pensionable age to continue their insurance voluntarily or entitle such persons to maintain their rights, by the periodical payment of a fee for the purpose, unless the said rights are automatically maintained, or in the case of married women, the husband, if not liable to compulsory insurance, is permitted to insure voluntarily and thereby to qualify his wife for an old-age or widow's pension.

#### Article 4

An insured person shall be entitled to an old-age pension at an age which shall be determined by national laws or regulations but which, in the case of insurance schemes for employed persons, shall not exceed sixty-five.

#### Article 5

The right to a pension may be made conditional upon the completion of a qualifying

period, which may involve the payment of a minimum number of contributions since entry into insurance and during a prescribed period immediately preceding the happening of the event insured against.

#### Article 6

1. An insured person who ceases to be liable to insurance without being entitled to a benefit representing a return for the contributions credited to his account shall retain his rights in respect of these contributions:

2. Provided that national laws or regulations may terminate rights in respect of contributions on the expiry of a term which shall be reckoned from the date when the insured person so ceased to be liable to insurance and which shall be either variable or fixed:

- (a) where the term is variable, it shall not be less than one-third (less the periods for which contributions have not been credited) of the total of the periods for which contributions have been credited since entry into insurance;
- (b) where the term is fixed, it shall in no case be less than eighteen months and rights in respect of contributions may be terminated on the expiry of the term, unless, in the course thereof, a minimum number of contributions, prescribed by national laws or regulations, has been credited to the account of the insured person in virtue of either compulsory or voluntarily continued insurance.

#### Article 7

1. The pension shall, whether or not dependent on the time spent in insurance, be a fixed sum or a percentage of the remuneration taken into account for insurance purposes, or vary with the amount of the contributions paid.

2. Where the pension varies with the time spent in insurance, and its award is made conditional upon the completion by the insured person of a qualifying period, the pension shall, unless a minimum rate is guaranteed, include a fixed sum or fixed portion not dependent on the time spent in insurance; where the pension is awarded without any condition as to the completion of a qualifying period, provision may be made for a guaranteed minimum rate of pension.

3. Where contributions are graduated according to remuneration, the remuneration taken into account for this purpose shall also be taken into account for the purpose of computing the pension, whether or not the pension varies with the time spent in insurance.

#### Article 8

1. The right to benefits may be forfeited or suspended in whole or in part if the person concerned has acted fraudulently towards the insurance institution.

2. The pension may be suspended in whole or in part while the person concerned

- (a) is in employment involving compulsory insurance;
- (b) is entirely maintained at the public expense; or
- (c) is in receipt of another periodical cash benefit payable by virtue of any law or regulations concerning compulsory social insurance, pensions, or workmen's compensation for accidents or occupational diseases.

*Article 9*

1. The insured persons and their employers shall contribute to the financial resources of the insurance scheme.

2. National laws or regulations may exempt from liability to pay contributions:

- (a) apprentices and young workers under a prescribed age;
- (b) workers who are not paid a money wage or whose wages are very low.

3. Contributions from employers may be dispensed with under laws or regulations concerning schemes of national insurance not restricted in scope to employed persons.

4. The public authorities shall contribute to the financial resources or to the benefits of insurance schemes covering employed persons in general or manual workers.

5. National laws or regulations which, at the time of the adoption of this Convention, do not require contributions from insured persons, may continue not to require such contributions.

*Article 10*

1. The insurance scheme shall be administered by institutions founded by the public authorities and not conducted with a view to profit, or by State insurance funds.

2. Provided that national laws or regulations may also entrust its administration to institutions founded on the initiative of the parties concerned or of their organizations and duly approved by the public authorities.

3. The funds of insurance institutions and State insurance funds shall be administered separately from the public funds.

4. Representatives of the insured persons shall participate in the management of insurance institutions under conditions to be determined by national laws or regulations, which may likewise decide as to the participation of representatives of employers and of the public authorities.

5. Self-governing insurance institutions shall be under the administrative and financial supervision of the public authorities.

*Article 11*

1. The insured person or his legal representatives shall have a right of appeal in any dispute concerning benefits.

2. Such disputes shall be referred to special tribunals which shall include judges, whether professional or not, who are specially cognisant of the purposes of insurance and the needs of insured persons or are assisted by assessors chosen as representative of insured persons and employers respectively.

3. In any dispute concerning liability to insurance or the rate of contribution, the employed person and, in the case of schemes providing for an employer's contribution, his employer shall have a right of appeal.

*Article 12*

1. Foreign employed persons shall be liable to insurance and to the payment of contributions under the same conditions as nationals.

2. Foreign insured persons and their dependants shall be entitled under the same conditions as nationals to the benefits derived from the contributions credited to their account.

3. Foreign insured persons and their dependants shall, if nationals of a Member

which is bound by this Convention and the laws or regulation of which therefore provide for a State subsidy towards the financial resources or benefits of the insurance scheme in conformity with Article 9, also be entitled to any subsidy or supplement to or fraction of a pension which is payable out of public funds.

4. Provided that national laws or regulations may restrict to nationals the right to any subsidy or supplement to or fraction of a pension which is payable out of public funds and granted solely to insured persons who have exceeded a prescribed age at the date when the laws or regulations providing for compulsory insurance come into force.

5. Any restrictions which may apply in the event of residence abroad shall only apply to pensioners and their dependants who are nationals of any Member bound by this Convention and reside in the territory of any Member bound thereby to the extent to which they apply to nationals of the country in which the pension has been acquired: Provided that any subsidy or supplement to or fraction of a pension which is payable out of public funds may be withheld.

*Article 13*

1. The insurance of employed persons shall be governed by the law applicable at their place of employment.

2. In the interest of continuity of insurance exceptions may be made to this rule by agreement between the Members concerned.

*Article 14*

Any Member may prescribe special provisions for frontier workers whose place of employment is in its territory and whose place of residence is abroad.

*Article 15*

In countries which, at the time when this Convention first comes into force, have no laws or regulations providing for compulsory old-age insurance, an existing non-contributory pension scheme which guarantees an individual right to a pension under the conditions defined in Articles 16 to 22 hereinafter shall be deemed to satisfy the requirements of this Convention.

*Article 16*

Pensions shall be awarded at an age which shall be determined by national laws or regulations but which shall not exceed sixty-five.

*Article 17*

The right to a pension may be made conditional upon the claimant's having been resident in the territory of the Member for a period immediately preceding the making of the claim. This period shall be determined by national laws or regulations but shall not exceed ten years.

*Article 18*

1. A claimant shall be entitled to a pension if the annual value of his means does not exceed a limit which shall be fixed by national laws or regulations with due regard to the minimum cost of living.

2. Means up to a level which shall be determined by national laws or regulations.

shall be exempted for the purpose of the assessment of means.

*Article 19*

The rate of pension shall be an amount which, together with any means of the claimant in excess of the means exempted, is at least sufficient to cover the essential needs of the pensioner.

*Article 20*

1. A claimant shall have a right of appeal in any dispute concerning the award of a pension or the rate thereof.

2. The appeal shall lie to an authority other than the authority which gave the decision in the first instance.

*Article 21*

1. Foreigners who are nationals of a Member bound by this Convention shall be entitled to pensions under the same conditions as nationals.

2. Provided that national laws or regulations may make the award of a pension to foreigners conditional upon their having been resident in the territory of the Member for a period which shall not exceed by more than five years the period of residence prescribed for nationals.

*Article 22*

1. The right to a pension may be forfeited or suspended in whole or in part if the person concerned:

- (a) has been sentenced to imprisonment for a criminal offence;
- (b) has obtained or attempted to obtain a pension by fraud;
- (c) has persistently refused to earn his living by work compatible with his strength and capacity.

2. The pension may be suspended in whole or in part while the person concerned is entirely maintained at the public expense.

*Article 23*

Subject to the provisions of paragraph 5 of Article 12, this Convention does not refer to the maintenance of pension rights in the event of residence abroad.

*Article 24*

The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

*Article 25*

This Convention shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

It shall come into force twelve months after the date on which the ratifications of two Members of the International Labour Organization have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

*Article 26.*

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

*Article 27.*

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of ten years and, thereafter, may denounce this Convention at the expiration of each period of ten years under the terms provided for in this Article.

*Article 28.*

At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

*Article 29.*

Should the Conference adopt a new Convention revising this Convention in whole or in part, then, unless the new Convention otherwise provides:

- (a) the ratification by a Member of the new revising Convention shall, *ipso jure*, involve the immediate denunciation of this Convention, notwithstanding the provisions of Article 27 above, if and when the new revising Convention shall have come into force;
- (b) as from the date when the new revising Convention comes into force, this Convention shall cease to be open to ratification by the Members.

This Convention shall in any case remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

*Article 30.*

The French and English texts of this Convention shall both be authentic.

## DRAFT CONVENTION CONCERNING COMPULSORY OLD-AGE INSURANCE FOR PERSONS EMPLOYED IN AGRICULTURAL UNDERTAKINGS

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Seventeenth Session on 8 June, 1933, and

Having decided upon the adoption of certain proposals with regard to compulsory old-age insurance, which is included in the second item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a Draft International Convention,

adopts, this 30th day of June of the year one thousand nine hundred and thirty-three, the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

### Article 1

Each Member of the International Labour Organization which ratifies this Convention undertakes to set up or maintain a scheme of compulsory old-age insurance which shall be based on provisions at least equivalent to those contained in this Convention.

### Article 2.

1. The compulsory old-age insurance scheme shall apply to manual and non-manual workers, including apprentices, employed in agricultural undertakings, and to domestic servants employed in the households of agricultural employers.

2. Provided that any Member may in its national laws or regulations make such exceptions as it deems necessary in respect of:

- (a) workers whose remuneration exceeds a prescribed amount, and, where national laws or regulations do not make this exception general in its application, any non-manual workers engaged in occupations which are ordinarily considered as liberal professions;
- (b) workers who are not paid a money wage;
- (c) young workers under a prescribed age and workers too old to become insured when they first enter employment;
- (d) out workers whose conditions of work are not of a like nature to those of ordinary wage earners;
- (e) members of the employers' family;
- (f) workers whose employment is of such a nature that, its total duration being necessarily short, they cannot qualify for benefit, and persons engaged solely in occasional or subsidiary employment;
- (g) invalid workers and workers in receipt of an invalidity or old-age pension;
- (h) retired public officials employed for remuneration and persons possessing a private income, where the retirement pension or private income is at least equal to the old-age pension provided by national laws or regulations;
- (i) workers who, during their studies, give lessons, or work for remuneration in preparation for an occupation corresponding to such studies.

3. Provided also that there may be exempted from liability to insurance persons who, by virtue of any law, regulations or special scheme, are or will become entitled to old-age benefit at least equivalent on the whole to those provided for in this Convention.

### Article 3

National laws or regulations shall, under conditions to be determined by them, either entitle persons formerly compulsorily insured who have not attained the pensionable age to continue their insurance voluntarily or entitle such persons to maintain their rights by the periodical payment of a fee for the purpose, unless the said rights are automatically maintained, or, in the case of married women, the husband, if not liable to compulsory insurance, is permitted to insure voluntarily and thereby to qualify his wife for an old-age or widow's pension.

### Article 4

An insured person shall be entitled to an old-age pension at an age which shall be determined by national laws or regulations, but which, in the case of insurance schemes for employed persons, shall not exceed sixty-five.

### Article 5

The right to a pension may be made conditional upon the completion of a qualifying period, which may involve the payment of a minimum number of contributions since entry into insurance and during a prescribed period immediately preceding the happening of the event insured against.

### Article 6

1. An insured person who ceases to be liable to insurance without being entitled to a benefit representing a return for the contributions credited to his account shall retain his rights in respect of these contributions.

2. Provided that national laws or regulations may terminate rights in respect of contributions on the expiry of a term which shall be reckoned from the date when the insured person so ceased to be liable to insurance and which shall be either variable or fixed:

- (a) where the term is variable, it shall not be less than one-third (less the periods for which contributions have not been credited) of the total of the periods for which contributions have been credited since entry into insurance;
- (b) where the term is fixed, it shall in no case be less than eighteen months and rights in respect of contributions may be terminated on the expiry of the term, unless, in the course thereof, a minimum number of contributions prescribed by national laws or regulations has been credited to the account of the insured person in virtue of either compulsory or voluntarily continued insurance.

### Article 7

1. The pension shall, whether or not dependent on the time spent in insurance, be a fixed sum or a percentage of the remuneration taken into account for insurance purposes, or vary with the amount of the contributions paid.

2. Where the pension varies with the time spent in insurance, and its award is made conditional upon the completion by the insured person of a qualifying period, the pension shall, unless a minimum rate is guaranteed, include a fixed sum or fixed portion not dependent on the time spent in insurance; where the pension is awarded without any condition as to the completion of a qualifying period, provision may be made for a guaranteed minimum rate of pension.

3. Where contributions are graduated according to remuneration, the remuneration taken into account for this purpose shall also be taken into account for the purpose of computing the pension, whether or not the pension varies with the time spent in insurance.

#### Article 8

1. The right to benefits may be forfeited or suspended in whole or in part if the person concerned has acted fraudulently towards the insurance institution.

2. The pension may be suspended in whole or in part while the person concerned:

- (a) is in employment involving compulsory insurance;
- (b) is entirely maintained at the public expense; or
- (c) is in receipt of another periodical cash benefit payable by virtue of any law or regulations concerning compulsory social insurance, pensions, or workmen's compensation for accidents or occupational diseases.

#### Article 9

1. The insured persons and their employers shall contribute to the financial resources of the insurance scheme.

2. National laws or regulations may exempt from liability to pay contributions:

- (a) apprentices and young workers under a prescribed age;
- (b) workers who are not paid a money wage or whose wages are very low.
- (c) workers in the service of an employer who pays contributions assessed on a basis which is not dependent on the number of workers employed.

3. Contributions from employers may be dispensed with under laws or regulations concerning schemes of national insurance not restricted in scope to employed persons.

4. The public authorities shall contribute to the financial resources or to the benefit of insurance schemes covering employed persons in general or of manual workers.

5. National laws or regulations which, at the time of the adoption of this Convention, do not require contributions from insured persons may continue not to require such contributions.

#### Article 10

1. The insurance scheme shall be administered by institutions founded by the public authorities and not conducted with a view to profit, or by State insurance funds.

2. Provided that national laws or regulations may also entrust its administration to institutions founded on the initiative of the parties concerned or of their organizations and duly approved by the public authorities.

66942—4

3. The funds of insurance institutions and State insurance funds shall be administered separately from the public funds.

4. Representatives of the insured persons shall participate in the management of insurance institutions under conditions to be determined by national laws or regulations, which may likewise decide as to the participation of representatives of employers and of the public authorities.

5. Self-governing insurance institutions shall be under the administrative and financial supervision of the public authorities.

#### Article 11

1. The insured person or his legal representatives shall have a right of appeal in any dispute concerning benefits.

2. Such disputes shall be referred to special tribunals which shall include judges, whether professional or not, who are specially cognizant of the purposes of insurance and the needs of insured persons or are assisted by assessors chosen as representative of insured persons and employers respectively.

3. In any dispute concerning liability to insurance or the rate of contribution, the employed person and, in the case of schemes providing for an employer's contribution, his employer shall have a right of appeal.

#### Article 12

1. Foreign employed persons shall be liable to insurance and to the payment of contributions under the same conditions as nationals.

2. Foreign insured persons and their dependants shall be entitled under the same conditions as nationals to the benefits derived from the contributions credited to their account.

3. Foreign insured persons and their dependants shall, if nationals of a Member which is bound by this Convention and the laws or regulations of which therefore provide for a State subsidy towards the financial resources or benefits of the insurance scheme in conformity with Article 9, also be entitled to any subsidy or supplement to or fraction of a pension which is payable out of public funds.

4. Provided that national laws or regulations may restrict to nationals the right to any subsidy or supplement to or fraction of a pension which is payable out of public funds and granted solely to insured persons who have exceeded a prescribed age at the date when the laws or regulations providing for compulsory insurance come into force.

5. Any restrictions which may apply in the event of residence abroad shall only apply to pensioners and their dependants who are nationals of any Member bound by this Convention and reside in the territory of any Member bound thereby to the extent to which they apply to nationals of the country in which the pension has been acquired. Provided that any subsidy or supplement to or fraction of a pension which is payable out of public funds may be withheld.

#### Article 13

1. The insurance of employed persons shall be governed by the law applicable at their place of employment.

2. In the interest of continuity of insurance, exceptions may be made to this rule by agreement between the Members concerned.

*Article 14*

Any Member may prescribe special provisions for frontier workers whose place of employment is in its territory and whose place of residence is abroad.

*Article 15*

In countries which, at the time when this Convention first comes into force, have no laws or regulations providing for compulsory old-age insurance, an existing non-contributory pension scheme which guarantees an individual right to a pension under the conditions defined in Articles 16 to 22 hereinafter shall be deemed to satisfy the requirements of this Convention.

*Article 16*

Pensions shall be awarded at an age which shall be determined by national laws or regulations, but which shall not exceed sixty-five.

*Article 17*

The right to a pension may be made conditional upon the claimant's having been resident in the territory of the Member for a period immediately preceding the making of the claim. This period shall be determined by national laws or regulations, but shall not exceed ten years.

*Article 18*

1. A claimant shall be entitled to a pension if the annual value of his means does not exceed a limit which shall be fixed by national laws or regulations with due regard to the minimum cost of living.

2. Means up to a level which shall be determined by national laws or regulations shall be exempted for the purpose of the assessment of means.

*Article 19*

The rate of pension shall be an amount which, together with any means of the claimant in excess of the means exempted, is at least sufficient to cover the essential needs of the pensioner.

*Article 20*

1. A claimant shall have a right of appeal in any dispute concerning the award of a pension or the rate thereof.

2. The appeal shall lie to an authority other than the authority which gave the decision in the first instance.

*Article 21*

1. Foreigners who are nationals of a Member bound by this Convention shall be entitled to pensions under the same conditions as nationals.

2. Provided that national laws or regulations may make the award of a pension to foreigners conditional upon their having been resident in the territory of the Member for a period which shall not exceed by more than five years the period of residence prescribed for nationals.

*Article 22*

1. The right to a pension may be forfeited or suspended in whole or in part if the person concerned

(a) has been sentenced to imprisonment for a criminal offence;

(b) has obtained or attempted to obtain a pension by fraud; or

(c) has persistently refused to earn his living by work compatible with his strength and capacity.

2. The pension may be suspended in whole or in part while the person concerned is entirely maintained at the public expense.

*Article 23*

Subject to the provisions of paragraph 5 of Article 12, this Convention does not refer to the maintenance of pension rights in the event of residence abroad.

*Article 24*

The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

*Article 25*

This Convention shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

It shall come into force twelve months after the date on which the ratifications of two Members of the International Labour Organization have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

*Article 26*

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

*Article 27*

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of ten years and, thereafter, may denounce this Convention at the expiration of each period of ten years under the terms provided for in this Article.

*Article 28*

At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability

of placing on the Agenda of the Conference the question of its revision in whole or in part.

#### Article 29

Should the Conference adopt a new Convention revising this Convention in whole or in part, then, unless the new Convention otherwise provides.

- (a) the ratification by a Member of the new revising Convention shall, *ipso jure*, involve the immediate denunciation of this Convention, notwithstanding the provisions of Article 27 above, if and when

the new revising Convention shall have come into force;

- (b) as from the date when the new revising Convention comes into force, Convention shall cease to be open to ratification by the Members.

This Convention shall in any case remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

#### Article 30

The French and English texts of this Convention shall both be authentic.

### DRAFT CONVENTION CONCERNING COMPULSORY INVALIDITY INSURANCE FOR PERSONS EMPLOYED IN INDUSTRIAL COMMERCIAL UNDERTAKINGS, IN THE LIBERAL PROFESSIONS, AND FOR OUTWORKERS AND DOMESTIC SERVANTS

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Seventeenth Session on 8 June, 1933, and Having decided upon the adoption of certain proposals with regard to compulsory invalidity insurance which is included in the second item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a Draft International Convention.

adopts, this 30th day of June of the year one thousand nine hundred and thirty-three, the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace.

#### Article 1

Each Member of the International Labour Organization which ratifies this Convention undertakes to set up or maintain a scheme of compulsory invalidity insurance which shall be based on provisions at least equivalent to those contained in this Convention.

#### Article 2

1. The compulsory invalidity insurance scheme shall apply to manual and non-manual workers, including apprentices, employed in industrial or commercial undertakings or in the liberal professions, and to outworkers and domestic servants:

2. Provided that any Member may in its national laws or regulations make such exceptions as it deems necessary in respect of

- (a) workers whose remuneration exceeds a prescribed amount, and, where national laws or regulations do not make this exception general in its application, any non-manual workers engaged in occupations which are ordinarily considered as liberal professions;
- (b) workers who are not paid a money wage;
- (c) young workers under a prescribed age and workers too old to become insured when they first enter employment;

- (d) outworkers whose conditions of work are not of a like nature to those of ordinary wage earners;

- (e) members of the employer's family;

- (f) workers whose employment is of such a nature that, its total duration being necessarily short, they cannot qualify for benefit, and persons engaged solely in occasional or subsidiary employment;

- (g) invalid workers and workers in receipt of an invalidity or old-age pension;

- (h) retired public officials employed for remuneration and persons possessing a private income, where the retirement pension or private income is at least equal to the invalidity pension provided by national laws or regulations;

- (i) workers who, during their studies, give lessons, or work for remuneration in preparation for an occupation corresponding to such studies;

- (j) domestic servants employed in the households of agricultural employers.

3. Provided also that there may be exempted from liability to insurance persons who, by virtue of any law, regulations or special scheme, are or will become entitled to invalidity benefits at least equivalent on the whole to those provided for in this Convention.

4. This Convention does not apply to seamen and sea fishermen.

#### Article 3

National laws or regulations shall, under conditions to be determined by them, either entitle persons formerly compulsorily insured who are not in receipt of a pension to continue their insurance voluntarily or entitle such persons to maintain their rights by the periodical payment of a fee for the purpose, unless the said rights are automatically maintained, or, in the case of married women, the husband, if not liable to compulsory insurance, is permitted to insure voluntarily and thereby to qualify his wife for an old-age or widow's pension.

#### Article 4

1. An insured person who becomes generally incapacitated for work and thereby unable to earn an appreciable remuneration shall be entitled to an invalidity pension:

2. Provided that national laws or regulations which secure to insured persons medical treatment and attendance throughout invalidity, and,

if invalidity terminates in death, secure pensions at the full rate to widows, without any condition as to age or invalidity, and to orphans, may make the award of an invalidity pension conditional upon the insured person's being unable to perform remunerative work.

3. In the case of special schemes for non-manual workers, an insured person who suffers from incapacity which renders him unable to earn an appreciable remuneration in the occupation in which he was ordinarily engaged or in a similar occupation shall be entitled to an invalidity pension.

#### Article 5

1. Notwithstanding the provisions of Article 6, the right to a pension may be made conditional upon the completion of a qualifying period, which may involve the payment of a minimum number of contributions since entry into insurance and during a prescribed period immediately preceding the happening of the event insured against.

2. The duration of the qualifying period shall not exceed 60 contribution months, 250 contribution weeks, or 1,500 contribution days.

3. Where the completion of the qualifying period involves the payment of a prescribed number of contributions during a prescribed period immediately preceding the happening of the event insured against, periods for which benefit has been paid in respect of temporary incapacity for work or of unemployment shall be reckoned as contribution periods to such extent and under such conditions as may be determined by national laws or regulations.

#### Article 6

1. An insured person who ceases to be liable to insurance without being entitled to a benefit representing a return for the contributions credited to his account shall retain his rights in respect of these contributions:

2. Provided that national laws or regulations may terminate rights in respect of contributions on the expiry of a term which shall be reckoned from the date when the insured person so ceased to be liable to insurance and which shall be either variable or fixed:

(a) where the term is variable, it shall not be less than one-third (less the periods for which contributions have not been credited) of the total of the periods for which contributions have been credited since entry into insurance;

(b) where the term is fixed, it shall in no case be less than eighteen months, and rights in respect of contributions may be terminated on the expiry of the term, unless, in the course thereof, a minimum number of contributions prescribed by national laws regulation has been credited to the account of the insured person in virtue of either compulsory or voluntarily continued insurance.

#### Article 7

1. The pension shall, whether or not dependent on the time spent in insurance, be a fixed sum or a percentage of the remuneration taken into account for insurance purposes, or vary with the amount of the contributions paid.

2. Where the pension varies with the time spent in insurance, and its award is made

conditional upon the completion by the insured person of a qualifying period, the pension shall, unless a minimum rate is guaranteed, include a fixed sum or fixed portion not dependent on the time spent in insurance.

3. Where contributions are graduated according to remuneration, the remuneration taken into account for this purpose shall also be taken into account for the purpose of computing the pension, whether or not the pension varies with the time spent in insurance.

#### Article 8

Insurance institutions shall be authorized, under conditions which shall be determined by national laws or regulations, to grant benefits in kind for the purpose of preventing, postponing, alleviating or curing invalidity to persons who are in receipt of or may be entitled to claim a pension on the ground of invalidity.

#### Article 9

1. The right to benefits may be forfeited or suspended in whole or in part if the person concerned

(a) has brought about his invalidity by a criminal offence or wilful misconduct; or

(b) has acted fraudulently towards the insurance institution.

2. The pension may be suspended in whole or in part while the person concerned

(a) is entirely maintained at the public expense or by a social insurance institution;

(b) refuses without valid reason to comply with the doctor's orders or the instructions relating to the conduct of invalids, or voluntarily and without authorization removes himself from the supervision of the insurance institution;

(c) is in receipt of another periodical cash benefit payable by virtue of any law or regulations concerning compulsory social insurance, pensions, or workmen's compensation for accidents or occupational diseases; or

(d) is in employment involving compulsory insurance, or, in the case of special schemes for non-manual workers, is in receipt of remuneration exceeding a prescribed rate.

#### Article 10

1. The insured persons and their employers shall contribute to the financial resources of the insurance scheme.

2. National laws or regulations may exempt from liability to pay contributions:

(a) apprentices and young workers under a prescribed age;

(b) workers who are not paid a money wage or whose wages are very low.

3. Contributions from employers may be dispensed with under laws or regulations concerning schemes of national insurance not restricted in scope to employed persons.

4. The public authorities shall contribute to the financial resources or to the benefits of insurance schemes covering employed persons in general or manual workers.

5. National laws or regulations which, at the time of the adoption of this Convention, do not require contributions from insured per-

sons may continue not to require such contributions.

#### *Article 11*

1. The insurance scheme shall be administered by institutions founded by the public authorities and not conducted with a view to profit, or by State insurance funds;

2. Provided that national laws or regulations may also entrust its administration to institutions founded on the initiative of the parties concerned or of their organizations and duly approved by the public authorities.

3. The funds of insurance institutions and State insurance funds shall be administered separately from the public funds.

4. Representatives of the insured persons shall participate in the management of insurance institutions under conditions to be determined by national laws or regulations, which may likewise decide as to the participation of representatives of employers and of the public authorities.

5. Self-governing insurance institutions shall be under the administrative and financial supervision of the public authorities.

#### *Article 12*

1. The insured person or his legal representatives shall have a right of appeal in any dispute concerning benefits.

2. Such disputes shall be referred to special tribunals which shall include judges, whether professional or not, who are specially cognisant of the purpose of insurance and the needs of insured persons or are assisted by assessors chosen as representative of insured persons and employers respectively.

3. In any dispute concerning liability to insurance or the rate of contribution, the employed person and, in the case of schemes providing for an employer's contribution, his employer shall have a right of appeal.

#### *Article 13*

1. Foreign employed persons shall be liable to insurance and to the payment of contributions under the same conditions as nationals.

2. Foreign insured persons and their dependants shall be entitled under the same conditions as nationals to the benefits derived from the contributions credited to their account.

3. Foreign insured persons and their dependants shall, if nationals of a Member which is bound by this Convention and the laws or regulations of which therefore provide for a State subsidy towards the financial resources or benefits of the insurance scheme in conformity with Article 10, also be entitled to any subsidy or supplement to or fraction of a pension which is payable out of public funds.

4. Provided that national laws or regulations may restrict to nationals the right to any subsidy or supplement to or fraction of a pension which is payable out of public funds and granted solely to insured persons who have exceeded a prescribed age at the date when the laws or regulations providing for compulsory insurance come into force.

5. Any restrictions which may apply in the event of residence abroad shall only apply to pensioners and their dependants who are nationals of any Member bound by this Convention and reside in the territory of any Member bound thereby to the extent to which

they apply to nationals of the country in which the pension has been acquired: Provided that any subsidy or supplement to or fraction of a pension which is payable out of public funds may be withheld.

#### *Article 14*

1. The insurance of employed persons shall be governed by the law applicable at their place of employment.

2. In the interest of continuity of insurance, exceptions may be made to this rule by agreement between the Members concerned.

#### *Article 15*

Any Member may prescribe special provisions for frontier workers whose place of employment is in its territory and whose place of residence is abroad.

#### *Article 16*

In countries which, at the time when this Convention first comes into force, have no laws or regulations providing for compulsory invalidity insurance, an existing non-contributory pension scheme which guarantees an individual right to a pension under the conditions defined in Articles 17 to 23 hereinafter shall be deemed to satisfy the requirements of this Convention.

#### *Article 17*

A person who becomes generally incapacitated for work and thereby unable to earn an appreciable remuneration shall be entitled to a pension.

#### *Article 18*

The right to a pension may be made conditional upon the claimant's having been resident in the territory of the Member for a period immediately preceding the making of the claim. This period shall be determined by national laws or regulations, but shall not exceed five years.

#### *Article 19*

1. A claimant shall be entitled to a pension if the annual value of his means does not exceed a limit which shall be fixed by national laws or regulations with due regard to the minimum cost of living.

2. Means up to a level which shall be determined by national laws or regulations shall be exempted for the purpose of the assessment of means.

#### *Article 20*

The rate of pension shall be an amount which, together with any means of the claimant in excess of the means exempted, is at least sufficient to cover the essential needs of the pensioner.

#### *Article 21*

1. A claimant shall have a right of appeal in any dispute concerning the award of a pension or the rate thereof.

2. The appeal shall lie to an authority other than the authority which gave the decision in the first instance.

#### *Article 22*

1. Foreigners who are nationals of a Member bound by this Convention shall be entitled to pensions under the same conditions as nationals:

2. Provided that national laws or regulations may make the award of a pension to foreigners conditional upon their having been resident in the territory of the Member for a period which shall not exceed by more than five years the period of residence prescribed for nationals.

#### Article 23

1. The right to a pension may be forfeited or suspended in whole or in part if the person concerned

- (a) has brought about his invalidity by a criminal offence or wilful misconduct;
- (b) has obtained or attempted to obtain a pension by fraud;
- (c) has been sentenced to imprisonment for a criminal offence; or
- (d) has persistently refused to earn his living by work compatible with his strength and capacity.

2. The pension may be suspended in whole or in part while the person concerned is entirely maintained at the public expense.

#### Article 24

Subject to the provisions of paragraph 5 of Article 13, this Convention does not refer to the maintenance of pension rights in the event of residence abroad.

#### Article 25

The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

#### Article 26

This Convention shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

It shall come into force twelve months after the date on which the ratifications of two Members of the International Labour Organization have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

#### Article 27

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify

them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

#### Article 28

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of ten years and, thereafter, may denounce this Convention at the expiration of each period of ten years under the terms provided for in this Article.

#### Article 29
